

# DLR's Calibration Home Base (CHB) for Imaging Spectrometers: Equipment and Knowledge for Air- and Spaceborne Instruments

Gabriel Scheib<sup>1\*</sup>, Andreas Baumgartner<sup>1</sup>, Thomas Schwarzmaier<sup>1</sup>

<sup>1</sup>German Aerospace Center (DLR), Remote Sensing Technology Institute  
\*gabriel.scheib@dlr.de

## What is the CHB?

- Calibration laboratory for airborne imaging spectrometers
- Equipment + knowledge also for spaceborne instruments
- Established in 2007, partly funded by ESA
- Ongoing improvements
- Open to third party customers

CHB laboratory: calibration bench (1), folding mirror (2), monochromator (3), collimator (4), integrating sphere (5)

## Capabilities

### Geometric calibration

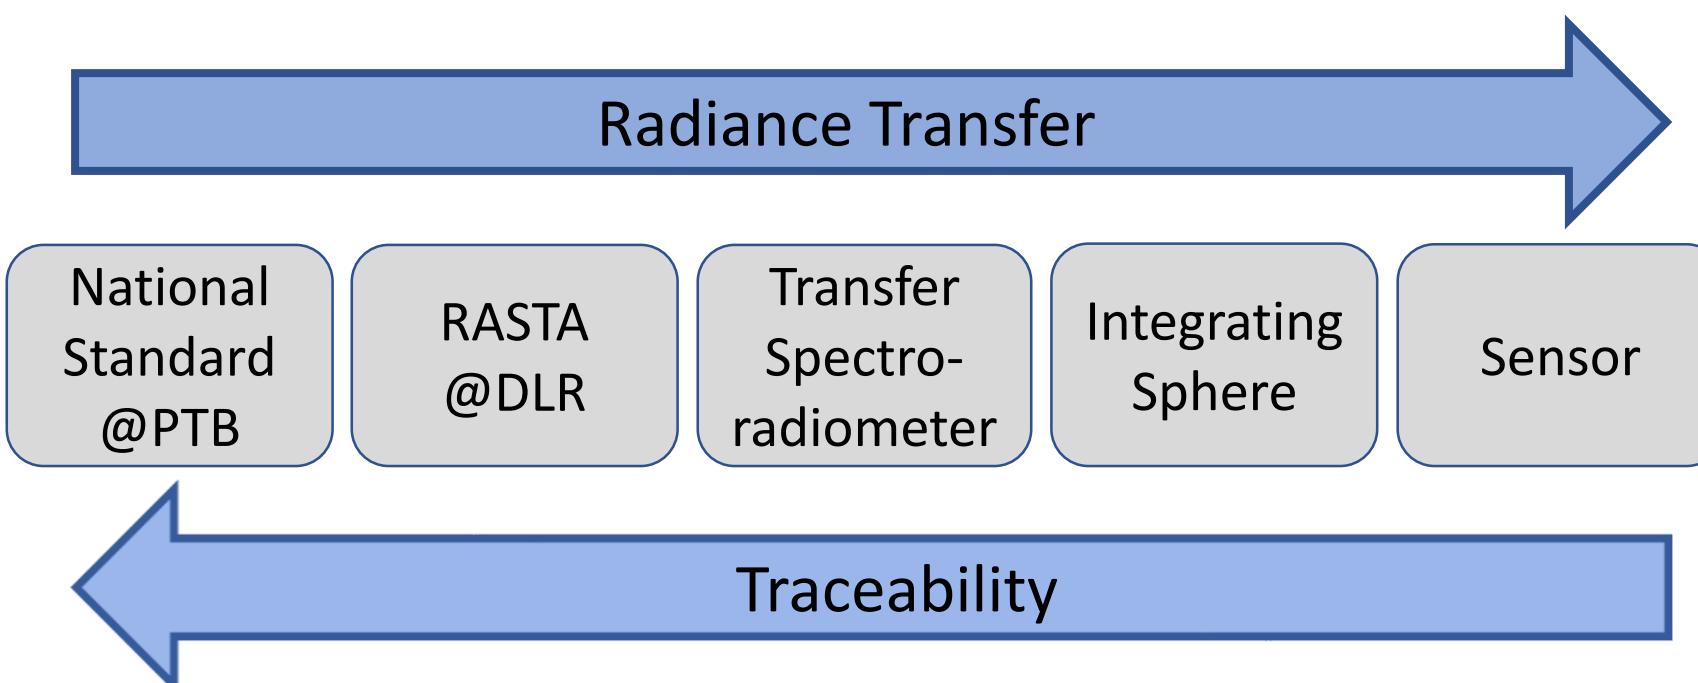

- Automated collimator setup with several targets
- Angular range:  $\pm 25^\circ$  with  $\pm 6 \mu\text{rad}$  accuracy
- Sensor aperture:  $\phi < 10 \text{ cm}$

### Spectral calibration

- Monochromator setup
- Spectral range: 380 - 2500 nm
- Uncertainty:  $\pm 0.1 \text{ nm}$  (VNIR),  $\pm 0.2 \text{ nm}$  (SWIR)

