

Institut für Materialphysik im Weltraum

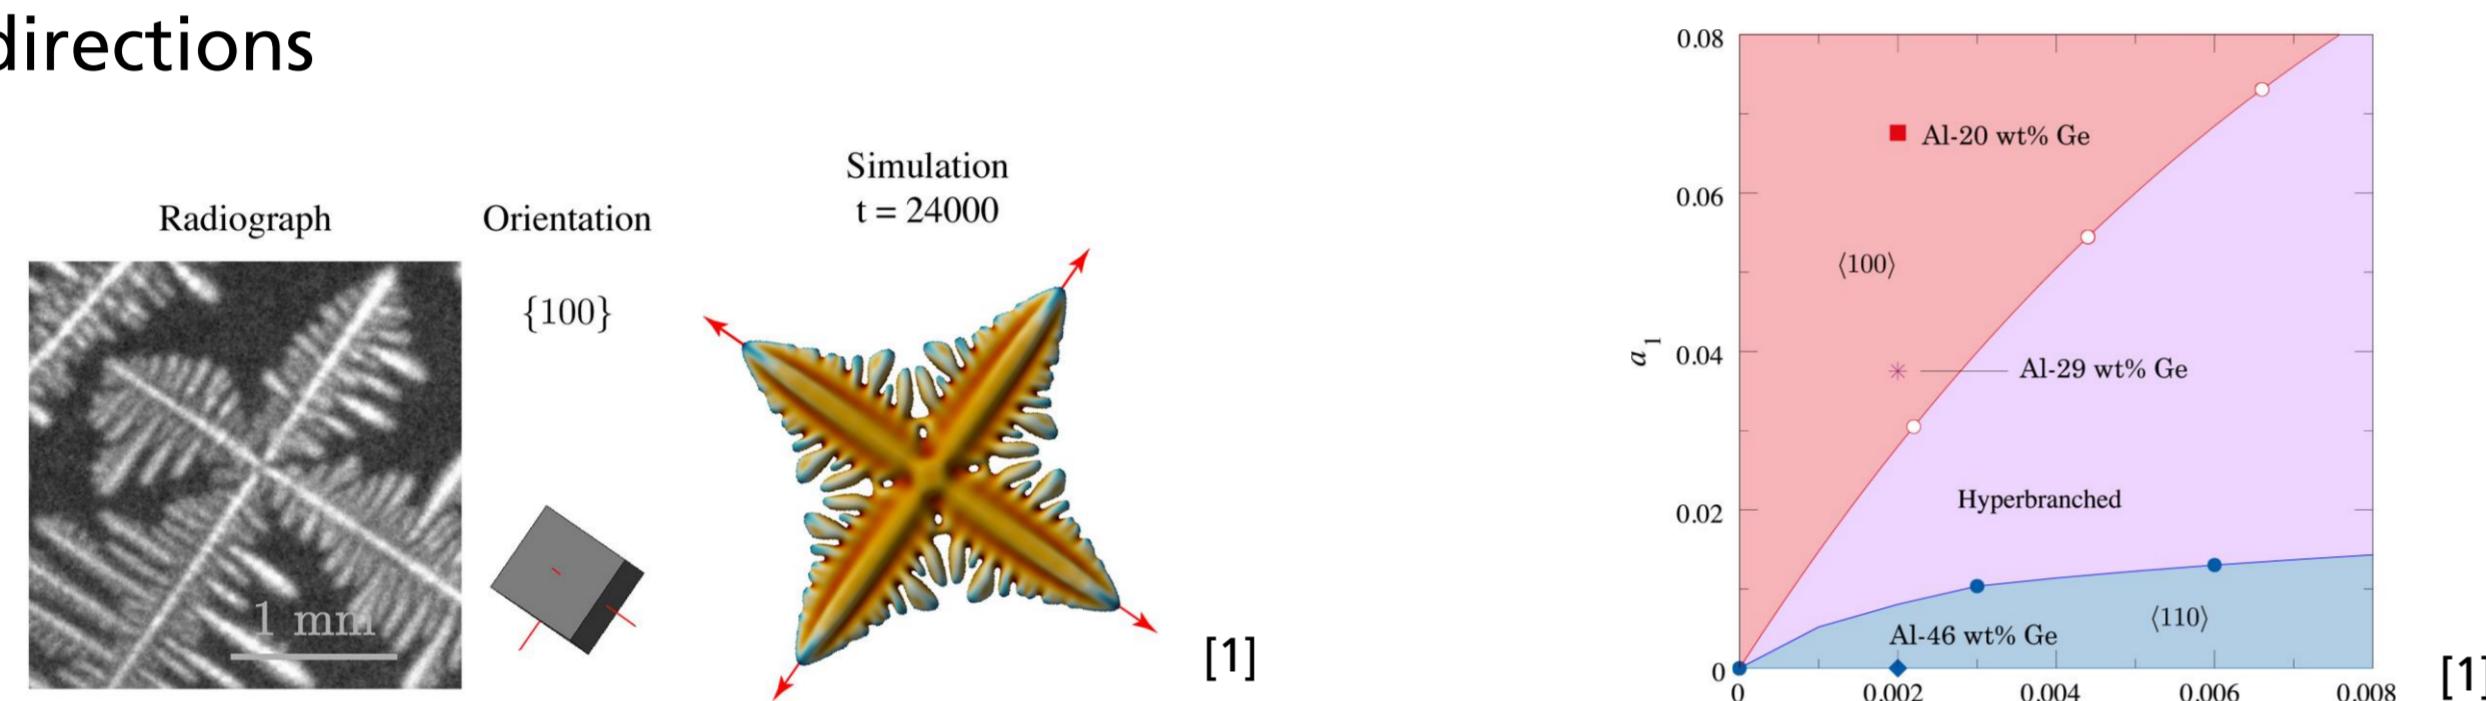

In-situ X-ray investigations of the growth orientations of metal alloys and the role of interface anisotropy

N. Bellenbaum (nils.bellenbaum@dlr.de), M. Becker, F. Kargl

Institut für Materialphysik im Weltraum, Deutsches Zentrum für Luft- und Raumfahrt, 51170 Köln, Germany

