--	--

100 million

Seagrasses provide coastal protection to more than 100 million people.

Seagrasses reduce wave strength and protect the coast from erosion.

25-50%

Reduction of Tidal Height

159

The countries which have seagrasses in their coastal extent.

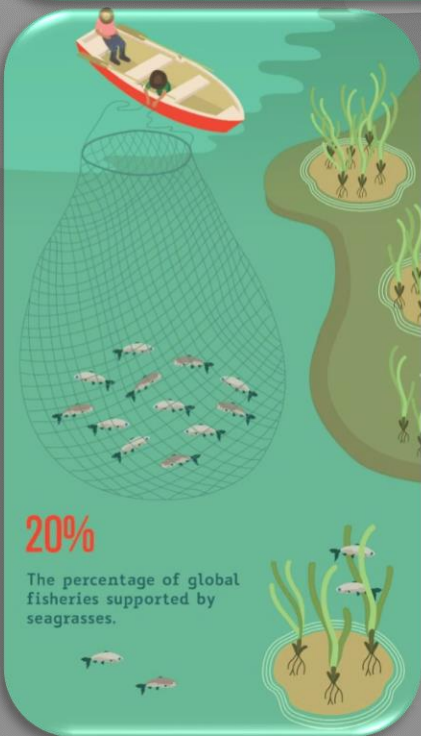

350,000 km²

The approximate total global seagrass extent, almost the size of Germany.

20%

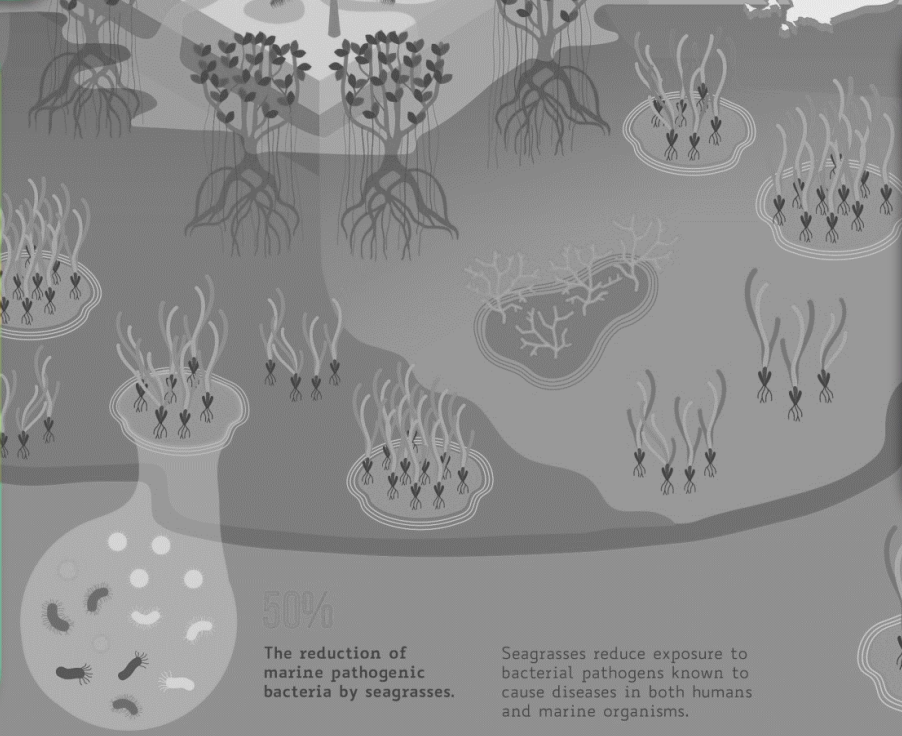

The percentage of global fisheries supported by seagrasses.

50%

The reduction of marine pathogenic bacteria by seagrasses.

Seagrasses reduce exposure to bacterial pathogens known to cause diseases in both humans and marine organisms.