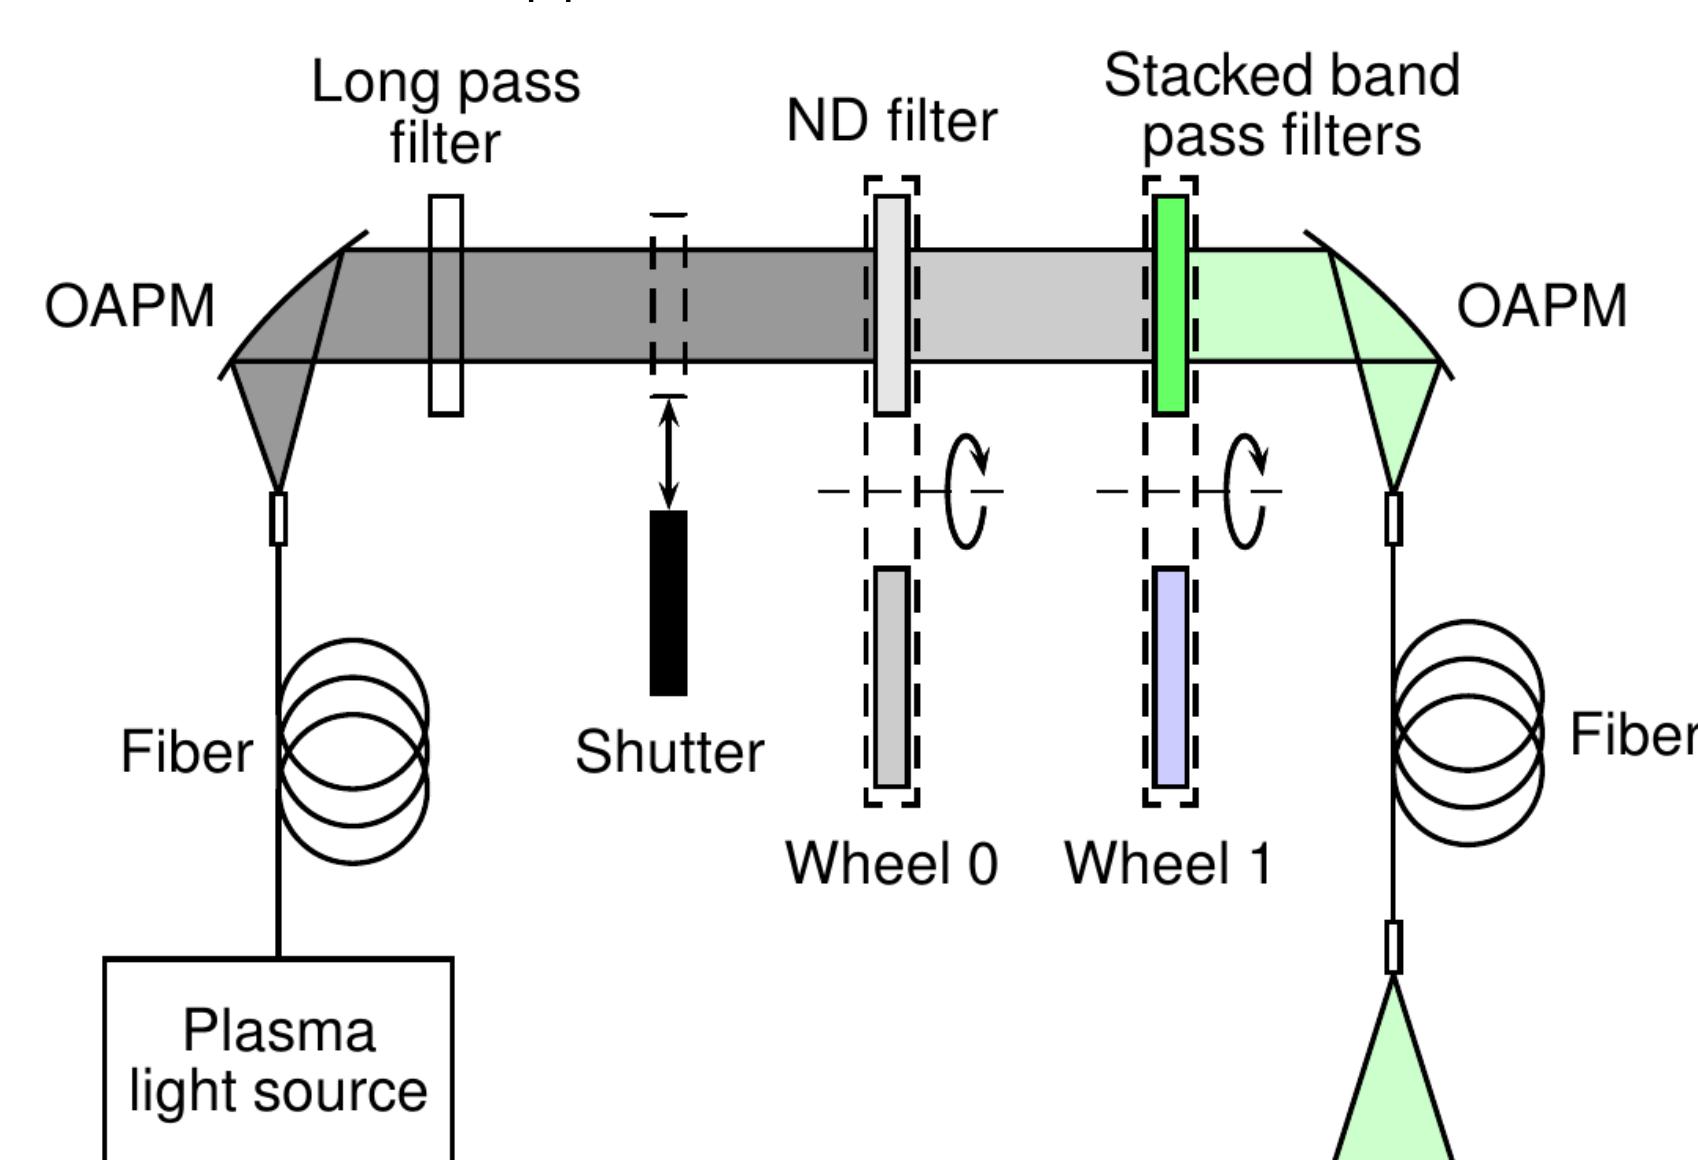

### Radiometric calibration

- Traceable to PTB (German Metrology Institute)
- RASTA: self-monitoring secondary RAdiance STAndard
- Integrating sphere with diameter of 165 cm
- Radiometric uncertainty (after transfer):  $< 3\%$  ( $k = 2$ )

### Stray light calibration

- Stray Light Test Source (SLTS) developed by DLR
- Combination of 15 stacked bandpass and 11 ND filters
- SLTS output guided to collimator via optical fiber
- Out of band suppression  $> 80 \text{ dB}$

### Non-linearity calibration

- Broadband Attenuable Light Source (BAYLIS)
- Light addition method
- Spectral range: 350 - 2500 nm

