

ROBUSTNESS, ACCURACY AND EFFICIENCY OF DGSEM UNDER LOCAL MESH REFINEMENT

STAB Symposium

November 13, 2024

Miquel Herrera, Ralf Hartmann

MOTIVATION

Towards industrial LES via DGSEM

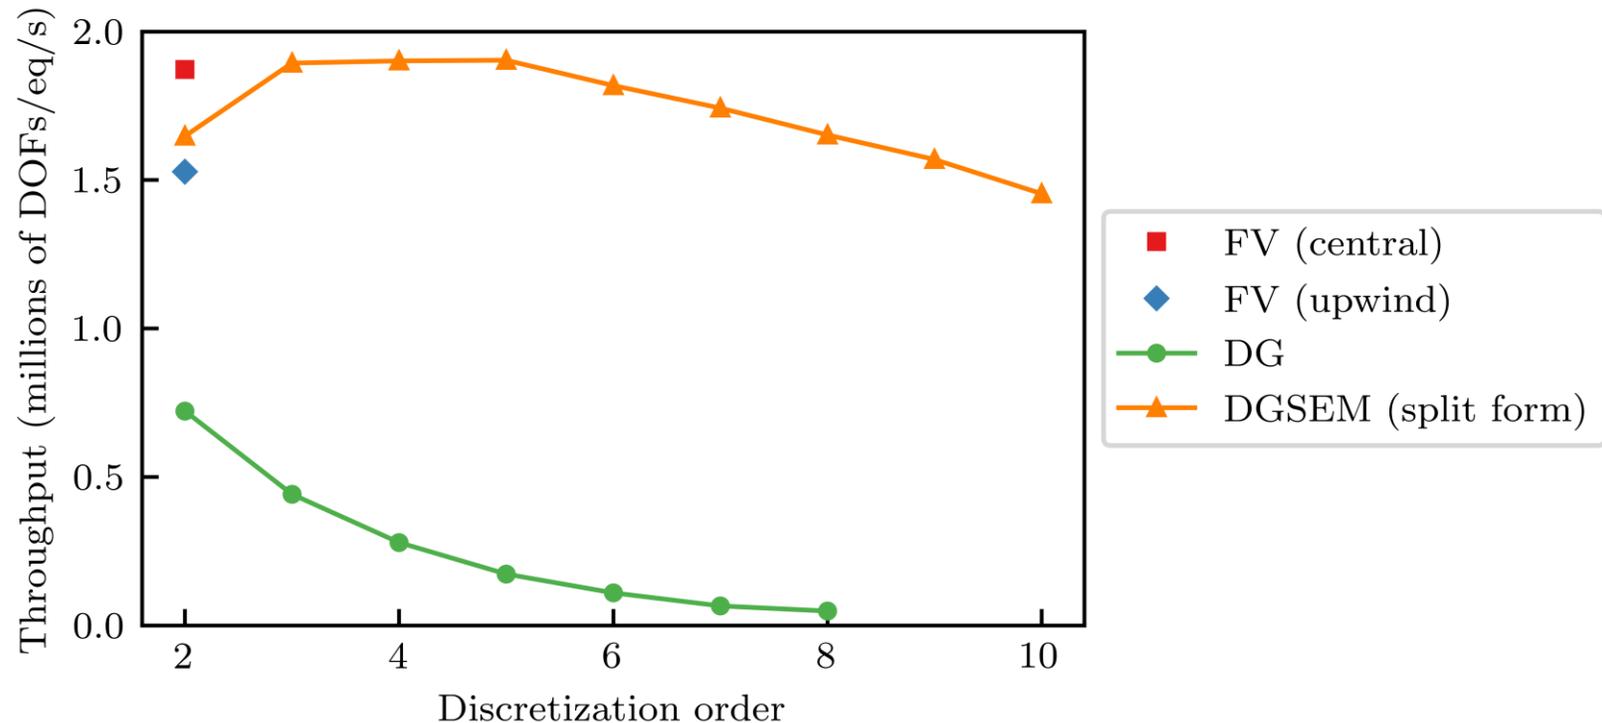

Available in CODA, the CFD software of ONERA, DLR and Airbus

High order of accuracy

Robustness

High throughput

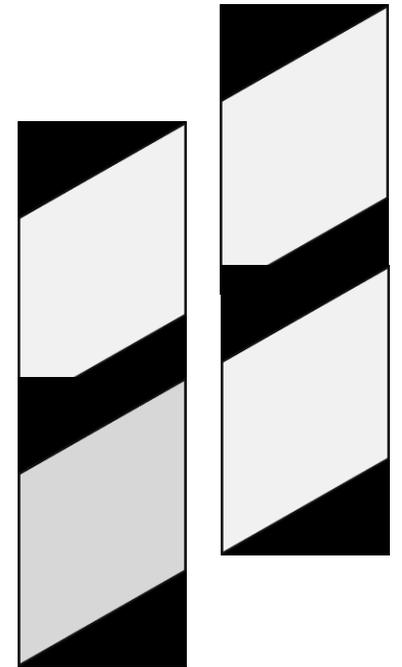

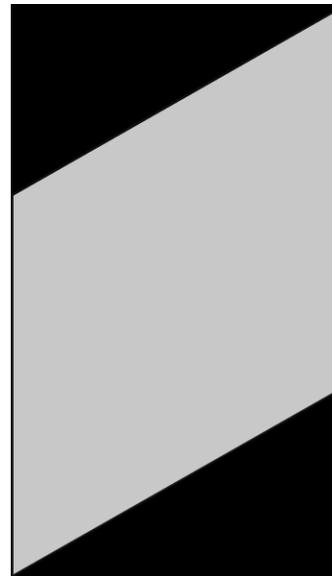

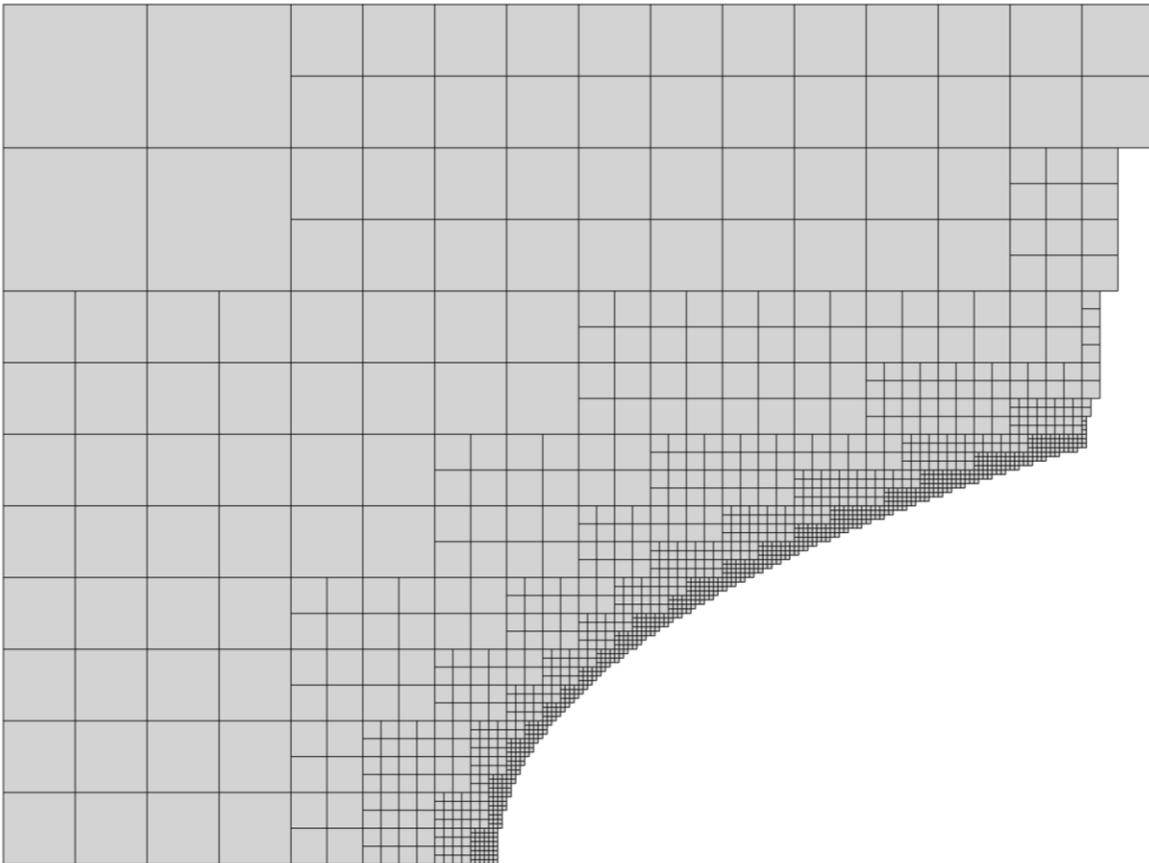

} Higher order \rightarrow fewer DOFs \rightarrow lower cost?