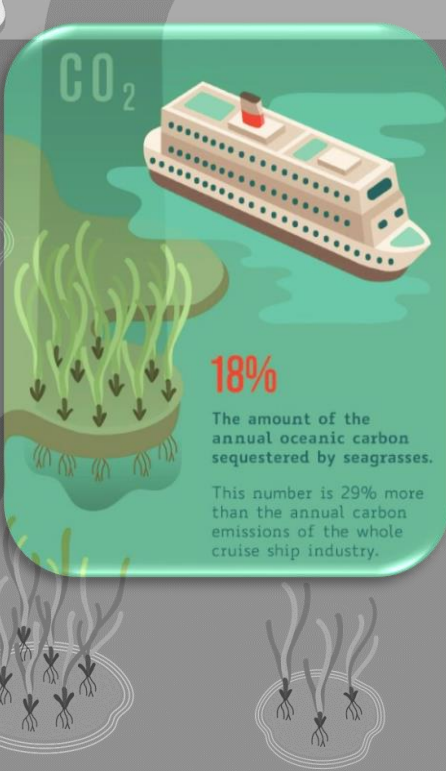

CO₂

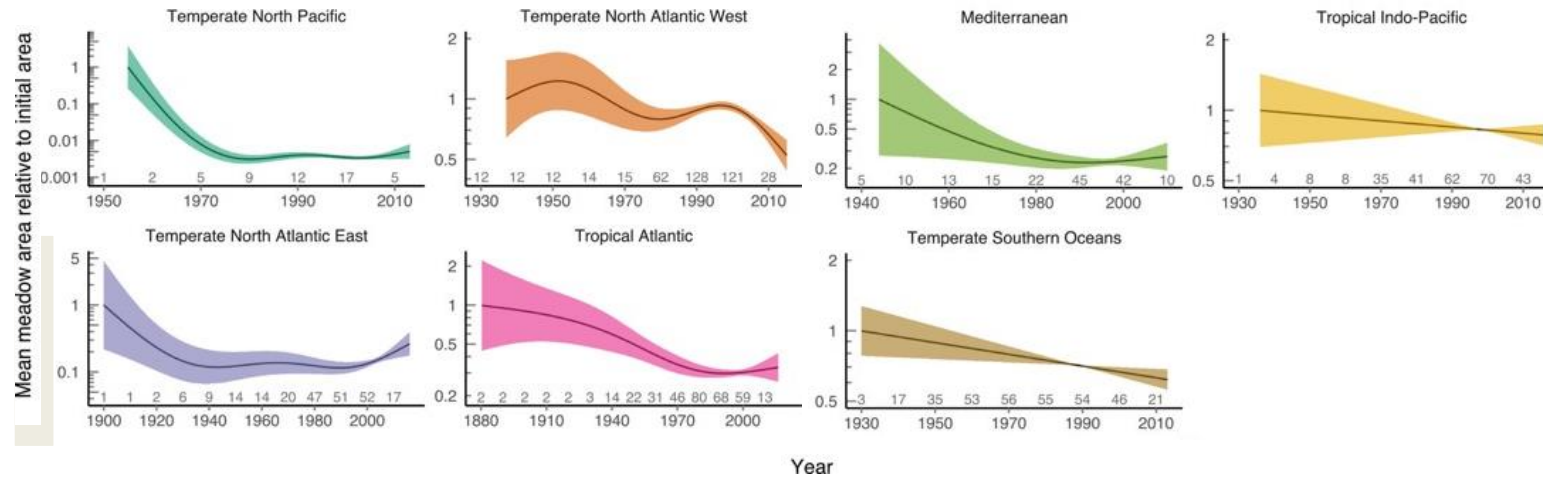

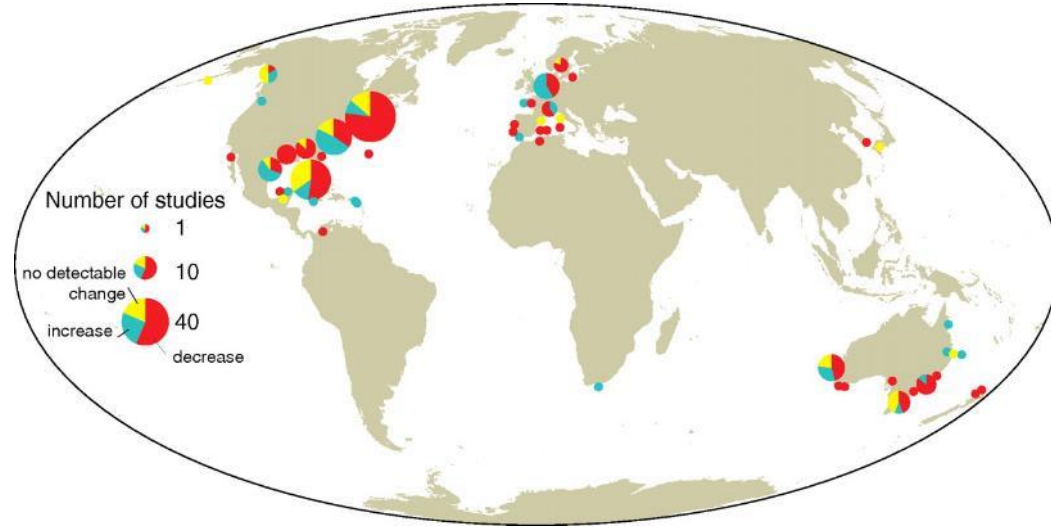

18%

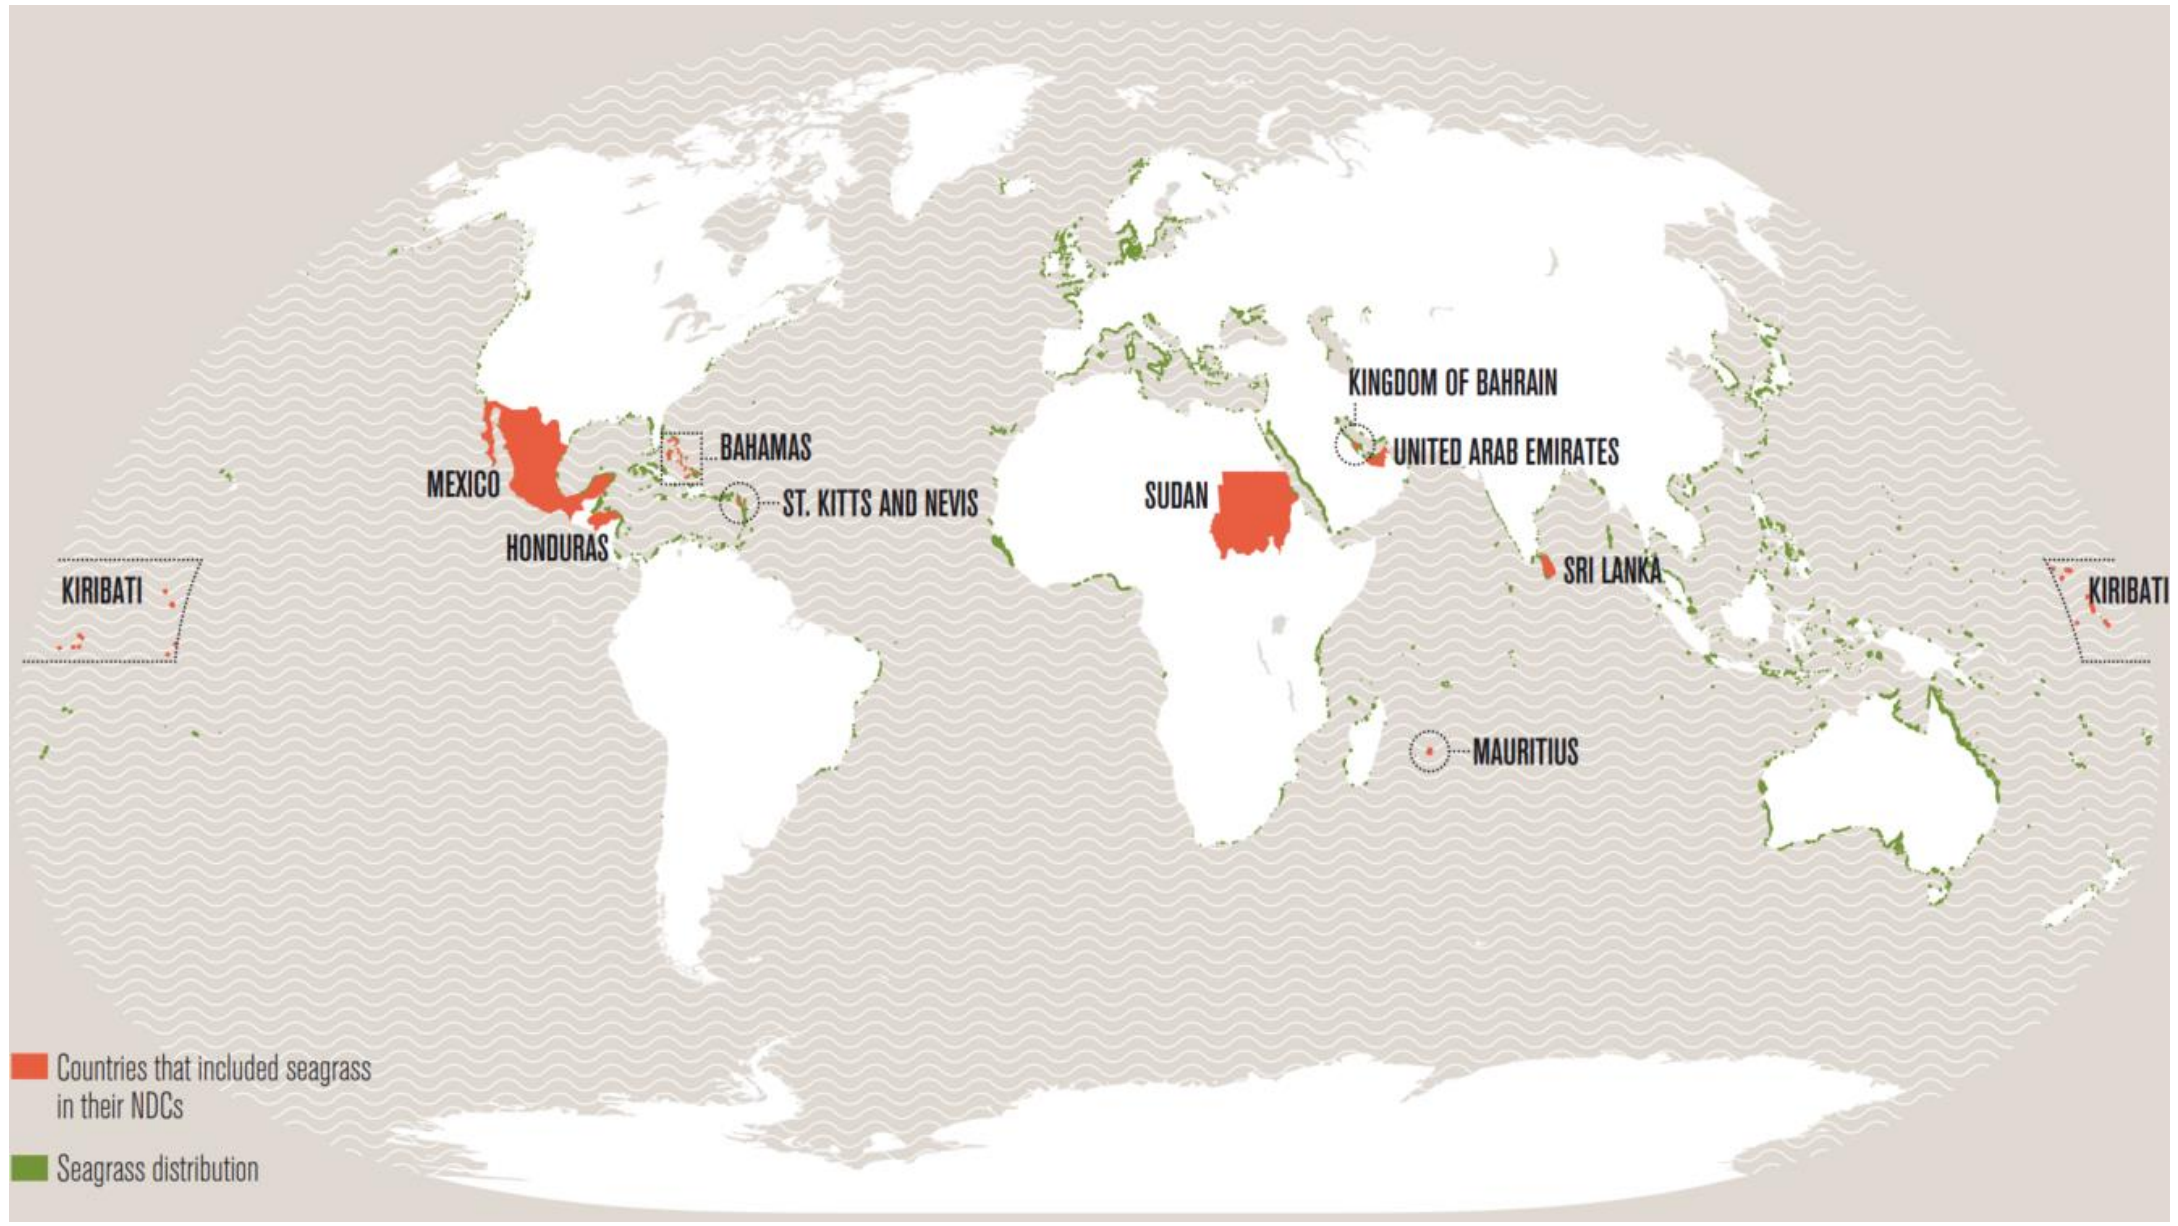

The amount of the annual oceanic carbon sequestered by seagrasses.

This number is 29% more than the annual carbon emissions of the whole cruise ship industry.

Global seagrass loss over the past century

Earth Observation For Coastal EA: A Match Made In Heaven For Coastal Ecosystems

Spatially-explicit seagrass ecosystem extent