### Polarization sensitivity calibration

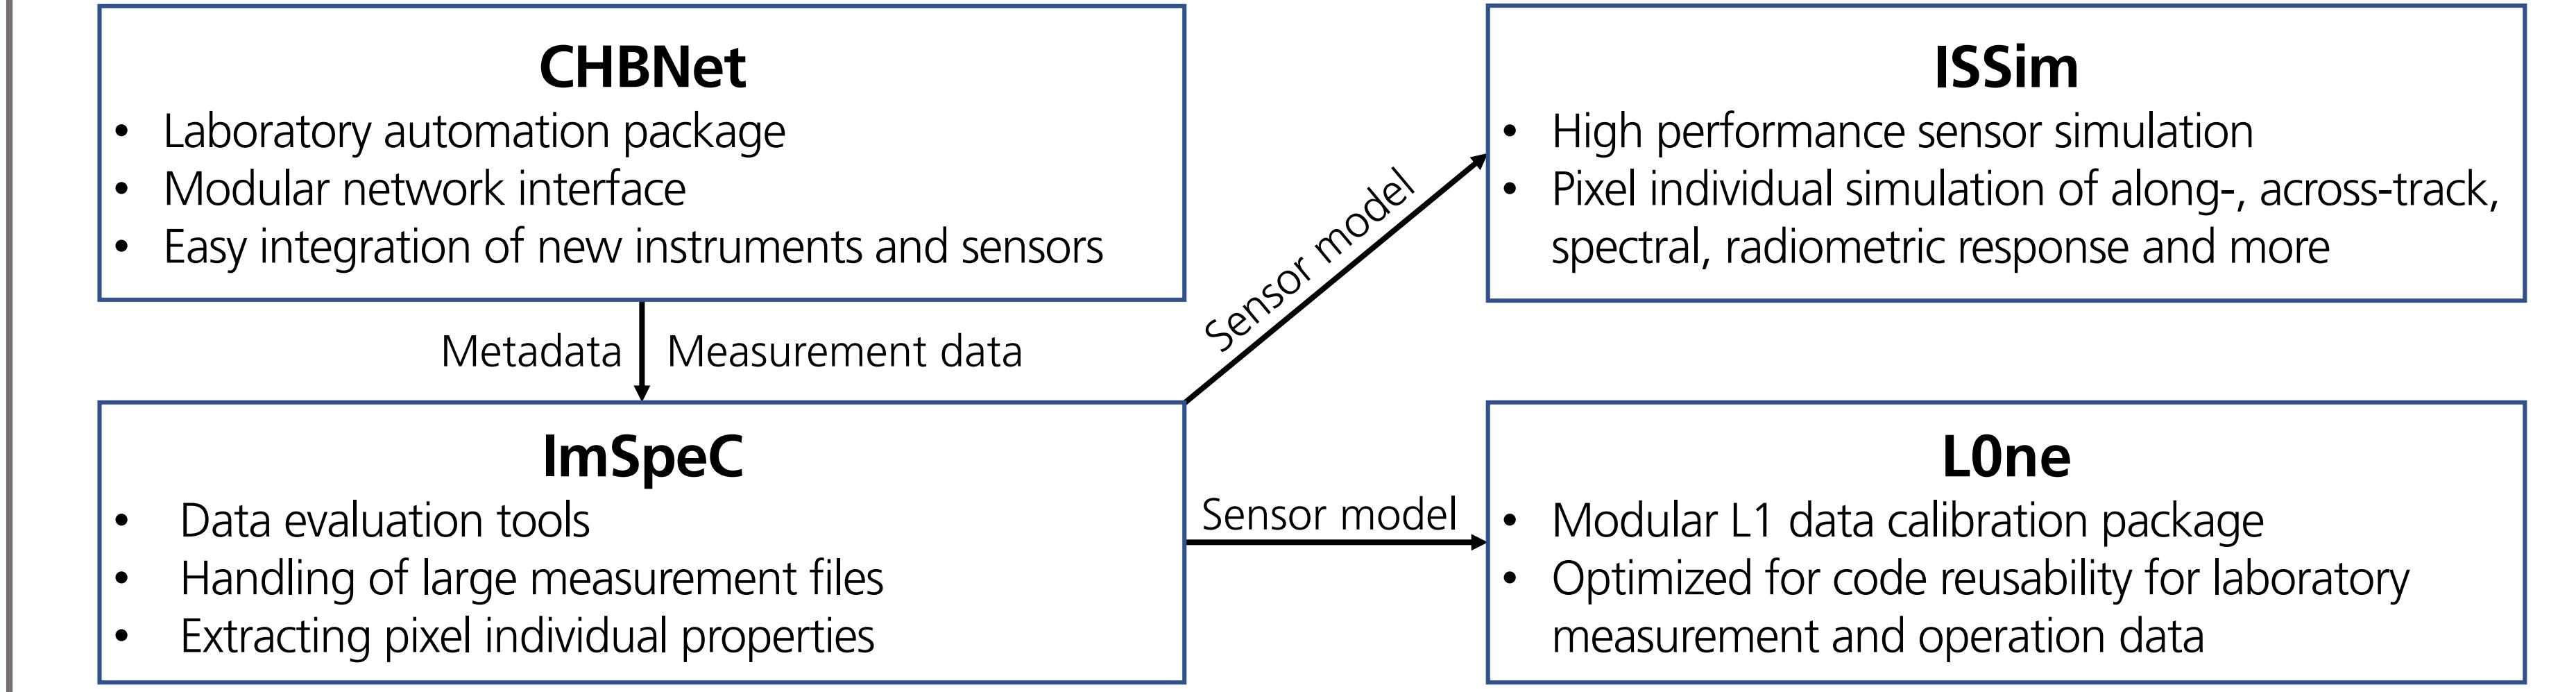

Broadband wire grid polarizer

### Temperature response calibration

Scalable temperature controlled enclosure