Motivation

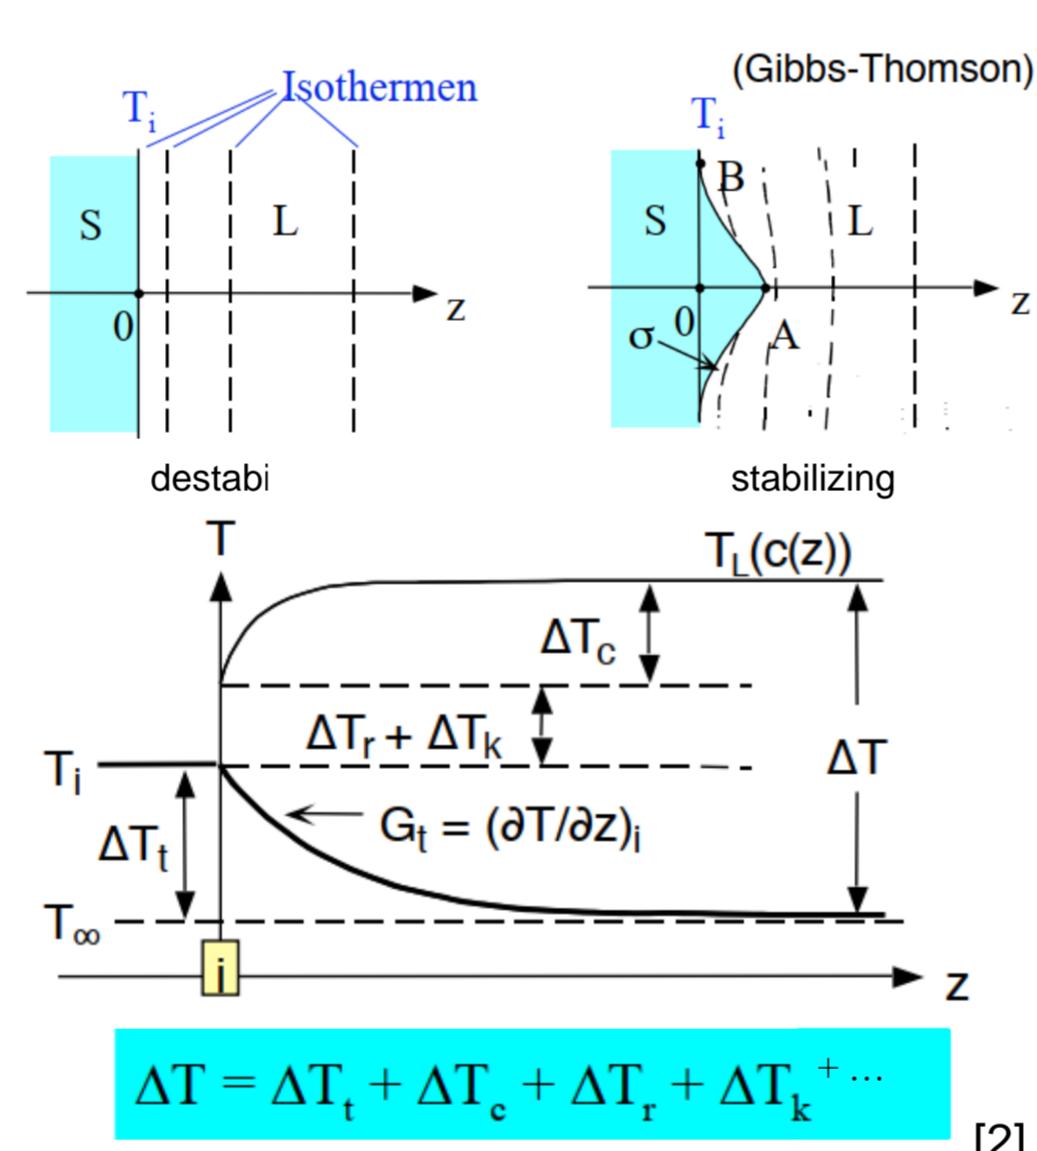

- Investigation of AlGe alloys by Becker et al. using in-situ X-radiography imaging, phase field simulation and post-mortem electron backscatter diffraction
- In situ tomoscopy enables examination of the dendrite in all directions