Spatially-explicit seagrass ecosystem condition & services

Per-pixel probabilities & uncertainties

Quantitative EO successes

28

Mapped temperate and tropical countries

306,000 km²

Mapped nearshore shallow seabed area at 5/10 m

76,000 km²

Mapped spatially-explicit seagrass extent

40%

Percent mapped of best-available global extent

Overview of our seagrass mapping work

Region	Satellite Imagery	No. of images used	Date Range	Reference Data	Model	Overall accuracy
Mediterranean	Sentinel-2	279,186	Jun 2015 – Dec 2019	Multiclass	Random Forest Soft Probability	72,0%
East Africa		16,453	Dec 2018 – Apr 2020	Binary		84,3%
Bahamas		18,881	Mar 2017 – Mar 2021	Multiclass	Random Forest Soft Probability (Min, Max)	71,0 – 76,5%
Seychelles		Biannual composites	2015 – 2020	Multiclass		(Work in progress)
Indonesia	Planetscope NICFI	Biannual composites/ Monthly composites	2015 – 2021	Multiclass	Random Forest (Work in progress)	(Work in progress)

Pan-Mediterranean Seagrass mapping

Novel

- Expansion from a national scale to a regional scale
- Per-pixel seagrass probability
- Paper: <https://www.frontiersin.org/articles/10.3389/fmars.2022.871799/full>
- App: <https://leechengfa.users.earthengine.app/view/panmediterranean-app>

GLOBAL SEAGRASS WATCH

Bahamian Seagrass mapping

Novel

- Normalisation of training and validation data
- Minimum and Maximum extent of seagrass

- Paper: Accepted, in press
- App:
<https://ablume.users.earthengine.app/view/bahamian-seagrass-extent>