## Software

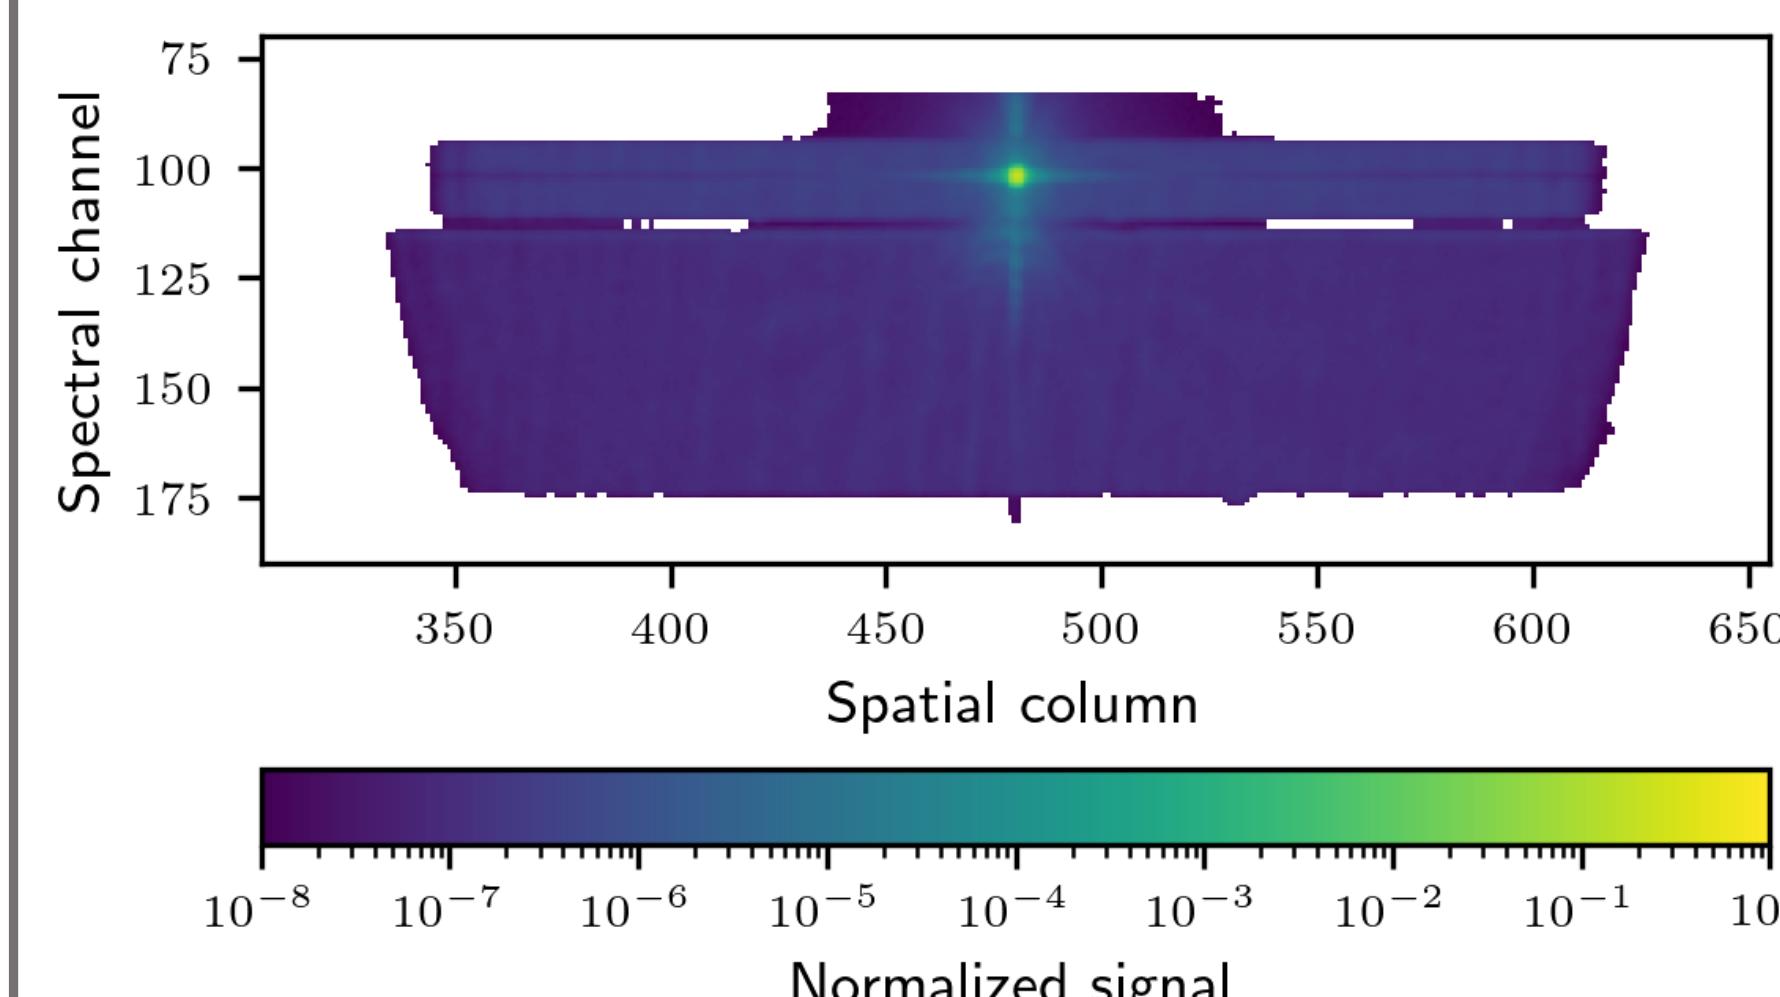

Developed and used in the context of CHB

## Selected Activities

### EnMAP mission (OHB)

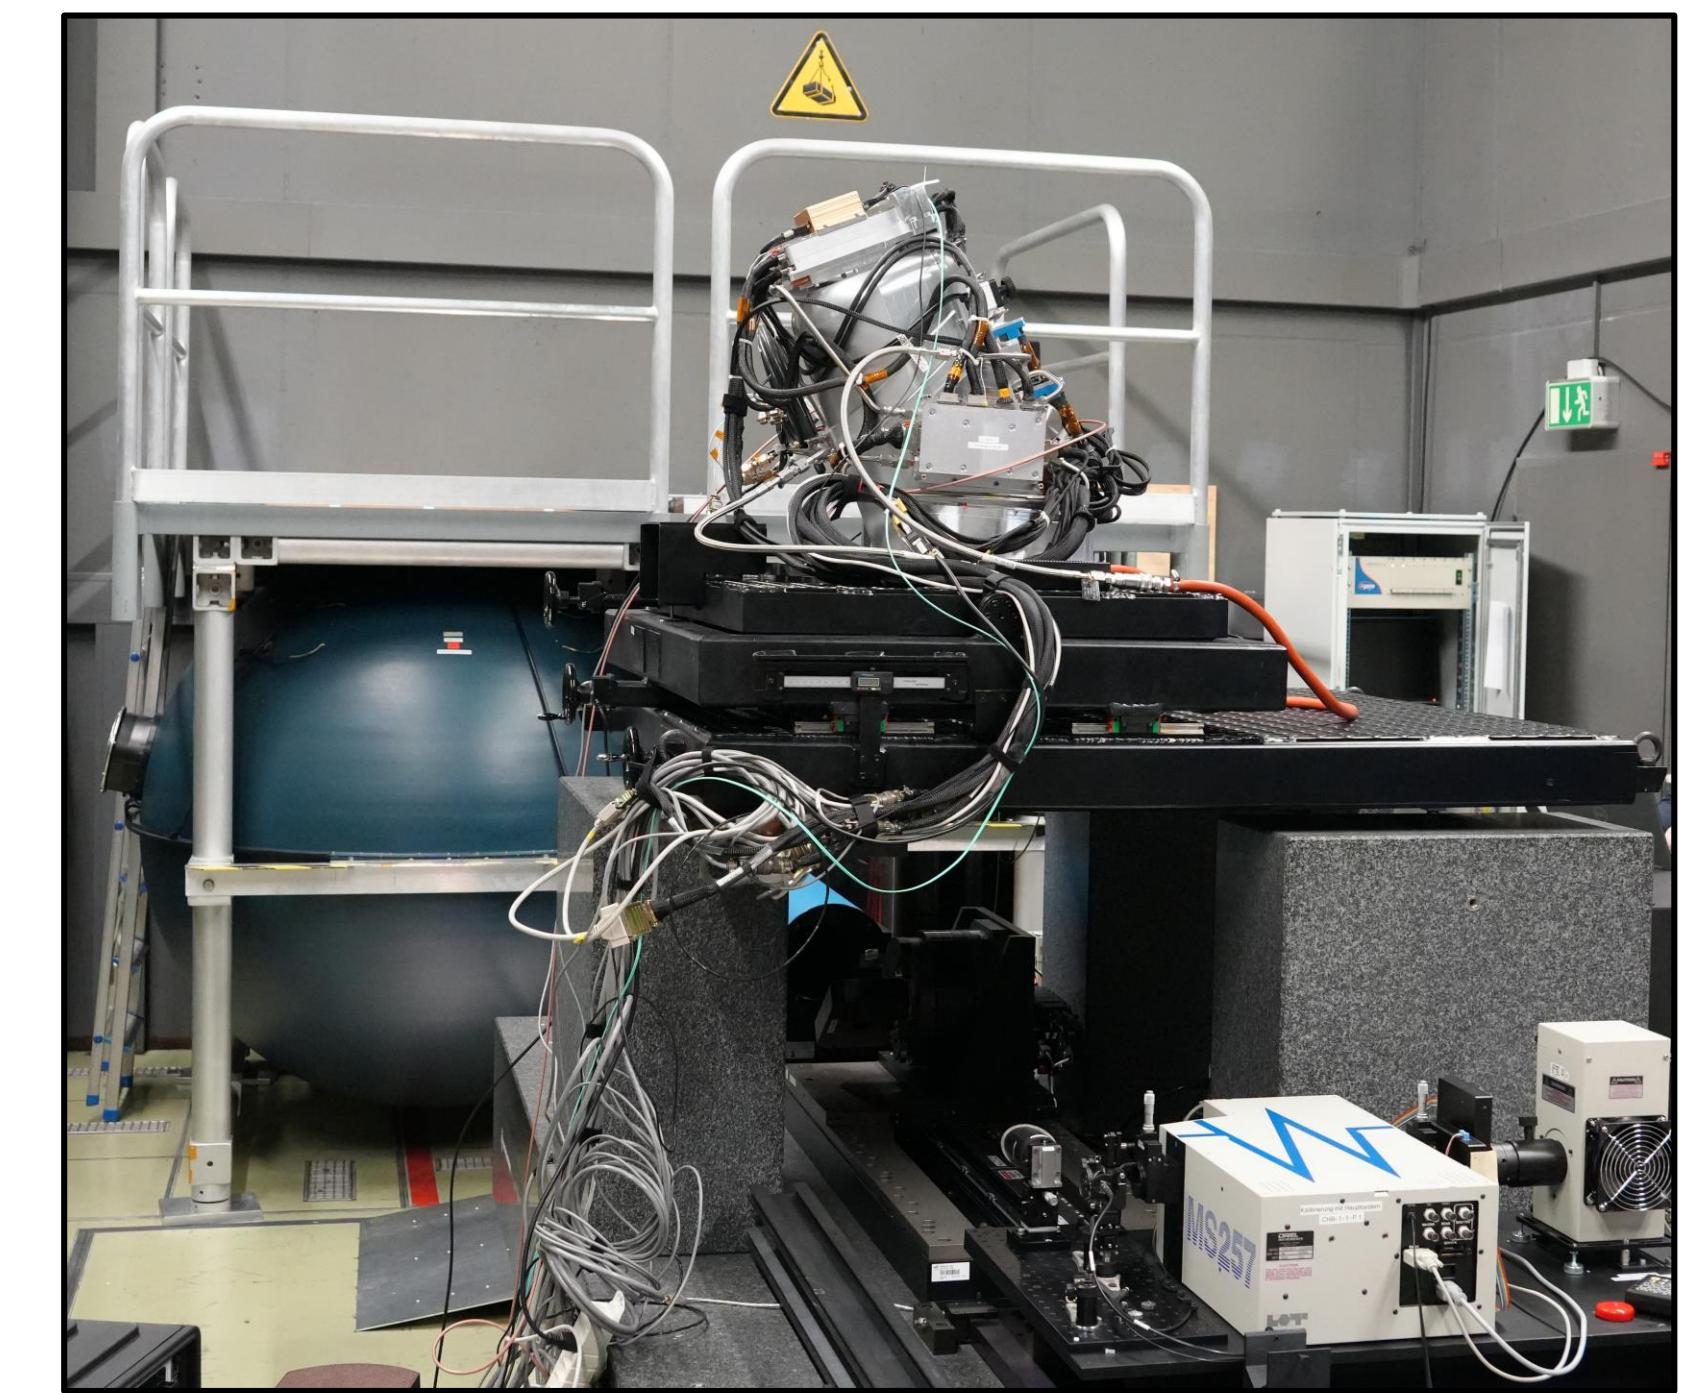

- Consultancy
- Radiometric calibration using CHB's
  - RASTA (RAdiance STAndard)
  - Transfer spectroradiometer
  - Integrating sphere
- Stray light calibration under lead of CHB personnel with CHB's Stray Light Test Source (SLTS)

