**4th SENTINEL-2**

**VALIDATION TEAM MEETING**

15–17 March 2021 | Virtual Event

**Comparison of Masks of Fmask5, ATCOR and Sen2Cor**

# Comparison of Masks of Fmask5, ATCOR and Sen2Cor

Viktoria Zekoll<sup>1</sup>, Rudolf Richter<sup>1</sup> and Bringfried Pflug<sup>2</sup>

<sup>1</sup>DLR, German Aerospace Center, D-82234 Wessling, Germany

<sup>2</sup>DLR, German Aerospace Center, D-12489 Berlin, Germany

Fmask 5: pythonfmask 0.5.4 (2019)<sup>1</sup>

Sen2Cor: 2.8 (2019)<sup>2</sup>

ATCOR: 9.3.0 (2019)<sup>3</sup>

Note: in order to make the comparison as fair as possible, only the original image data without external classification maps was used

1. Frantz, D.; Hass, E.; Uhl, A.; Stoffels, J; Hill, J. Improvement of the Fmask algorithm for Sentinel-2 images: separating clouds from bright surfaces based on parallax effects. Remote Sens. Environ. 2018, 215, 471–481.

2. Louis, J. Sentinel 2 MSI - Level 2A Product Definition. Issue 4.4. 2016-08-12. Available online: <http://step.esa.int/thirdparties/sen2cor/2.8.0/docs/S2-PDGS-MPC-L2A-PDD-V14.5-v4.7.pdf> (accessed March 1, 2021)

3. Richter, R.; Schläpfer, D. ATCOR Theoretical Background Document, DLR Report DLR-IB 564-03/2019, German Aerospace Center (DLR): Wessling, Germany, 2019. Available online: <https://www.rese-apps.com/software/atcor/manual-papers.html> , (accessed Feb. 26, 2021).

- Common features:
  - spectral thresholds of TOA reflectance, band ratios, NDVI, NDSI ...
  - cloud mask + geometric criteria to calculate cloud shadow
- Differences:
  - thresholds are set differently
  - criteria to define potential shadow
  - buffering of cloud, buffering of "holes" in cloud / cloud shadow

For details refer to the publications on previous slide.

- This study was performed for 20 test sites distributed over all continents (flat, mountains, different seasons & cloud covers) .
- Results for 5 selected sites are presented here.

# 1. Arcachon – 2017.02.18

GRANULE:

L1C\_T30TXQ\_A008671\_20170218T110125

L2A\_T30TXQ\_A008671\_20170218T110125

Zenith angle =  $58.27^\circ$

Azimuth angle =  $159.92^\circ$

## ATCOR +

- Robust classification
- Cloud mask: accurate (urban/arid/desert area)
- Accurate water mask (shadow over water: shadow preference)
- Adequate shadow mask

## ATCOR -

- Conservative mask of water cloud (underestimates clouds)
- Conservative cloud shadow mask (underestimates cloud shadow)

## Sen2Cor +

- Robust classification for all scenes
- Cloud mask: accurate in many cases (medium brightness scenes)

## Sen2Cor -

- Cloud mask fails in urban areas and arid/desert areas cannot distinguish between bright ground object and cloud
- Cloud shadow mask consistently underestimates shadow

## Fmask +

- Cloud mask is dilated to increase accuracy of clear pixels
- Cloud mask is adequate in desert/arid regions
- High User Accuracy for semitransparent cloud, water, topog. shadow

## Fmask -

- Urban structures are usually classified as cloud
- Strange circular or elliptical blobs of cloud mask often appear
- Classifies bright water as snow/ice and often misclassifies snow/ice as cloud