Nonconforming hexahedra meshes

Local isotropic grid refinement

Automatic mesh generation?

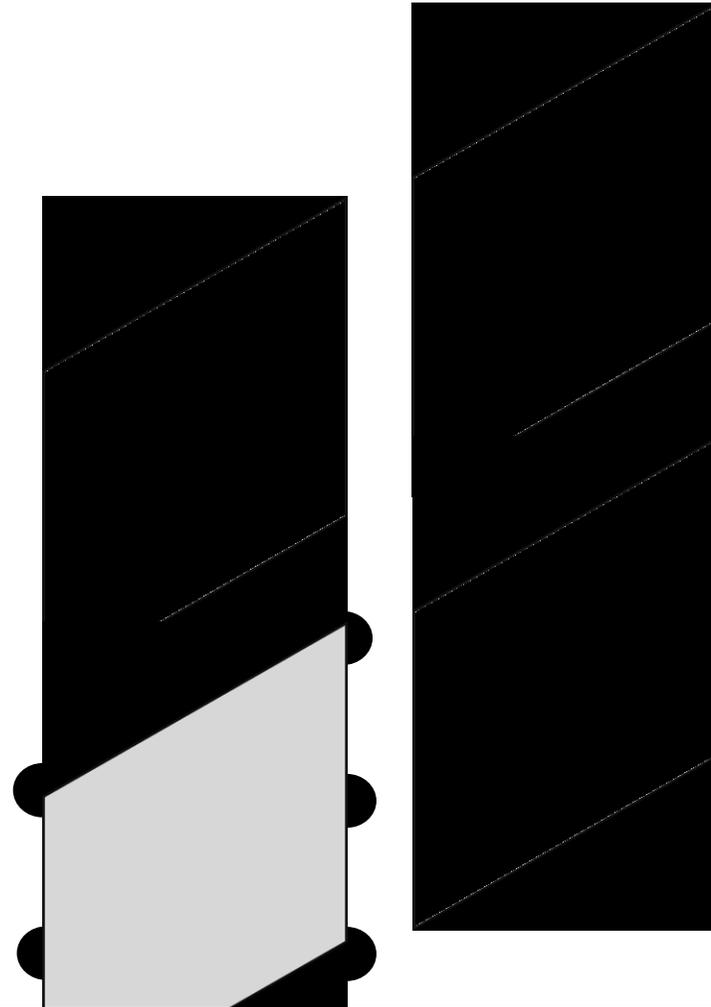

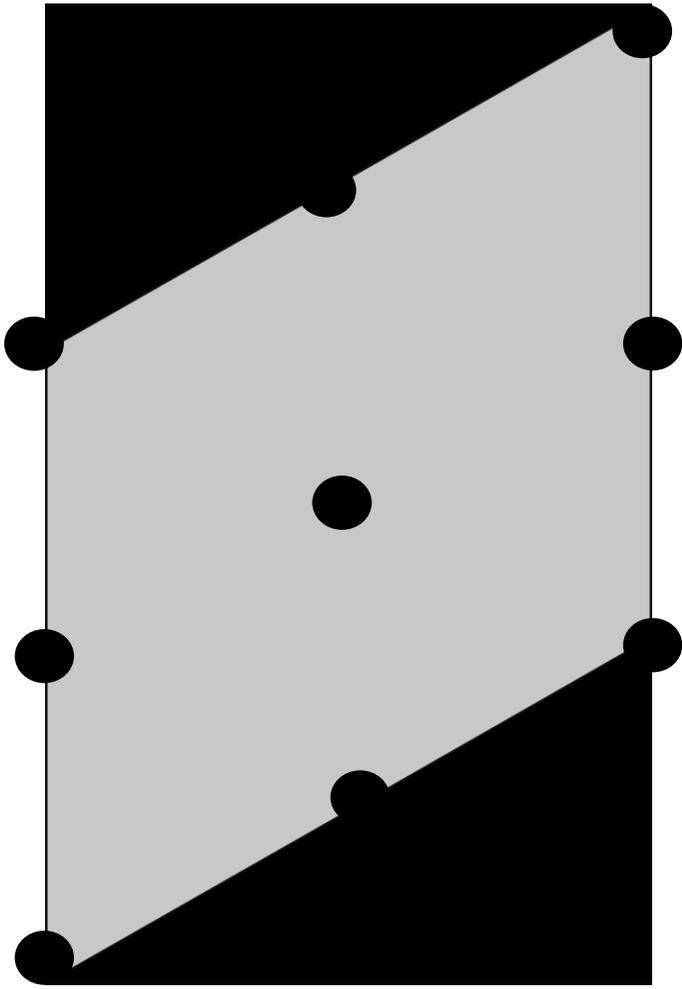

Current status & today's talk

We have extended DGSEM in CODA to nonconforming hexahedra meshes

We verified robustness and accuracy using two LES benchmark cases

- Taylor Green vortex
- Periodic hill

Here is what we found

METHODOLOGY

DGSEM

Legendre-Gauss-Lobatto (LGL) quadrature

Collocated Lagrange polynomial basis

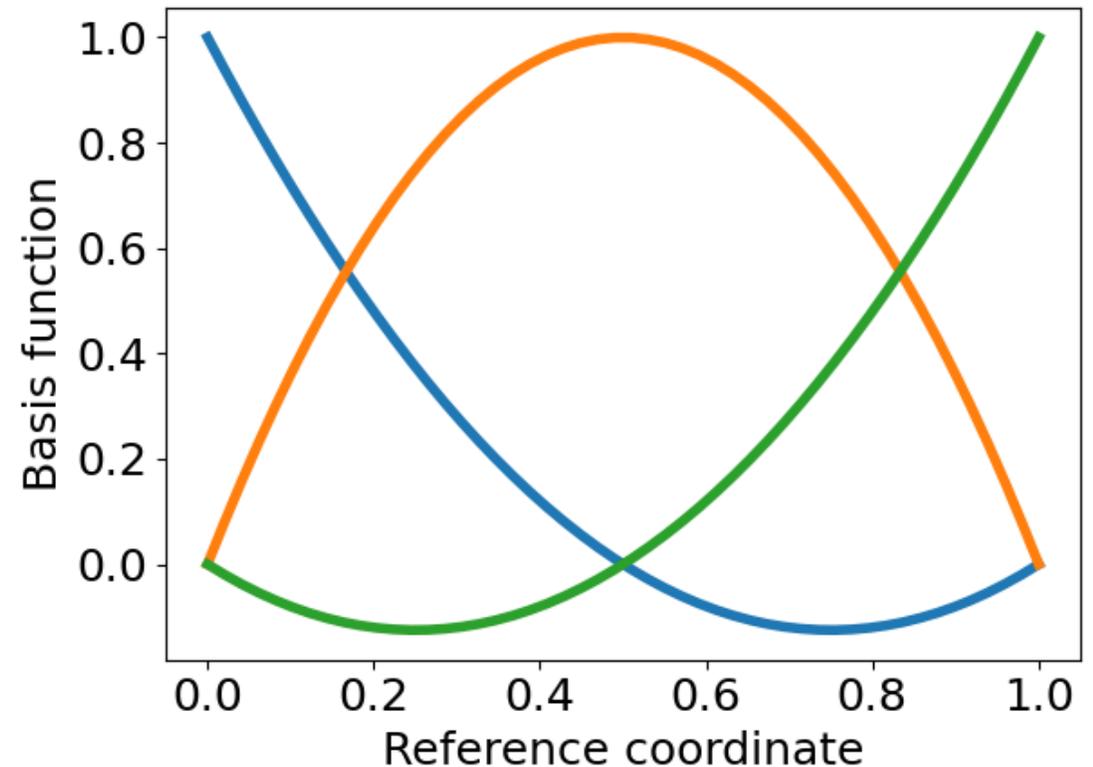

Metric terms of Kopriva (2006)