Stray light point spread function of EnMAP's VNIR spectrometer

### UZH's AVIRIS-4 (NASA/JPL)

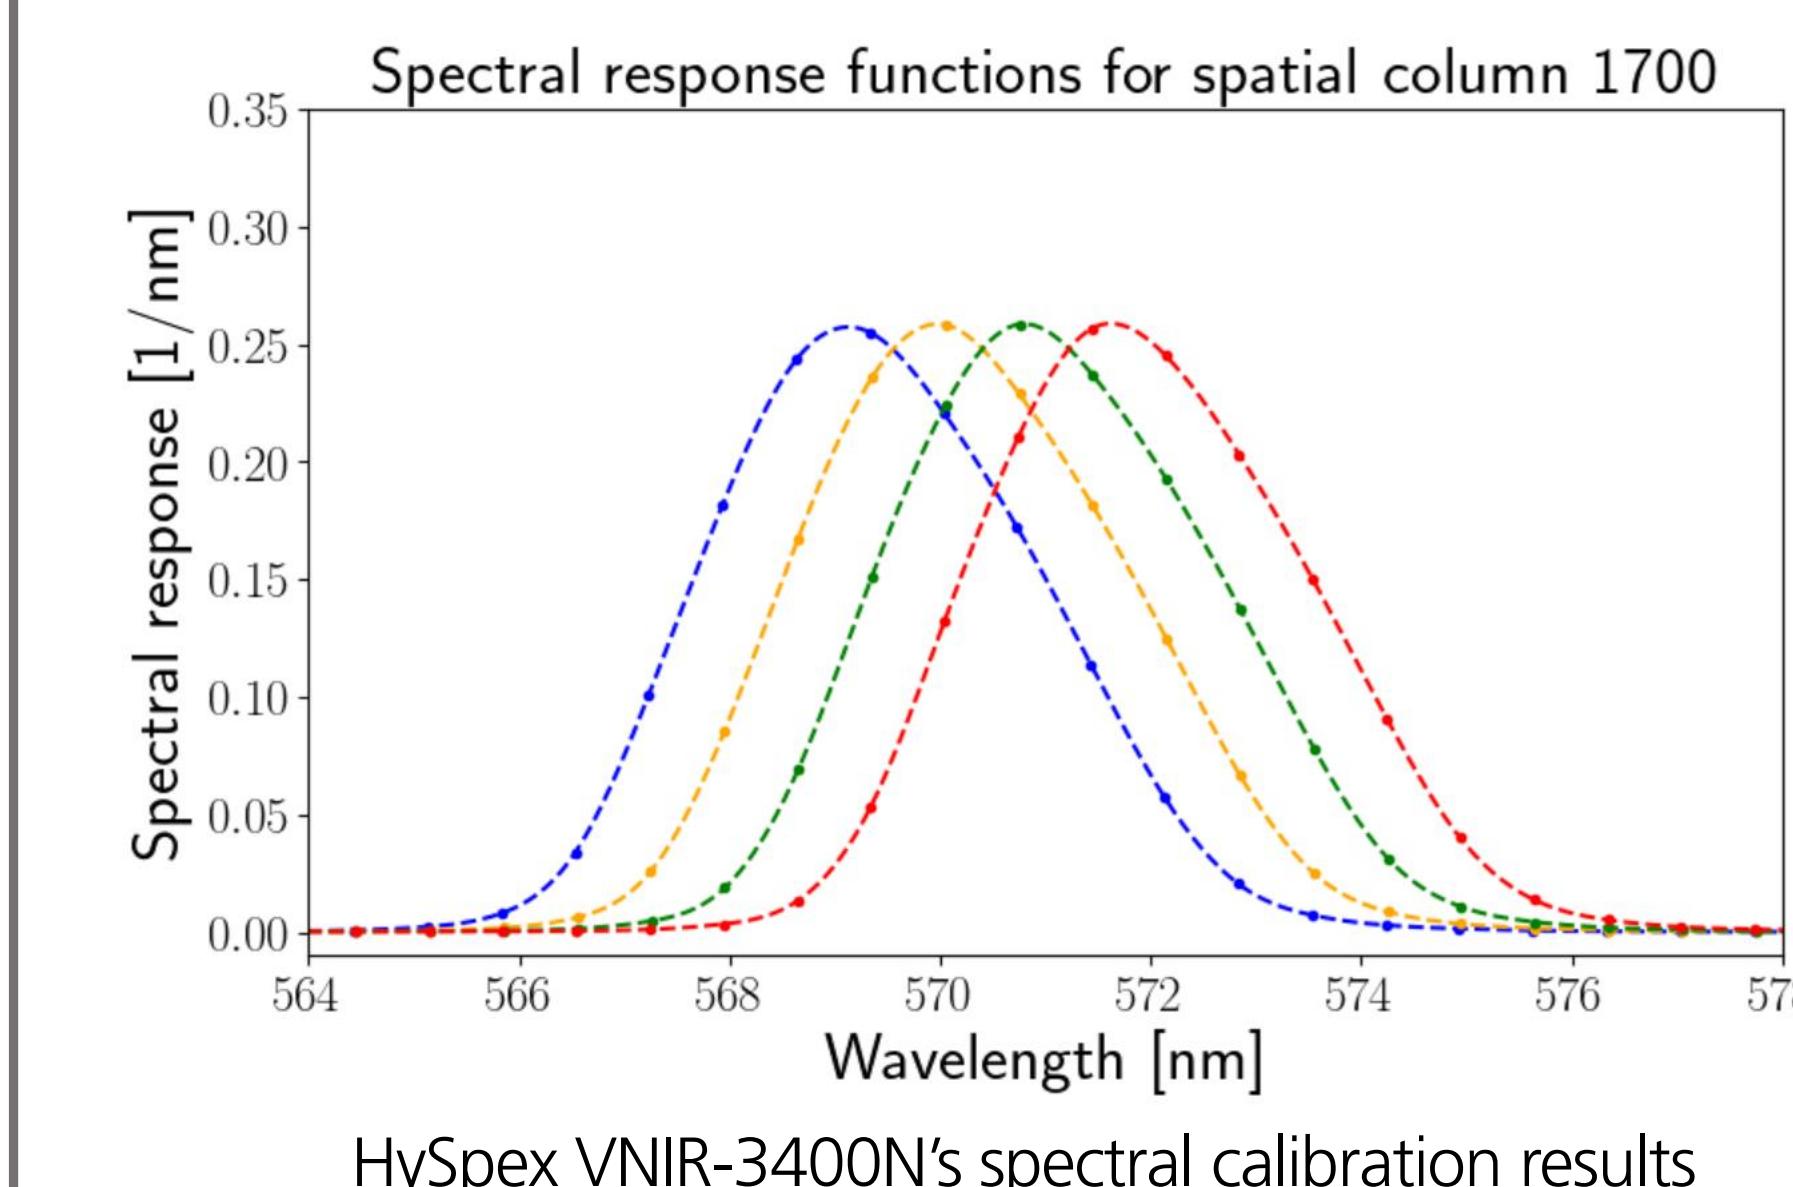

- Operated by University of Zurich, Switzerland
- October 2024: initial calibration of geometric, spectral and radiometric properties
- Further campaigns for stray light, polarization, etc. are planned

