

Contents

1. Bistatic and Multistatic SAR Systems	7
1.1 Introduction.....	7
1.2 Potentials of Bi- and Multistatic SAR.....	8
1.3 Examples.....	10
1.3.1 TechSat21.....	11
1.3.2 Radarsat 2/3 Tandem.....	13
1.3.3 BISSAT.....	15
2. Bistatic SAR with Geostationary Illuminators	19
2.1 Introduction.....	19
2.2 Selection of Satellite Orbits for LEO Receivers.....	20
2.3 Coverage Area with Geostationary Transmitters.....	21
2.4 Performance Analysis.....	23
2.4.1 Local Tangent Plane.....	23
2.4.2 Iso-Range Contours and Range Resolution.....	25
2.4.3 Iso-Doppler Contours and Doppler Resolution.....	27
2.4.4 Range Resolution Cell.....	28
2.4.5 NESZ for Fixed Range Bandwidth.....	29
2.4.6 NESZ for Fixed Ground Resolution.....	30
2.5 Bi-static Scattering Coefficient.....	34
2.6 Revisit Times.....	38
2.7 Antenna Footprint and Digital Beamforming.....	42
2.7.1 Antenna footprint overlap.....	42
2.7.2 Beamforming on the Geostationary Illuminator.....	43
2.7.3 Digital Beamforming on passive LEO receivers.....	44
2.8 Oscillator Phase Noise.....	45
2.9 Conclusions.....	48
3. Multistatic SAR with Transmitter and Receiver Satellites on Low Earth Orbits	49
3.1 Leo Orbits.....	49

3.2	Interferometric SAR with passive LEO receivers	50
3.2.1	Interferometric Cartwheel	51
3.2.2	Cross-Track Pendulum.....	54
3.2.3	CarPe	56
3.3	Performance Analysis for Interferometric LEO Configurations	58
3.3.1	Noise Equivalent Sigma Zero	58
3.3.2	Quantization Errors	59
3.3.3	Ambiguity Analysis	60
3.3.4	SNR Derivation.....	61
3.4	Geometric Decorrelation	61
3.4.1	Surface Scattering.....	61
3.4.2	Along-Track Separation.....	63
3.4.3	Volume Decorrelation.....	64
3.5	Estimation of Relative Height Accuracy.....	66
3.5.1	Interferometric Phase Estimation.....	66
3.5.2	Derivation of Height Errors	67
3.6	Model Based Topography Estimation	69
3.7	Required Orbit/Baseline Accuracy	72
3.7.1	Estimation of required orbit accuracy without tie points	72
3.7.2	Estimation of cross-track height errors with one tie point.....	74
3.7.3	Improved estimation of orbit trajectories	77
3.8	Oscillator Stability	78
3.9	Satellite Constellation Impacts	81
3.10	Discussion	83
4.	Collection of Further Ideas and Concepts	85
4.1	Alternative Orbits	85
4.1.1	Geosynchronous Orbits.....	85
4.1.2	Parasitic SAR with Geosynchronous Orbits.....	87
4.1.3	MEO Orbits	89
4.2	Further Concepts with Sparse Satellite Arrays.....	92
4.2.1	Super-Resolution with Sparse Satellite Constellations.....	93

4.2.2	Ambiguity Reduction and Wide Swath Imaging with Multiple Receivers	94
4.2.3	High Resolution Wide Swath Imaging by Spectral Partitioning	95
4.2.4	Spotlight Hand-Over	96
4.3	Further Investigations and Developments	98
4.3.1	Bistatic Airborne Experiment	98
4.3.2	Bistatic SAR in Space.....	100
4.3.3	Questions for Future Research.....	102
4.3.4	Technological Requirements for Bi- and Multistatic SAR	103
5.	Conclusions	104
6.	Literature	106