Split-form a la Gassner et al. (2016)

Two-point EC volume flux of Chandrashekar (2013)

Roe upwind convective scheme

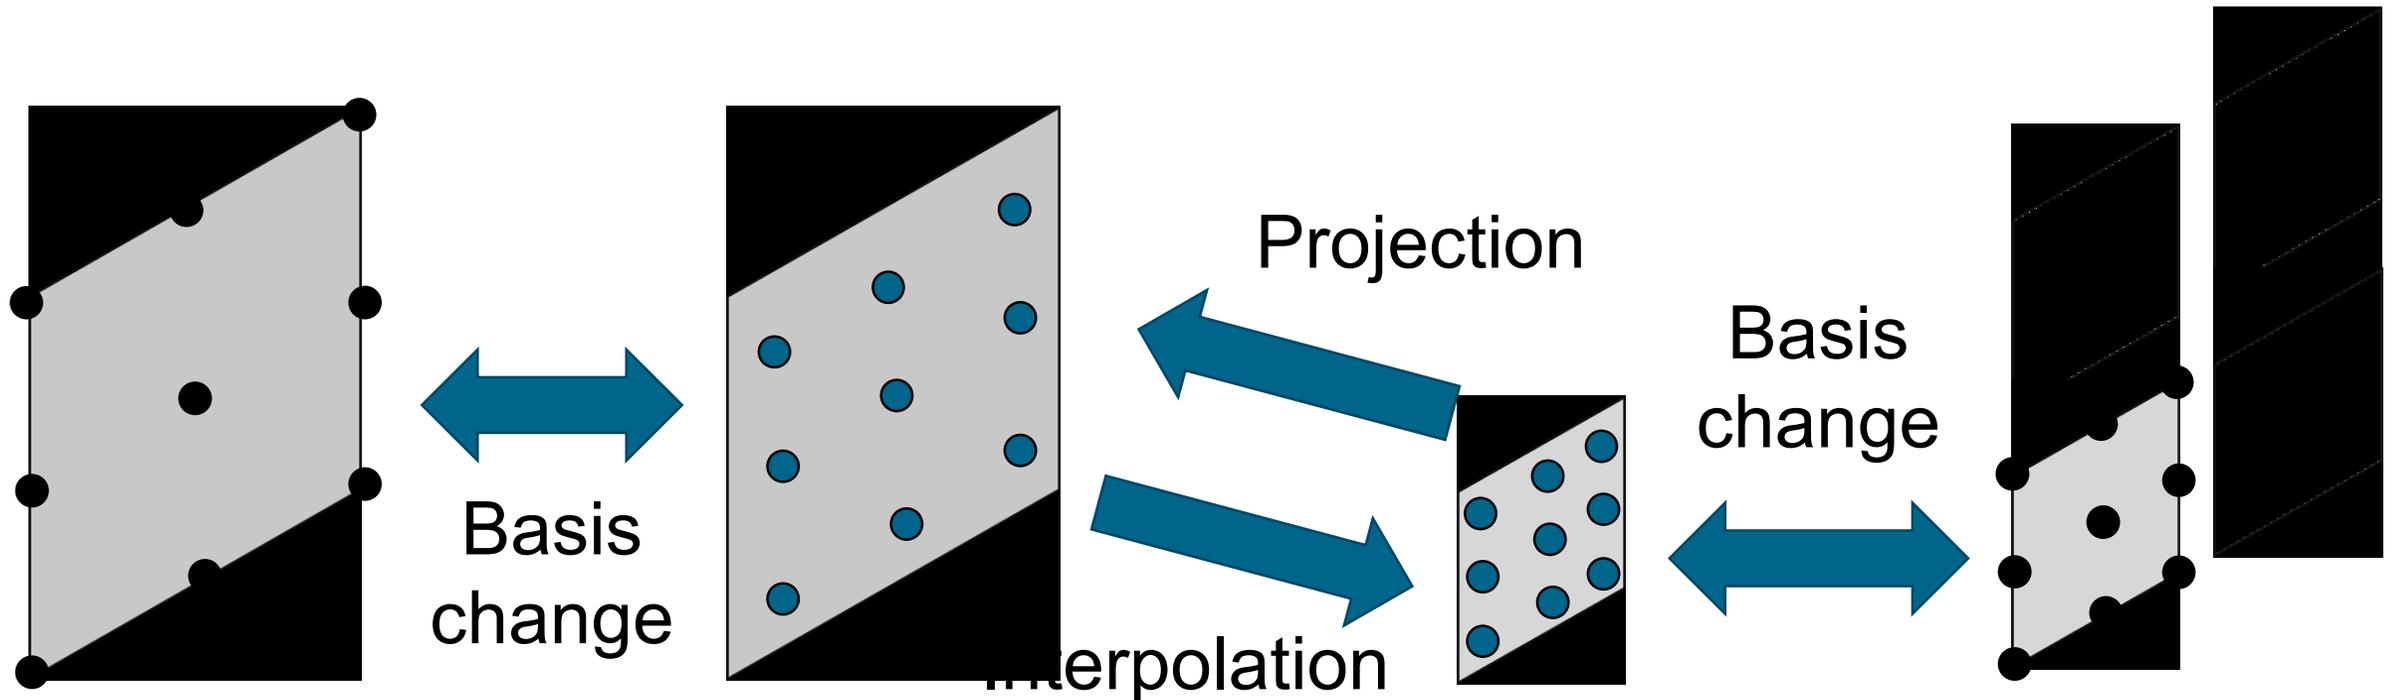

BR2 gradient lifting

Nonconforming face treatment

Standard mortar method a la Kopriva (1996)

Gauss (not collocated) quadrature

Time scheme

Low-storage explicit Runge-Kutta of Niegemann et al. (2012)