Dendrites

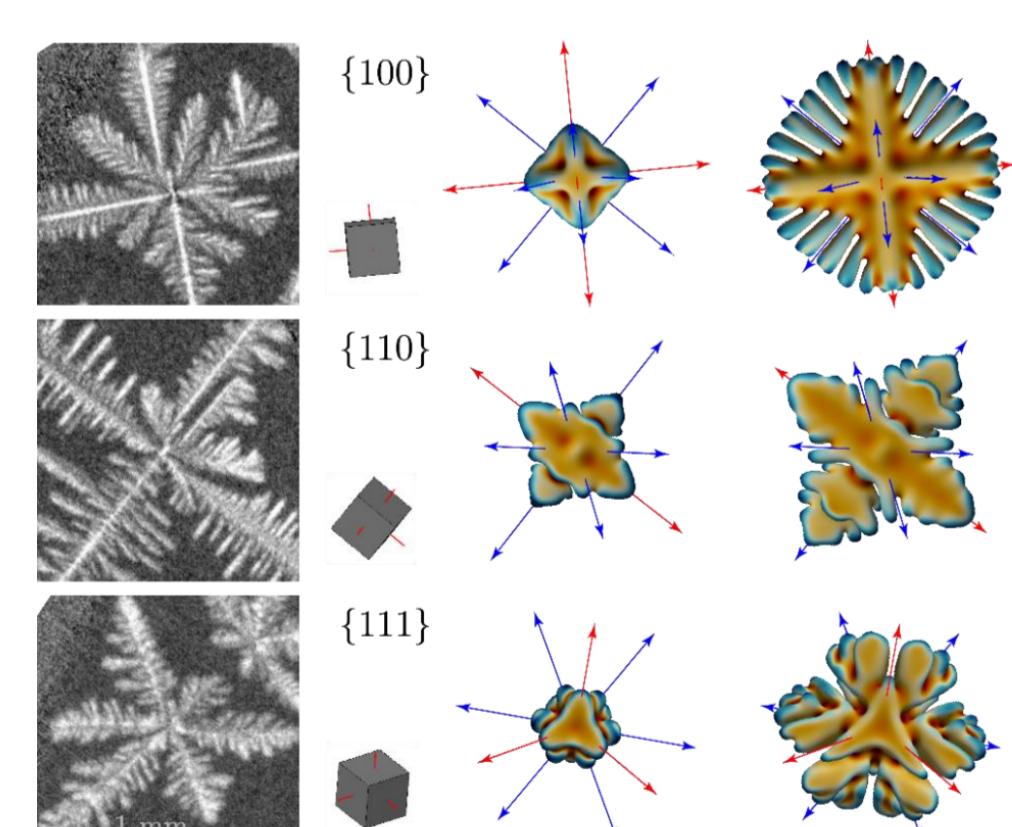

Influence on dendritic growth:

- Diffusion of heat and material
- Atomic kinetics at the interface
- Shape and curvature of the interface
- Interface energy
- Anisotropy
- Alloy composition
- Growth of the side arms
- ...