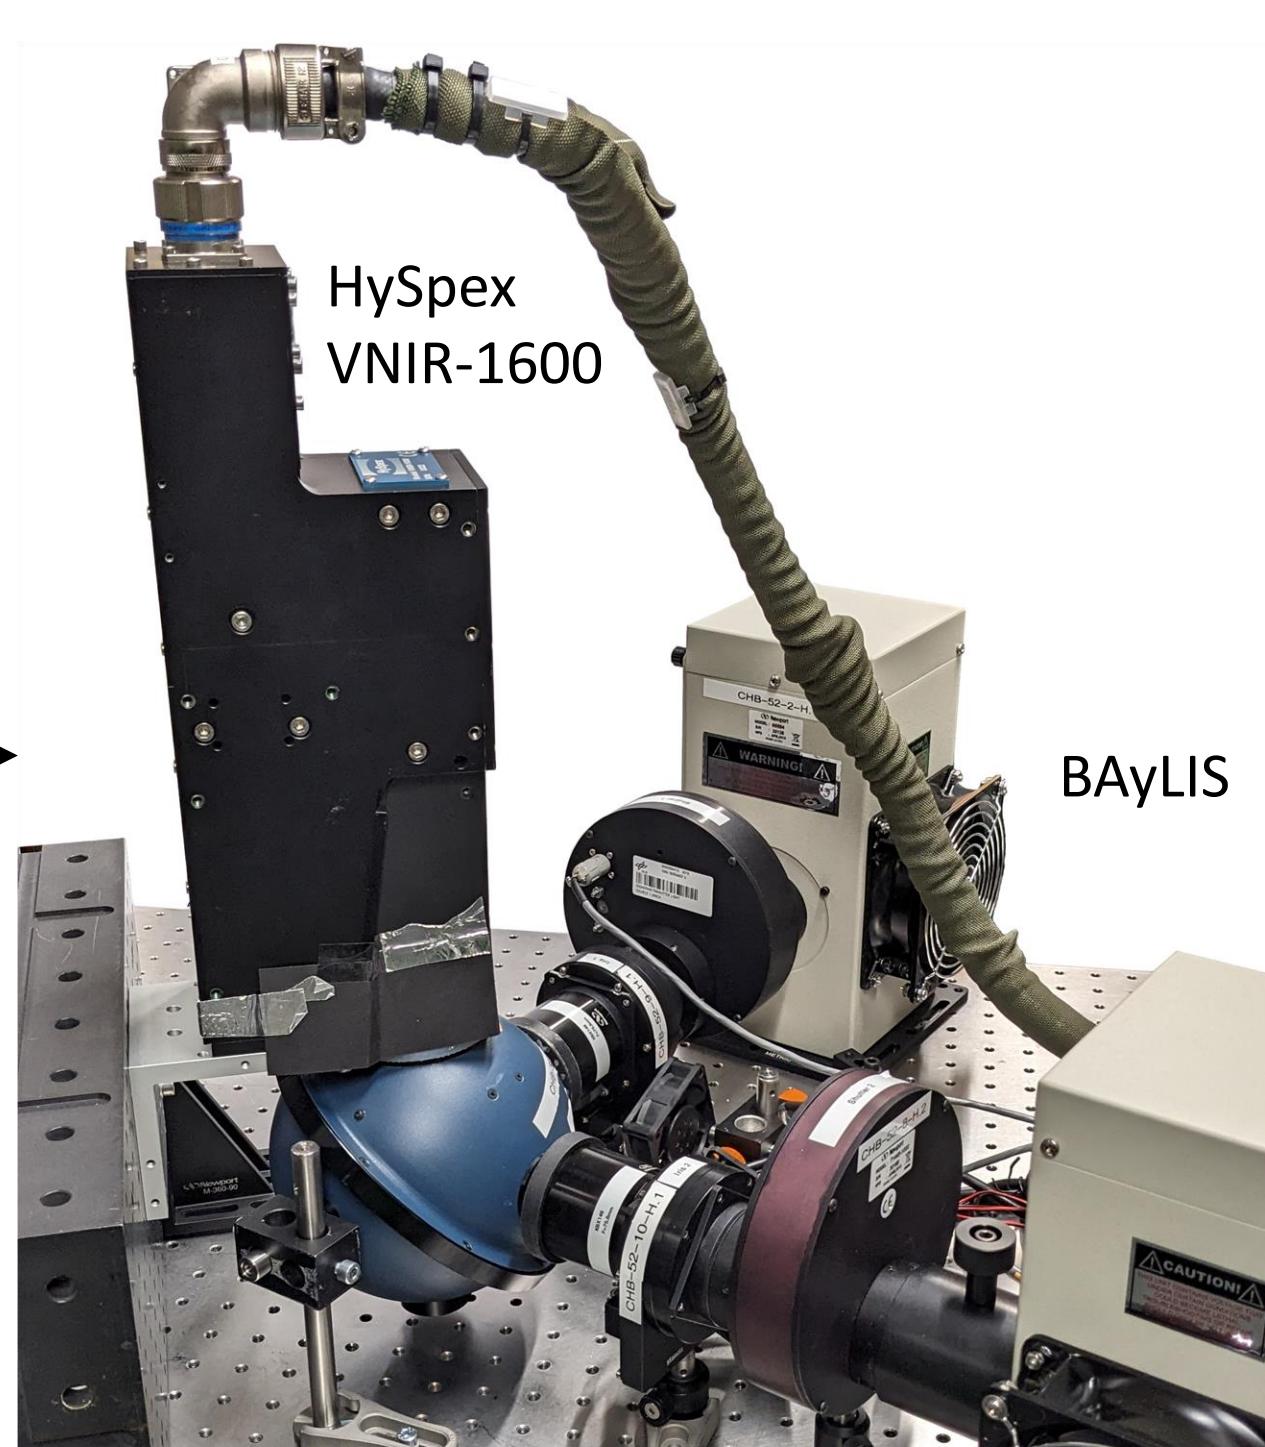

AVIRIS-4 mounted for geometric and spectral calibration

### DLR's HySpex VNIR-3400N and SWIR-384 (NEO)

- Our own instruments
- Recurring calibrations
- Testbed for improving and developing new calibration methods

HySpex VNIR-3400N's spectral calibration results