4th order

14 stages per time step

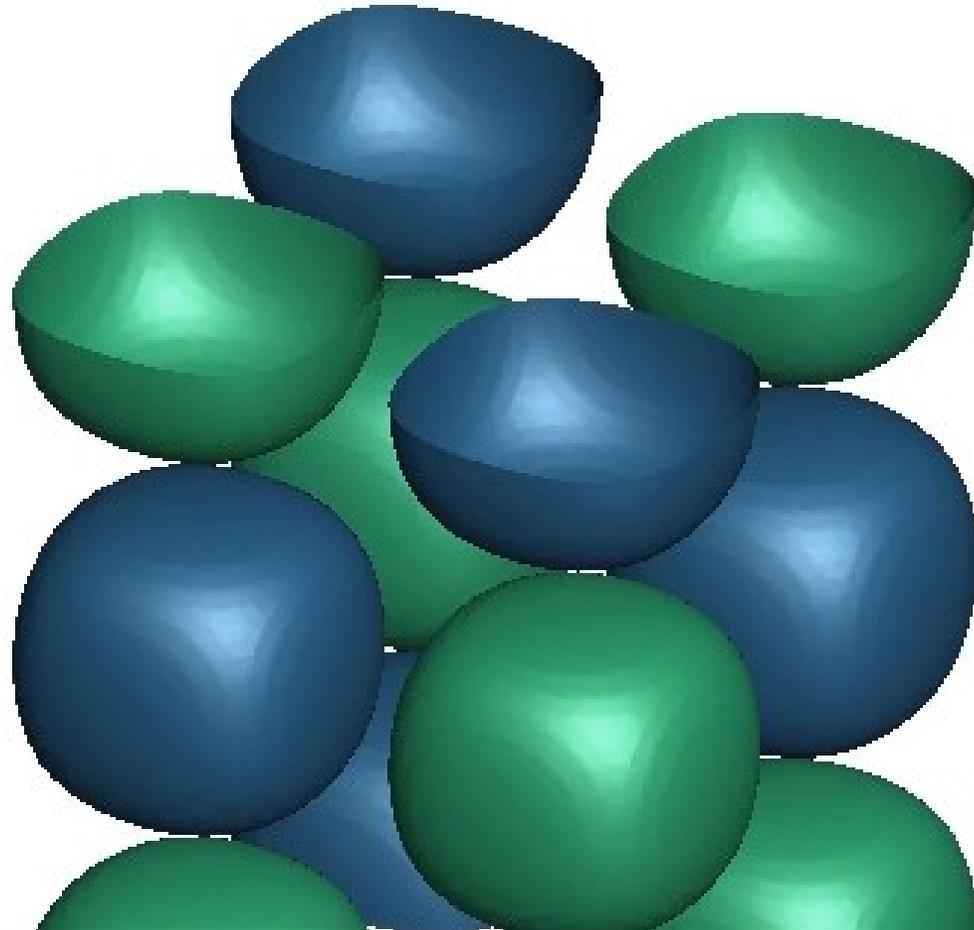

Constant time step size

Physical model

Compressible Navier-Stokes equations

No explicit subgrid-scale model

Perfect gas, air

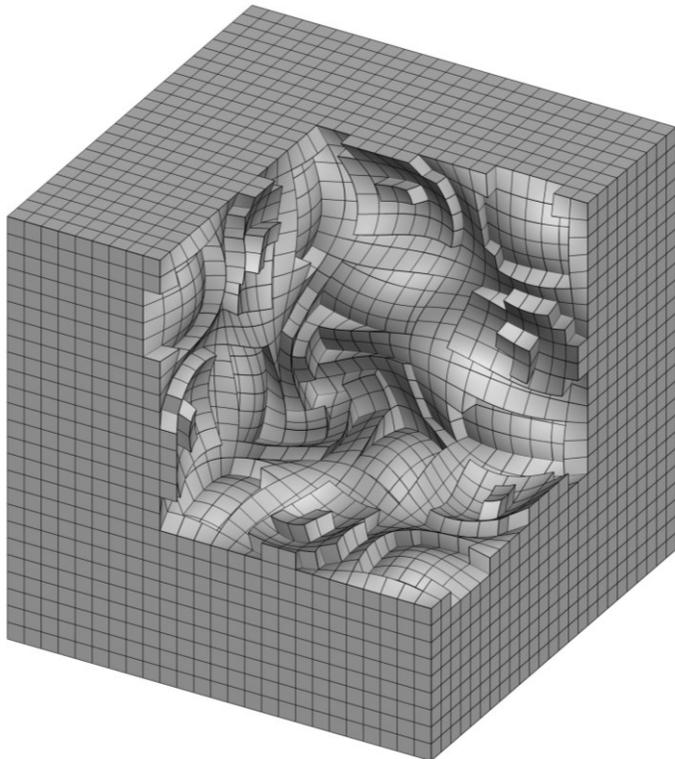

TAYLOR-GREEN VORTEX

Meshes & resolutions (Taylor-Green vortex)