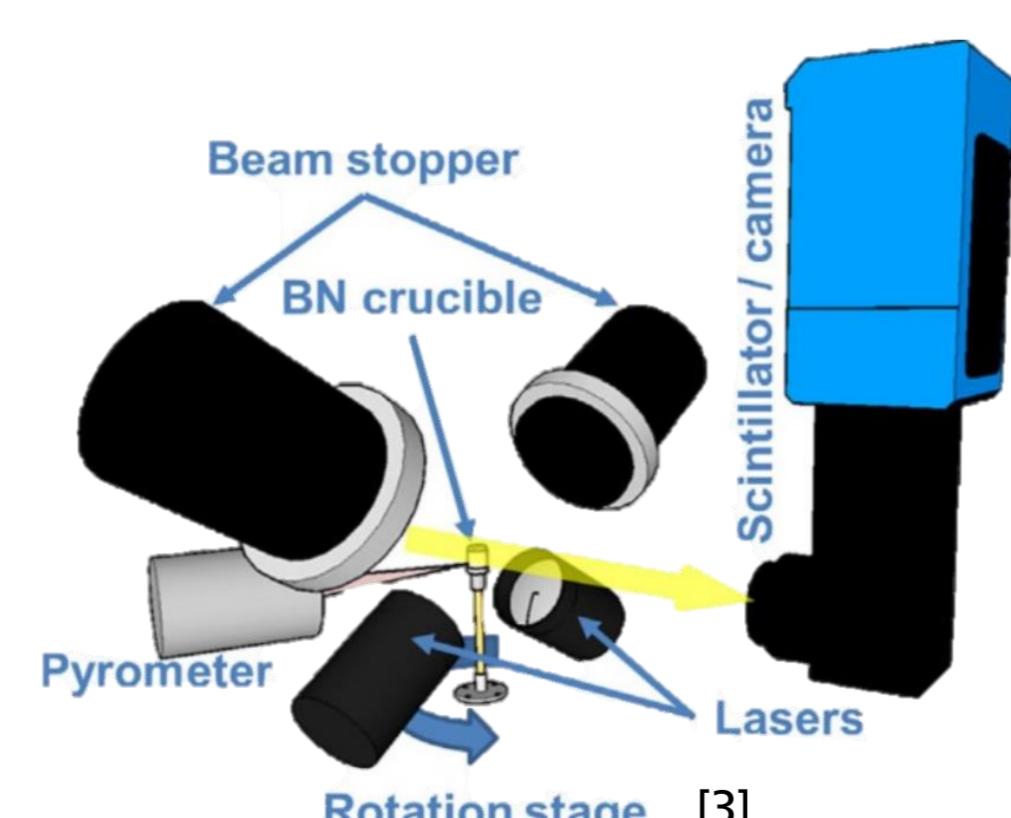

Dendrite descriptive parameters:

- DAS (dendrite arm spacing)
- Curvature
- Shape
- Peclet – number
- Solidification velocity
- Alloy composition
- Crystallographic direction
- Angle of the dendritic arms
- Temperature
-

In-situ X-ray investigations using synchrotron

- Energy range: 8-45 keV
- 20, 10, 1 Tomograms per second (Tps)
- Laser-based heating
- Boron nitride crucible
- Different Alloys
 - AlGe 5%-45% in 5% steps and 53%
 - AlCu 7%, 25%, 33%
 - AlCe 4%, 12%, 20%
 - AlSi18%Cu10%
- Voxel size of 2.75 μm