### Upcoming improvement: Tunable laser system

- Ekspla NT262
- Spectral range: 210 - 2600 nm
- Spectral calibration (coupled to integrating sphere)
- Stray light calibration (coupled to collimator)
- Delivery January 2025

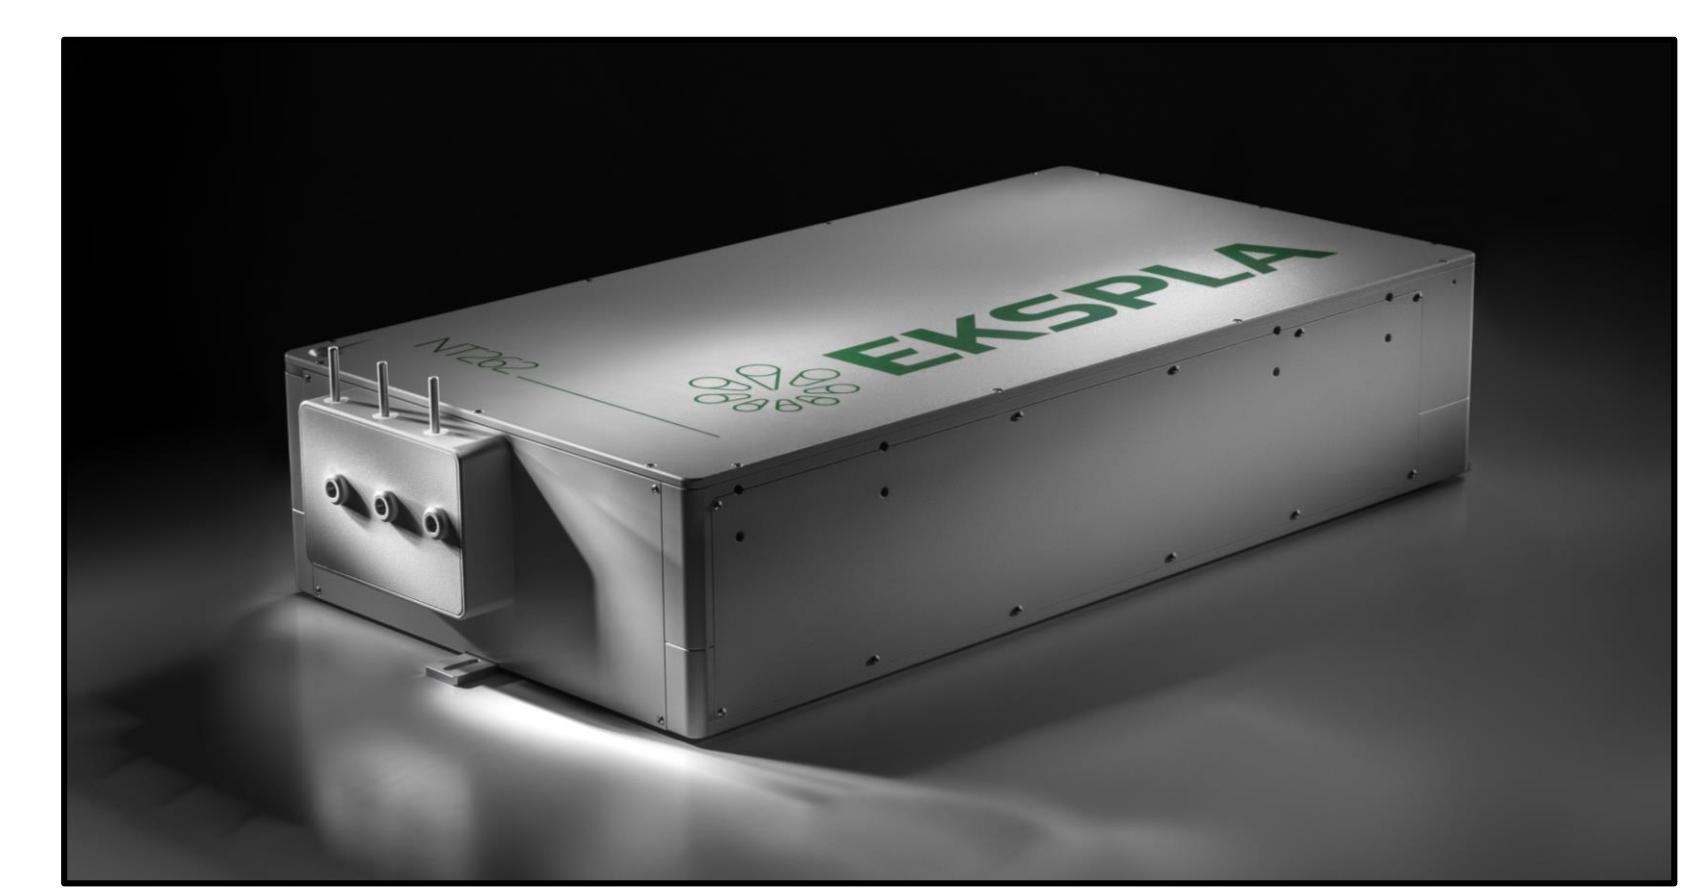

Image usage with friendly permission by Ekspla