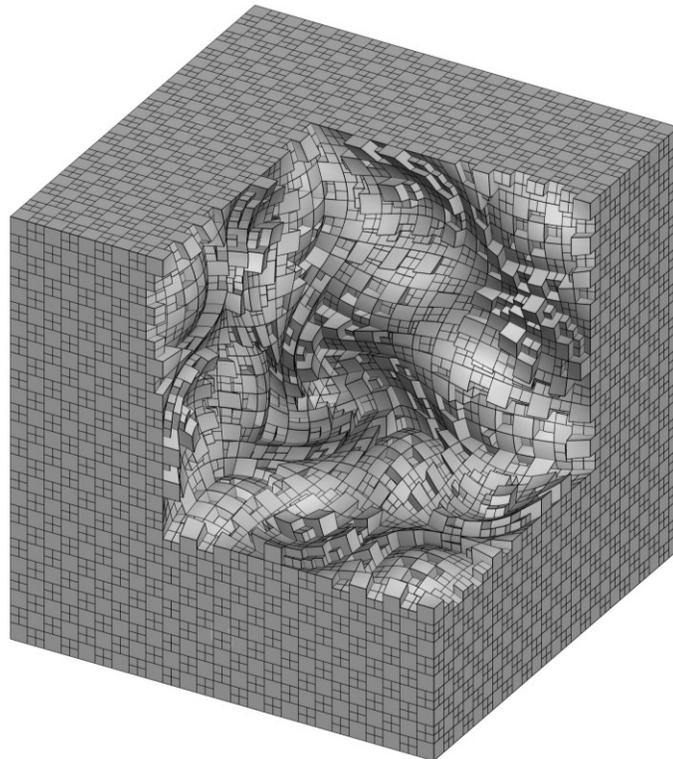

Parent

25^3 elements
 200^3 DOFs/eq

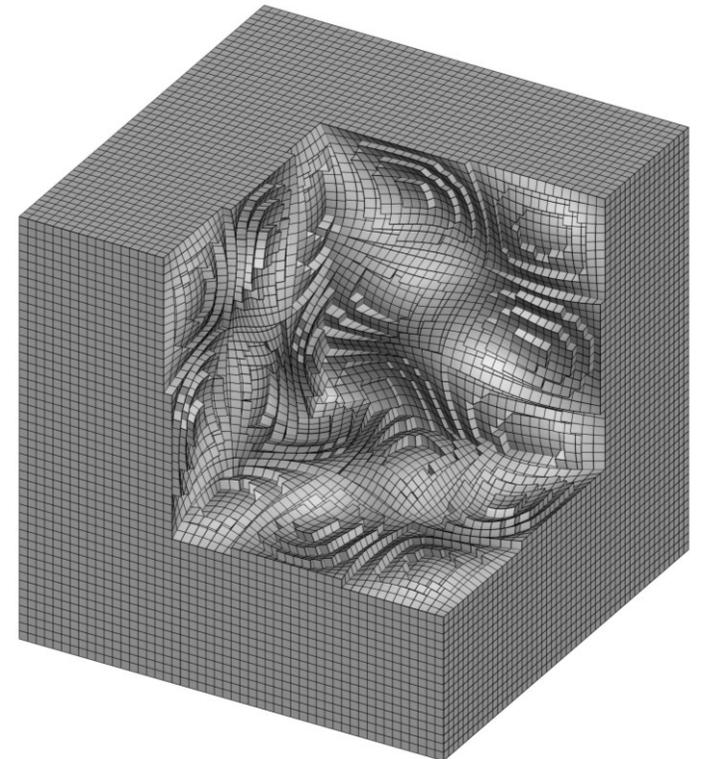

Locally refined

$\sim 41^3$ elements
 $\sim 330^3$ DOFs/eq