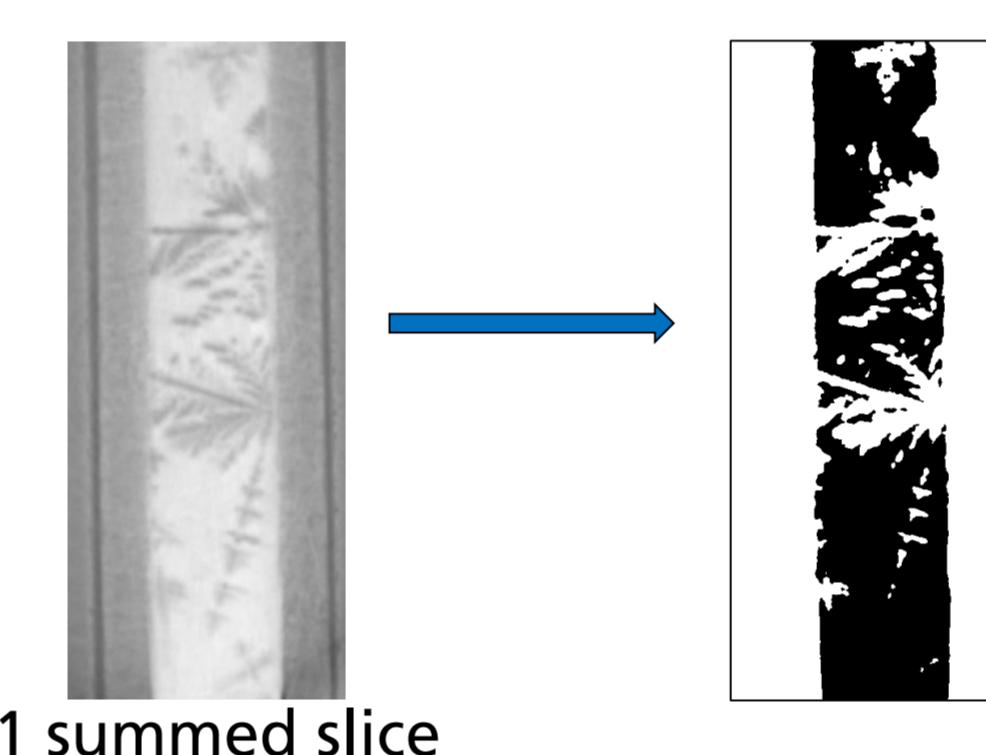

Analysis of the data

First aim: Extraction of the dendrites

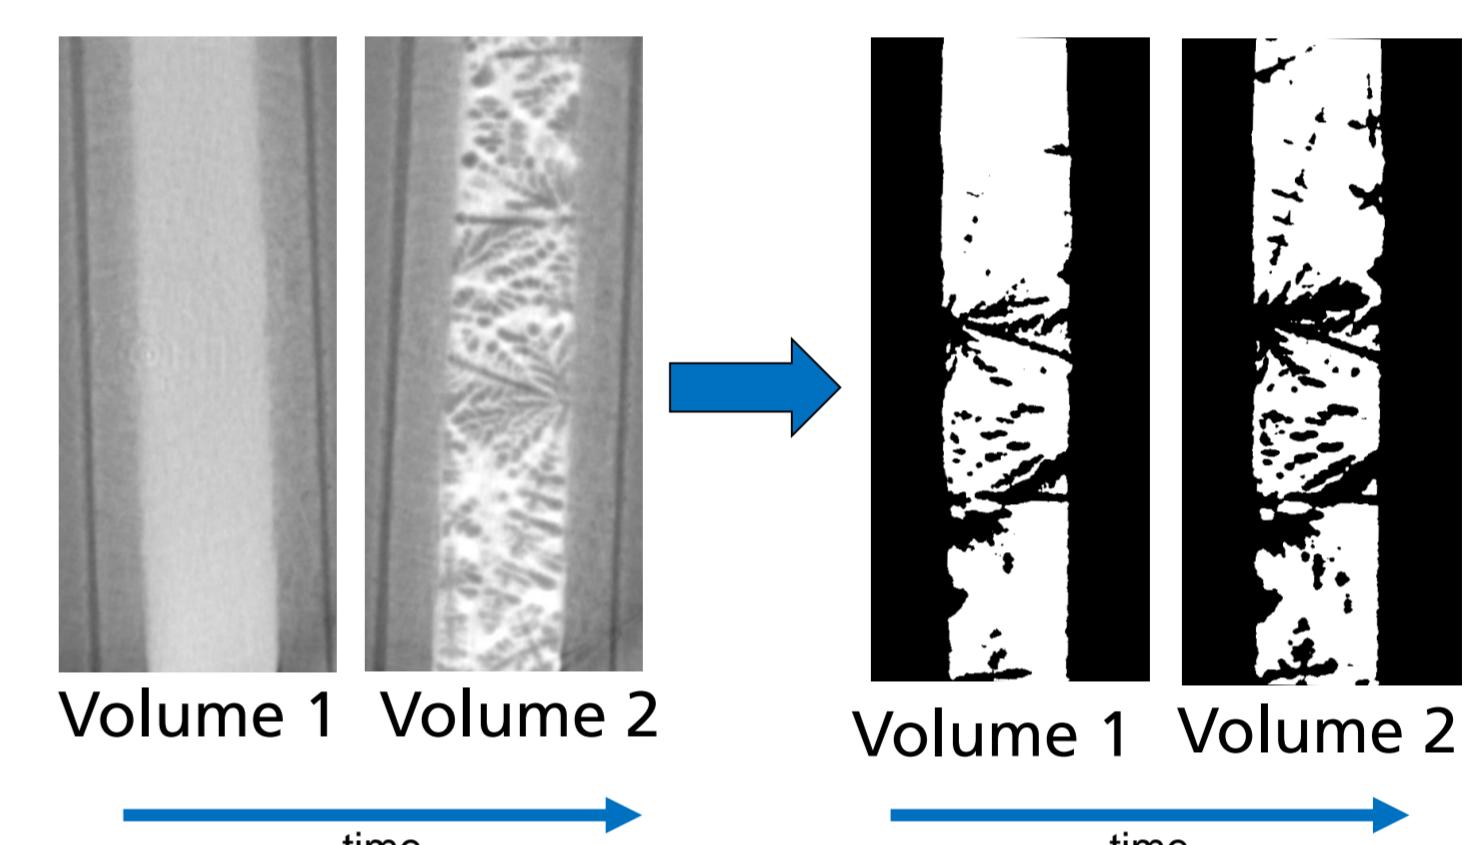

- 1 Tomography \approx 553 Slices
- 20 Tomograms per second

→ Automation needed