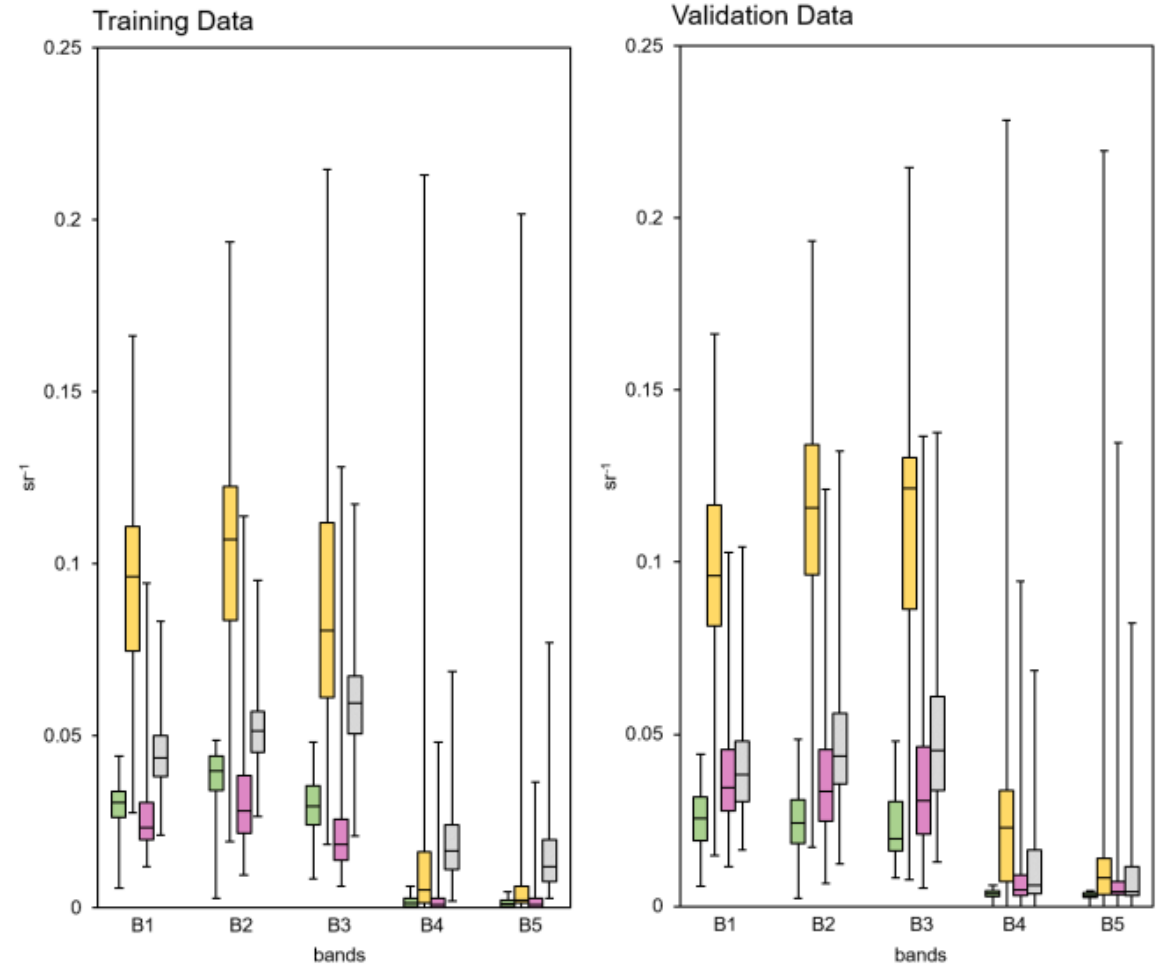

Bahamian Seagrass mapping

Novel

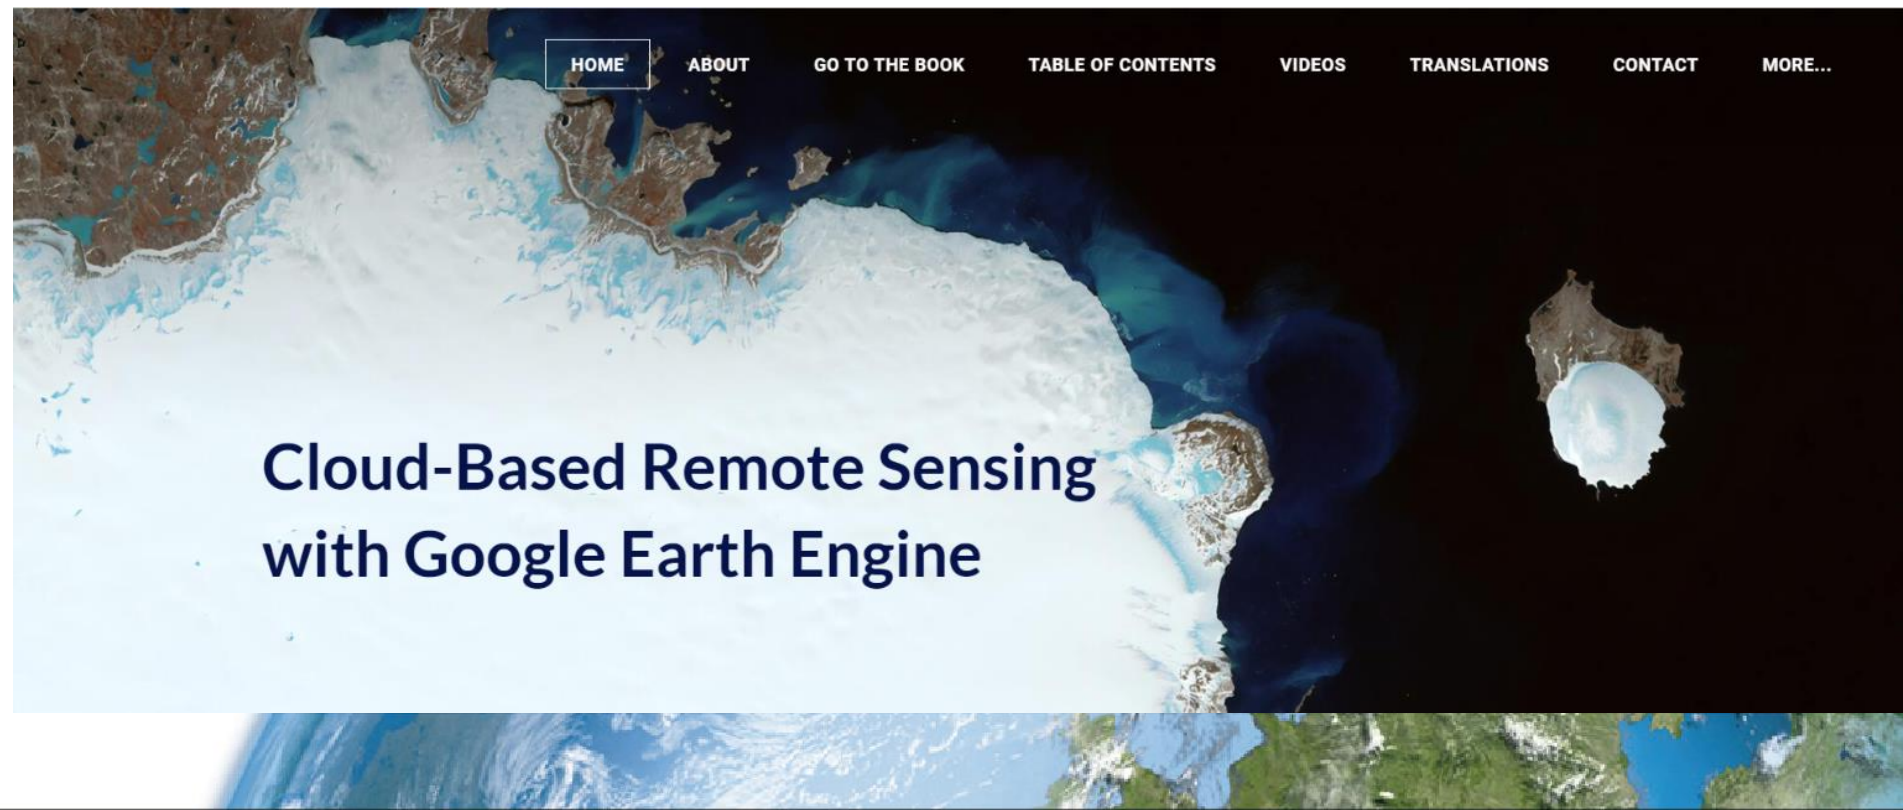

- Normalisation of training and validation data
- Minimum and Maximum extent of seagrass

- Paper: Accepted, in press
- App:
<https://ablume.users.earthengine.app/view/bahamian-seagrass-extent>

Coding Framework

- Earth Engine Fundamentals and Application
 - Chapter A2.2: Benthic Habitats
 - <https://www.eefabook.org/>
 - Includes contributions by Spyros Christofilakos, a member of the Global Seagrass Watch team

Present Challenges to be surmounted

Accurate deep seagrass ecosystem extent

Remaining challenges in scalable multi-temporal analytics

Problematic tracking of progress of relevant Multilateral Environmental Agreements (NDCs, SDGs, MPAs, CBD)

Lack of big satellite data fusion and fit-for-purpose reference seagrass extent data

Lack of nation/region-specific in-situ physical and thematic accounts

Into the Future

- Holistic **systems-level approach** by fusing Earth Observation, Ecosystem Accounting and biophysical models
- Collaboration with scientists for **integration** of new big **field** reference **data**
- Collaboration with policy makers to streamline **spatially explicit and uncertainty** aware coastal conservation and restoration
- Collaboration with governments, industry and NGOs to improve funding for long-term, **holistic ecosystem service accounting**, reliant on ecology and translated into economic units and measurable targets

Thank you for your attention