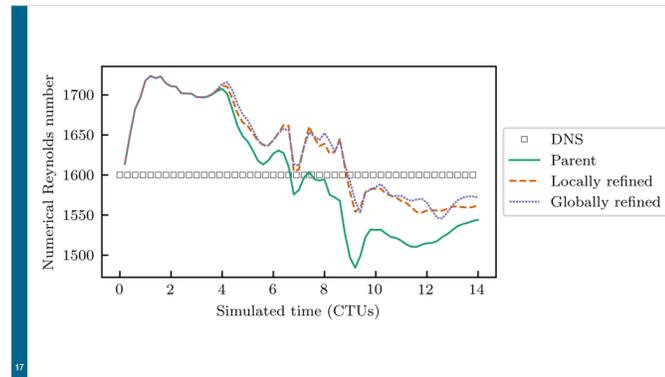

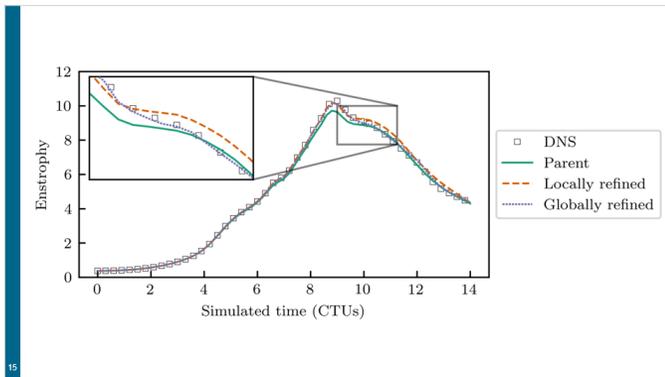

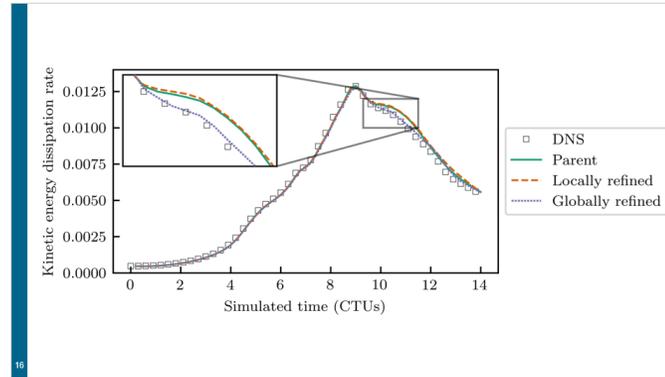

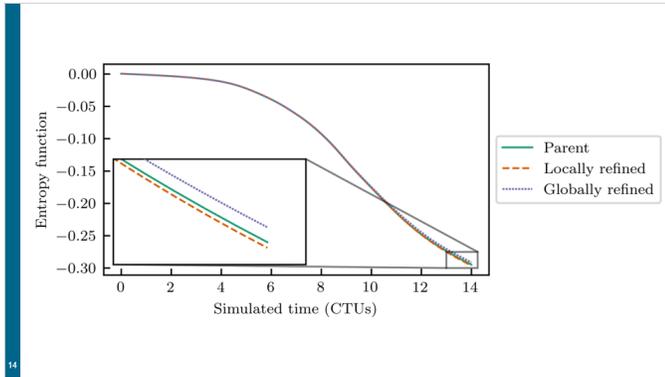