1. Step: Increasing the contrast → Summation of three time steps

2. Step: Correct the angle - automated Problem:

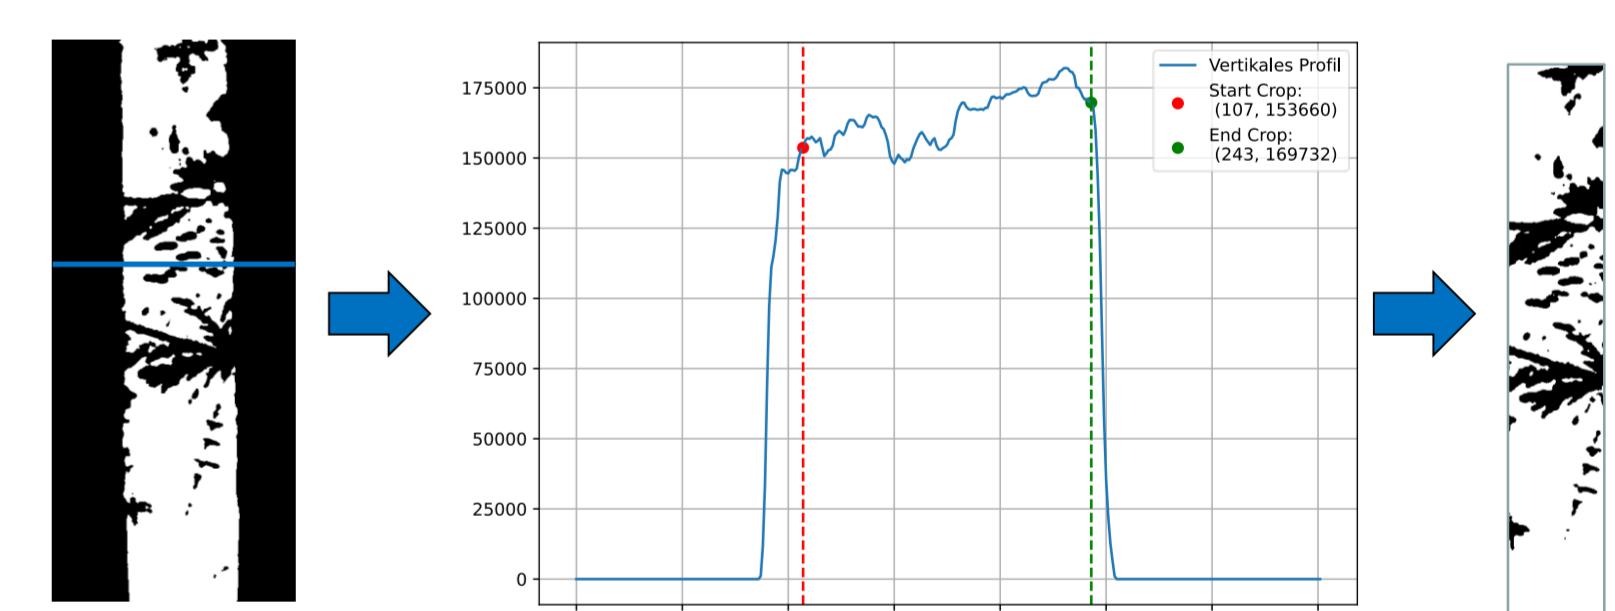

→ Rotation over time:

- Different image processing steps:
e.g. Gauß-Filter; Histogram equalization;