Globally refined

50^3 elements
 400^3 DOFs/eq

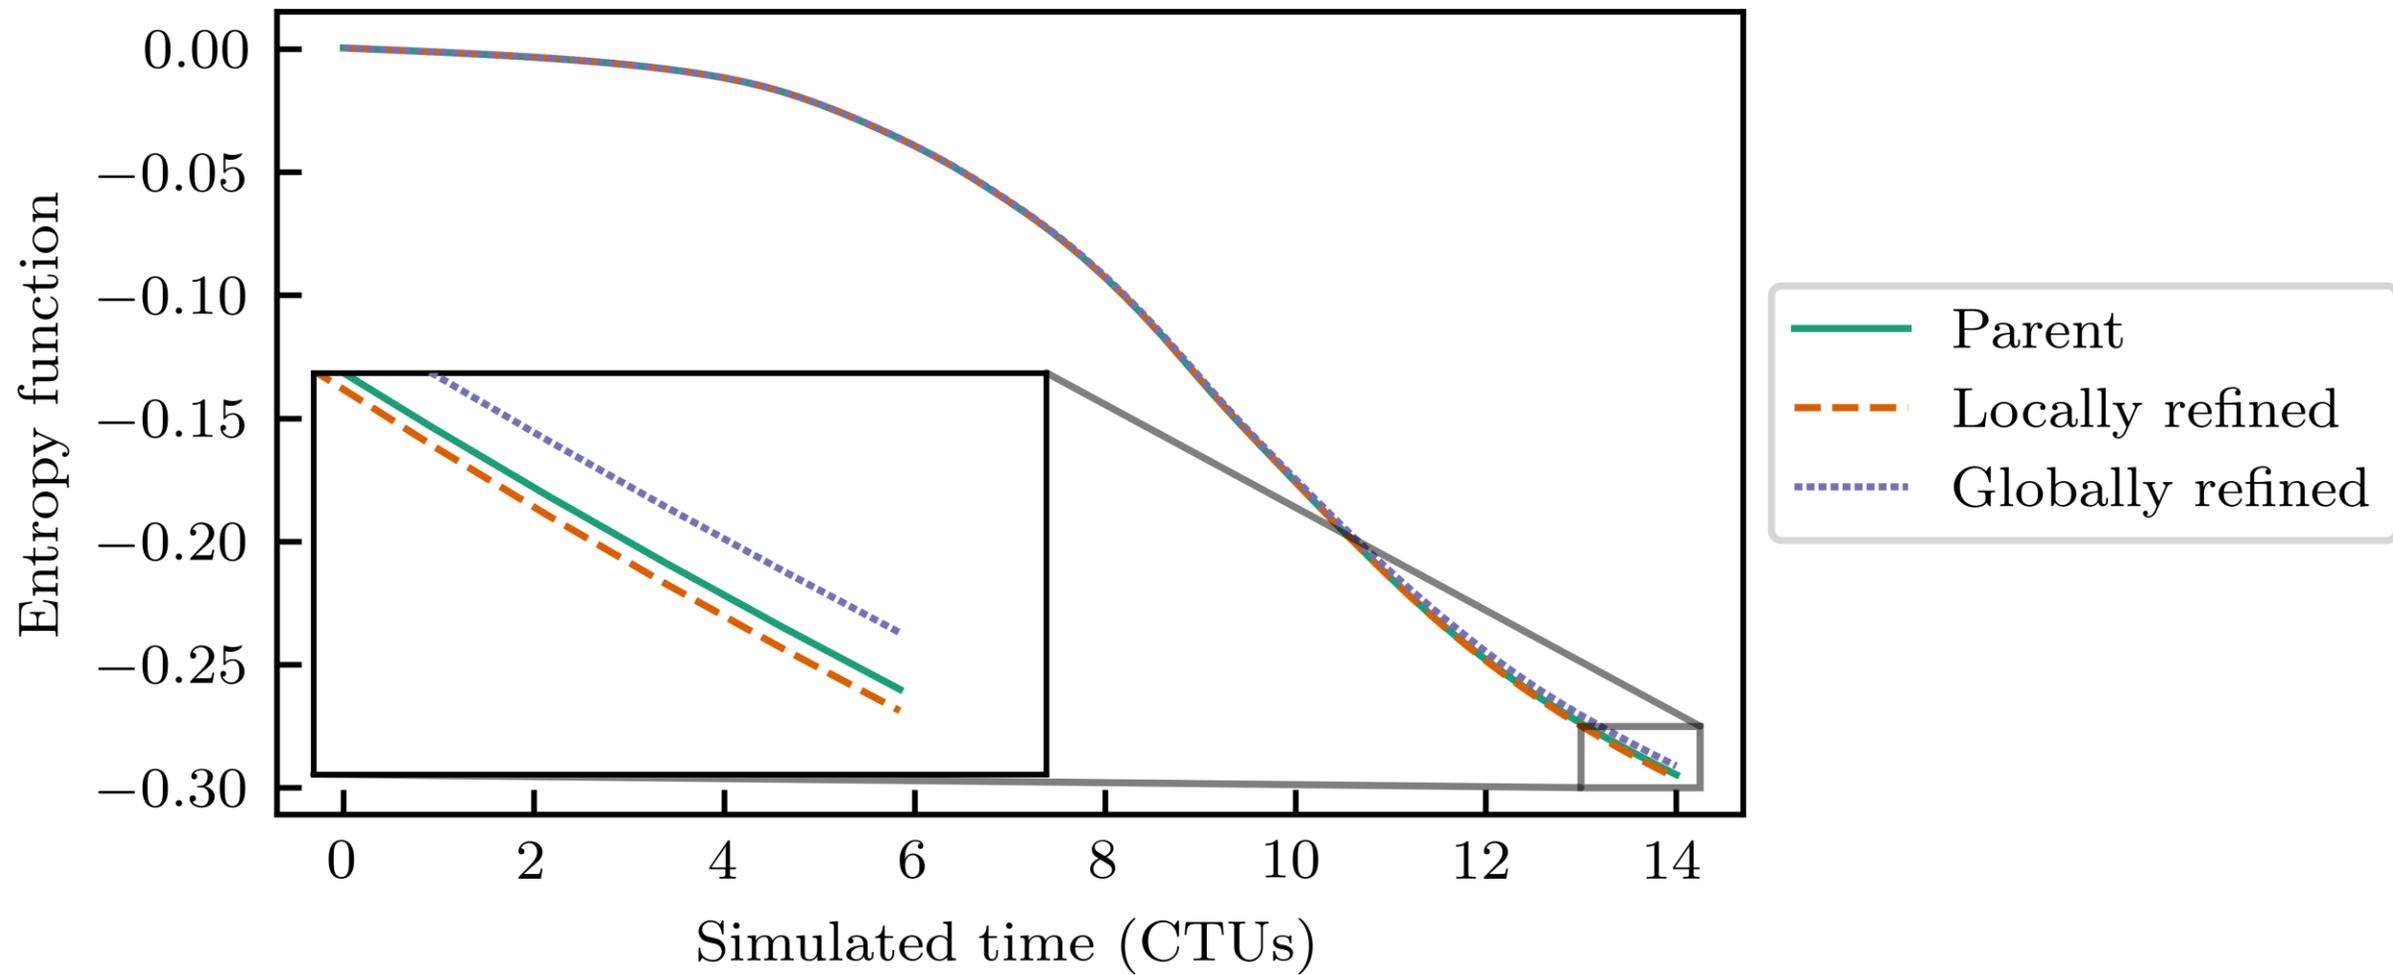

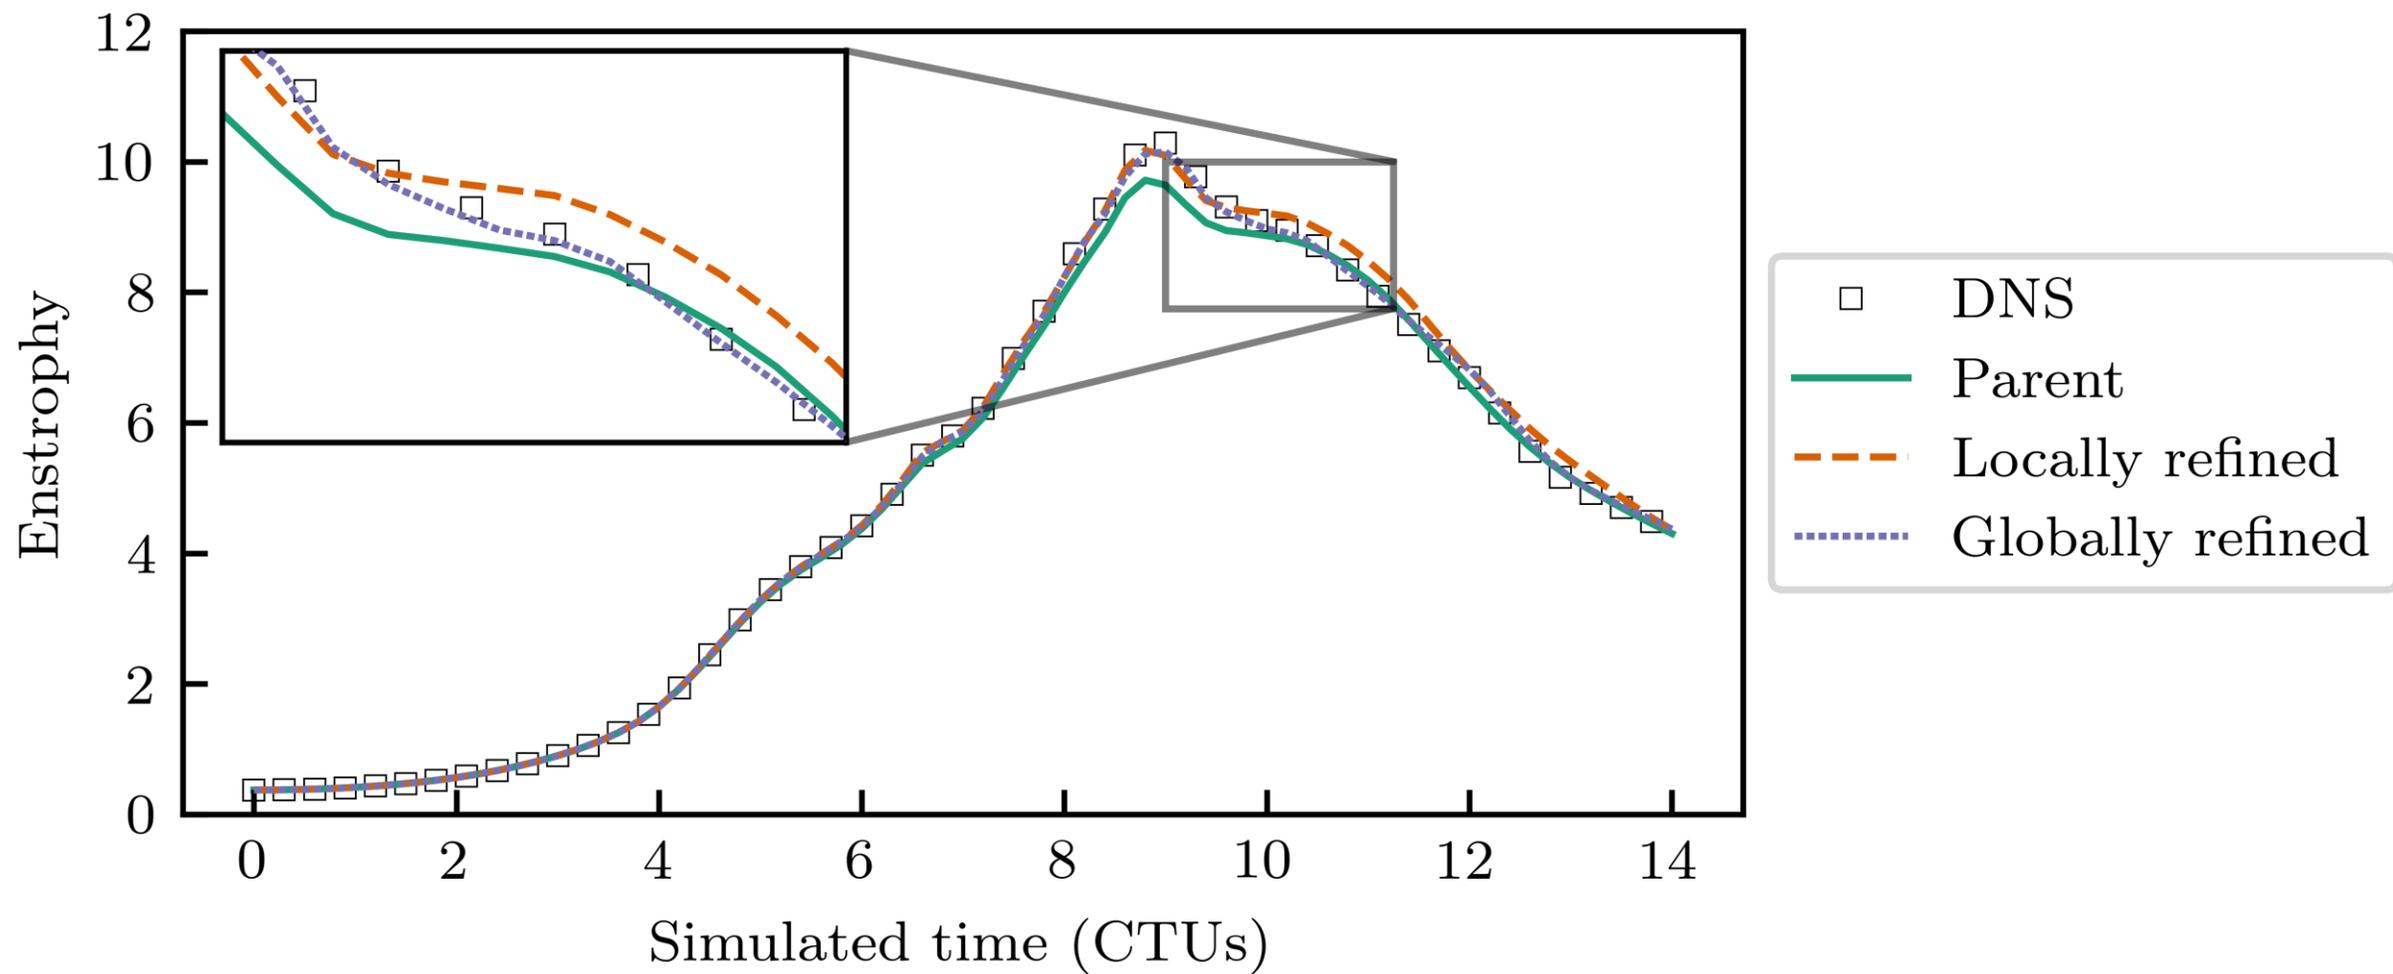

Results (Taylor-Green vortex; $Re = 1600$, $Ma = 0.1$)