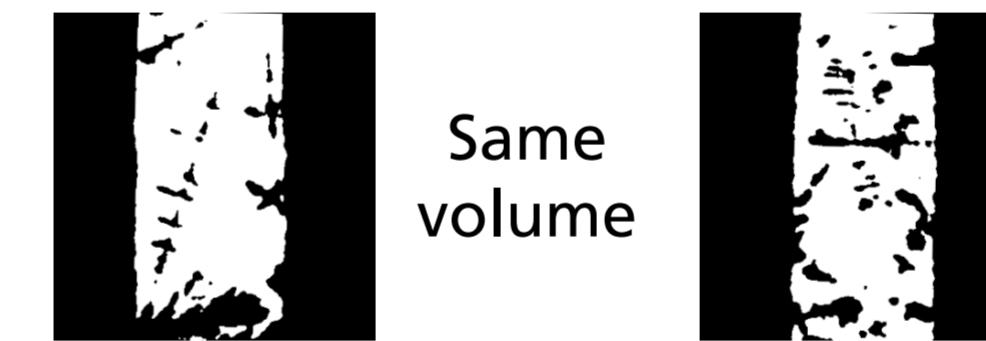

Solution:

→ Automated crop of the sample needed

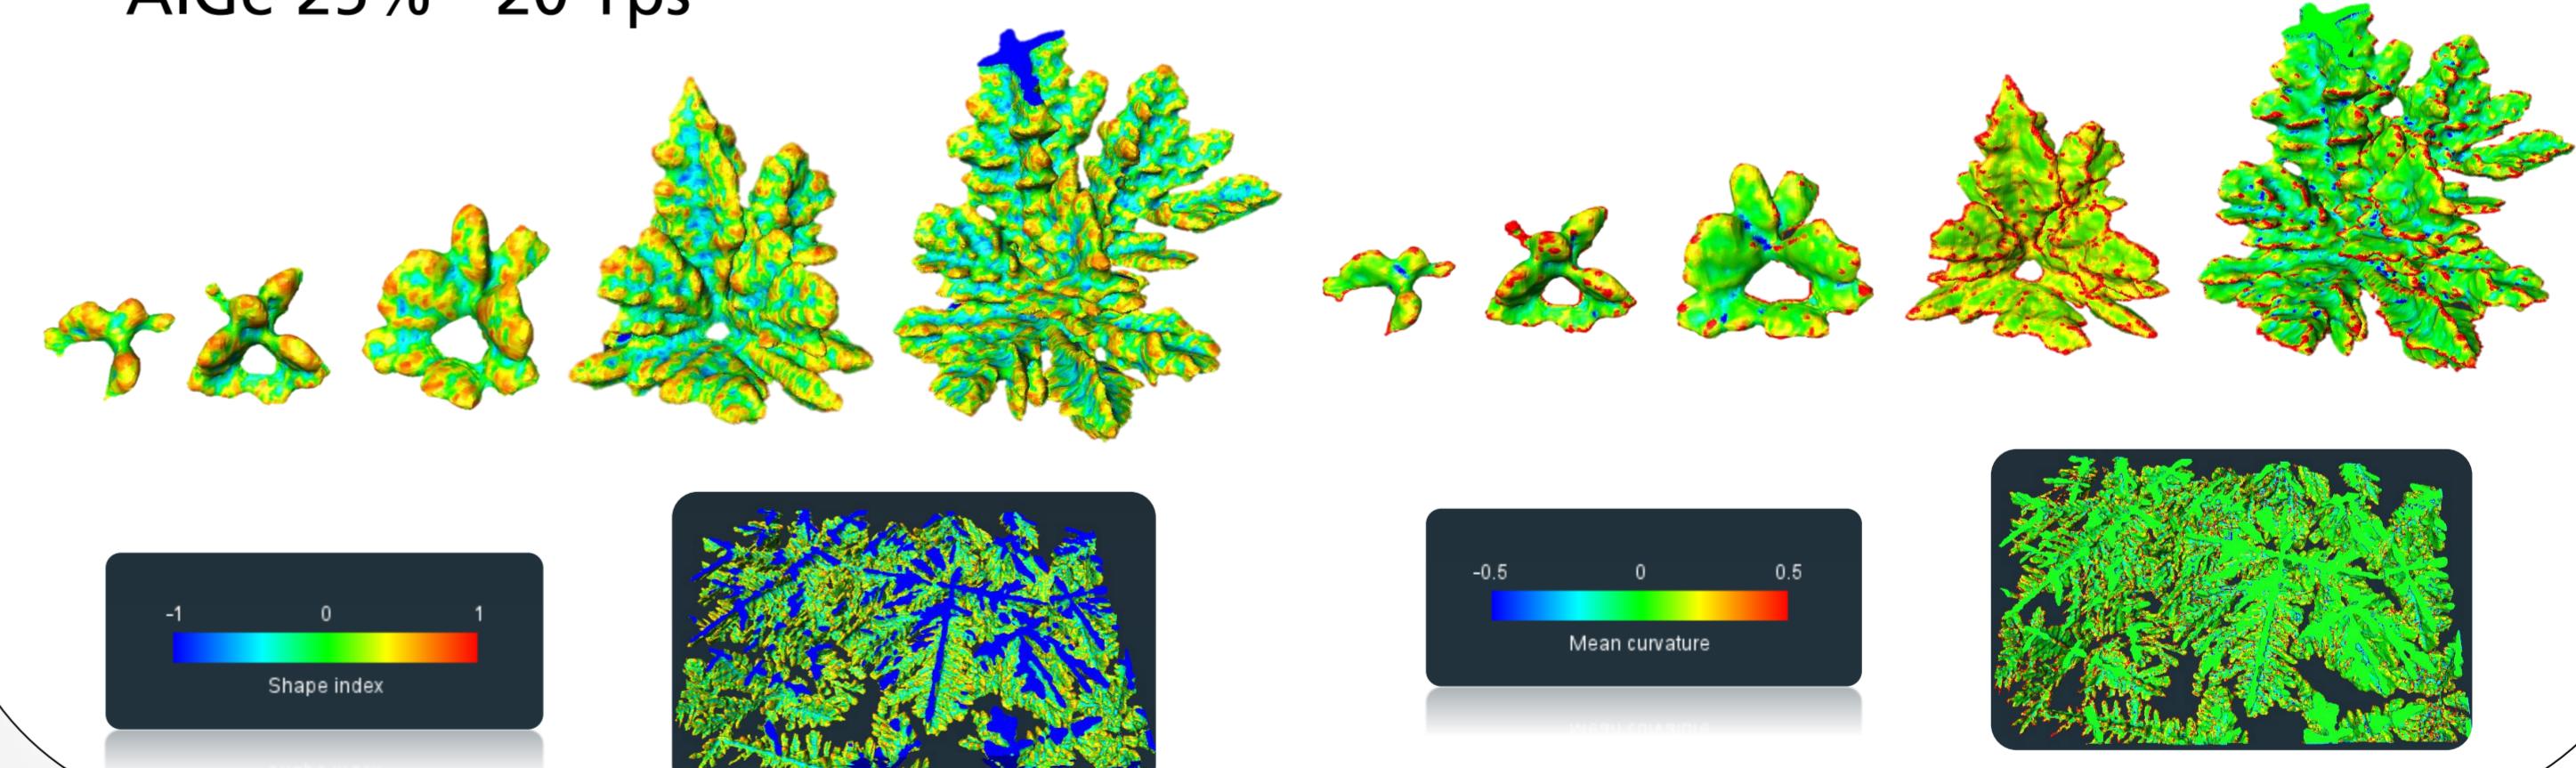

3. Step: Removal edges

- Unequal edges in the same volume
- Universal mask not possible

4. Step: Analysis of the dendrites

- AlGe 25% - 20 Tps

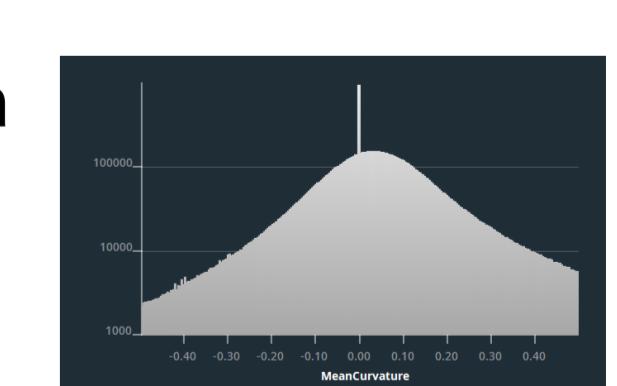

Outlook

Sample Analysis:

- Chemical analysis
- Comparison between different alloys
- Velocity

Analysis of the data extracted from the 3D-dendrites:

Statistical analysis of the Data:

- DAS
- Crystallographic direction
- Curvature
- Shape
- ...

Interface shape distribution (ISD):