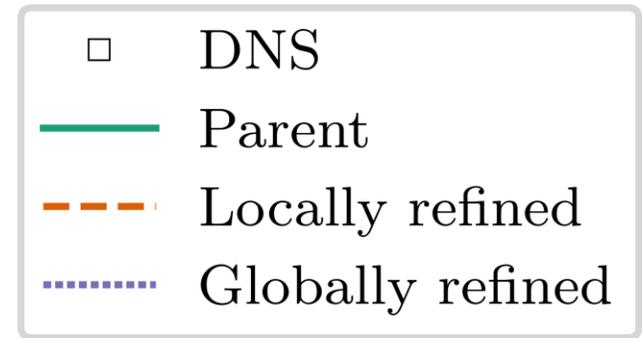

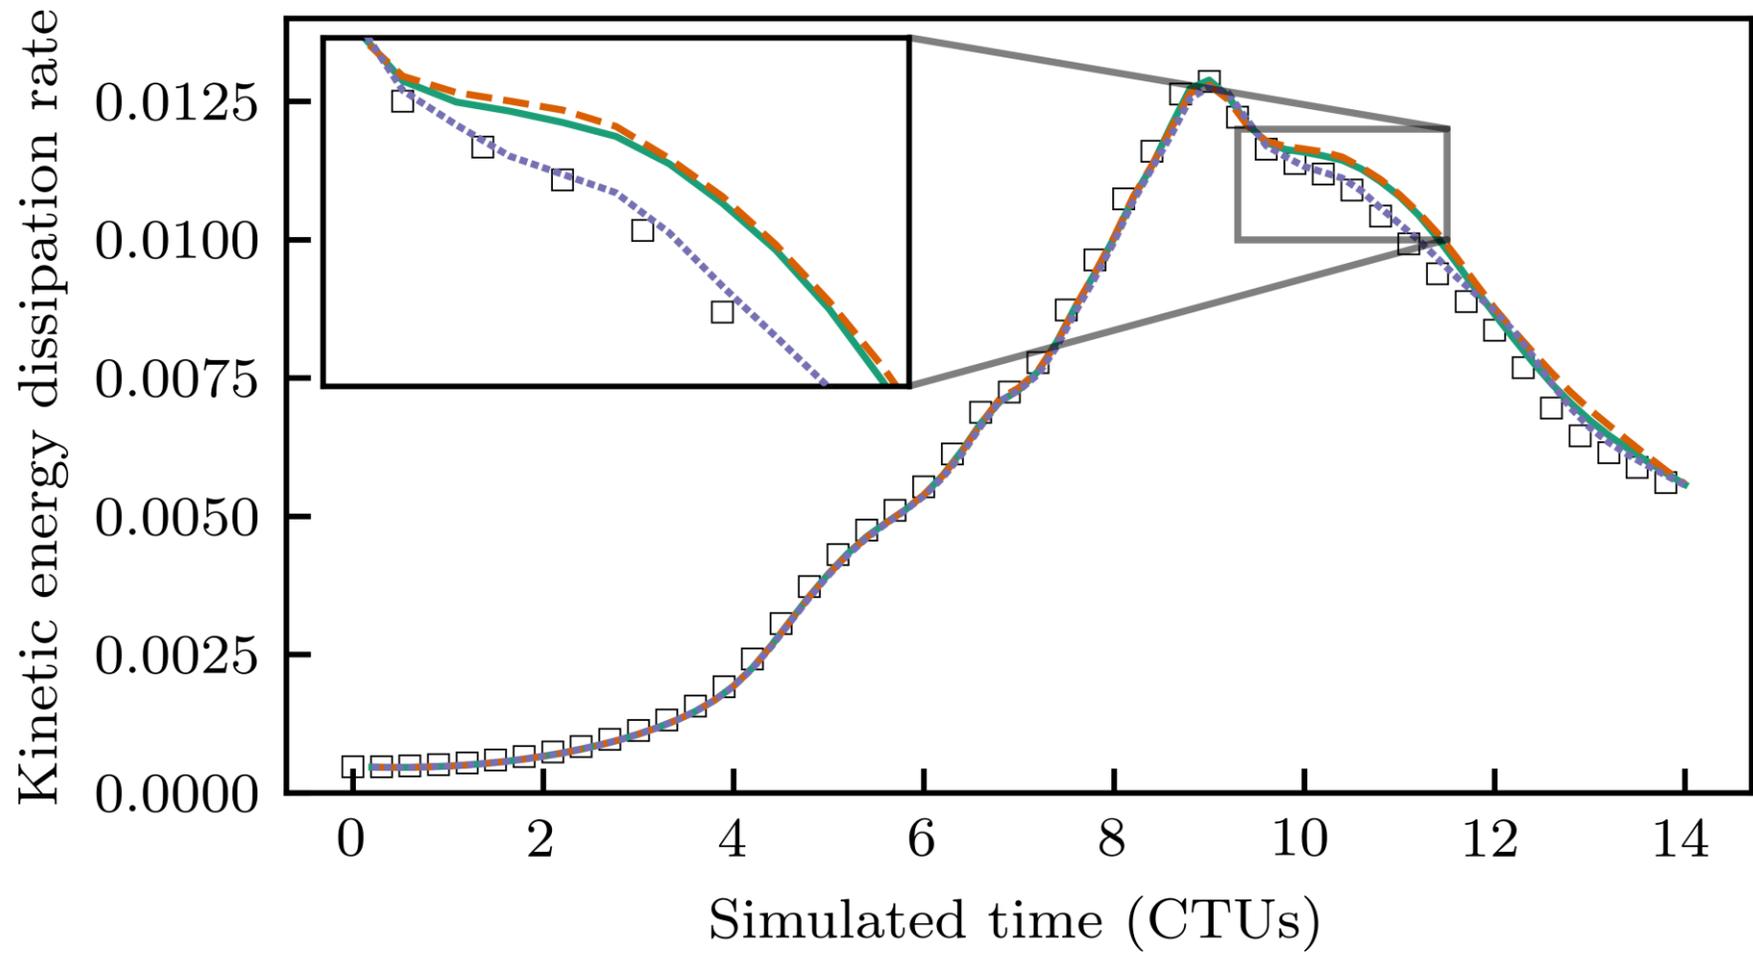

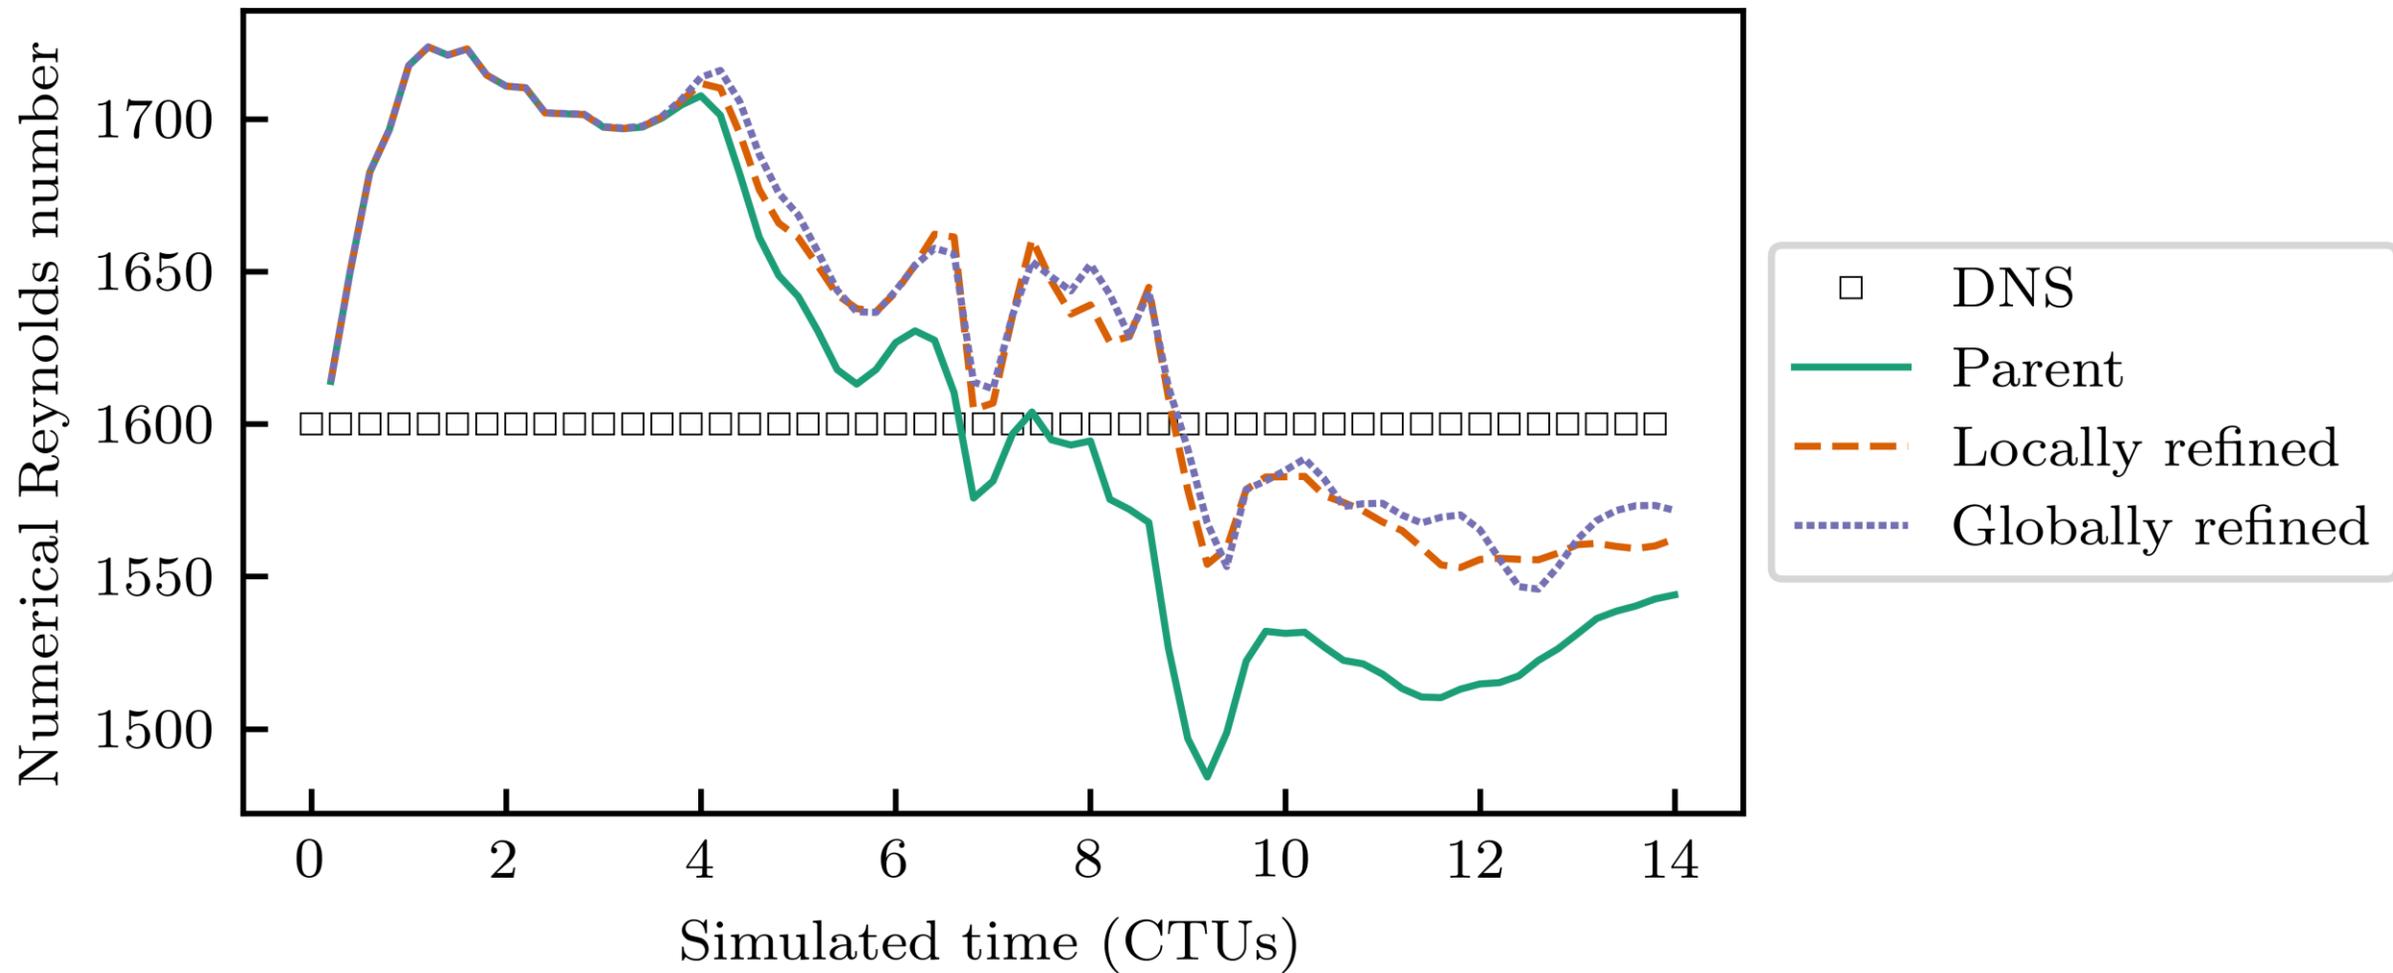

19

Relative to globally refined...	Parent	Locally refined
...CPU time	17%	140%
...# of DOFs	13%	56%
...# of faces	13%	74%

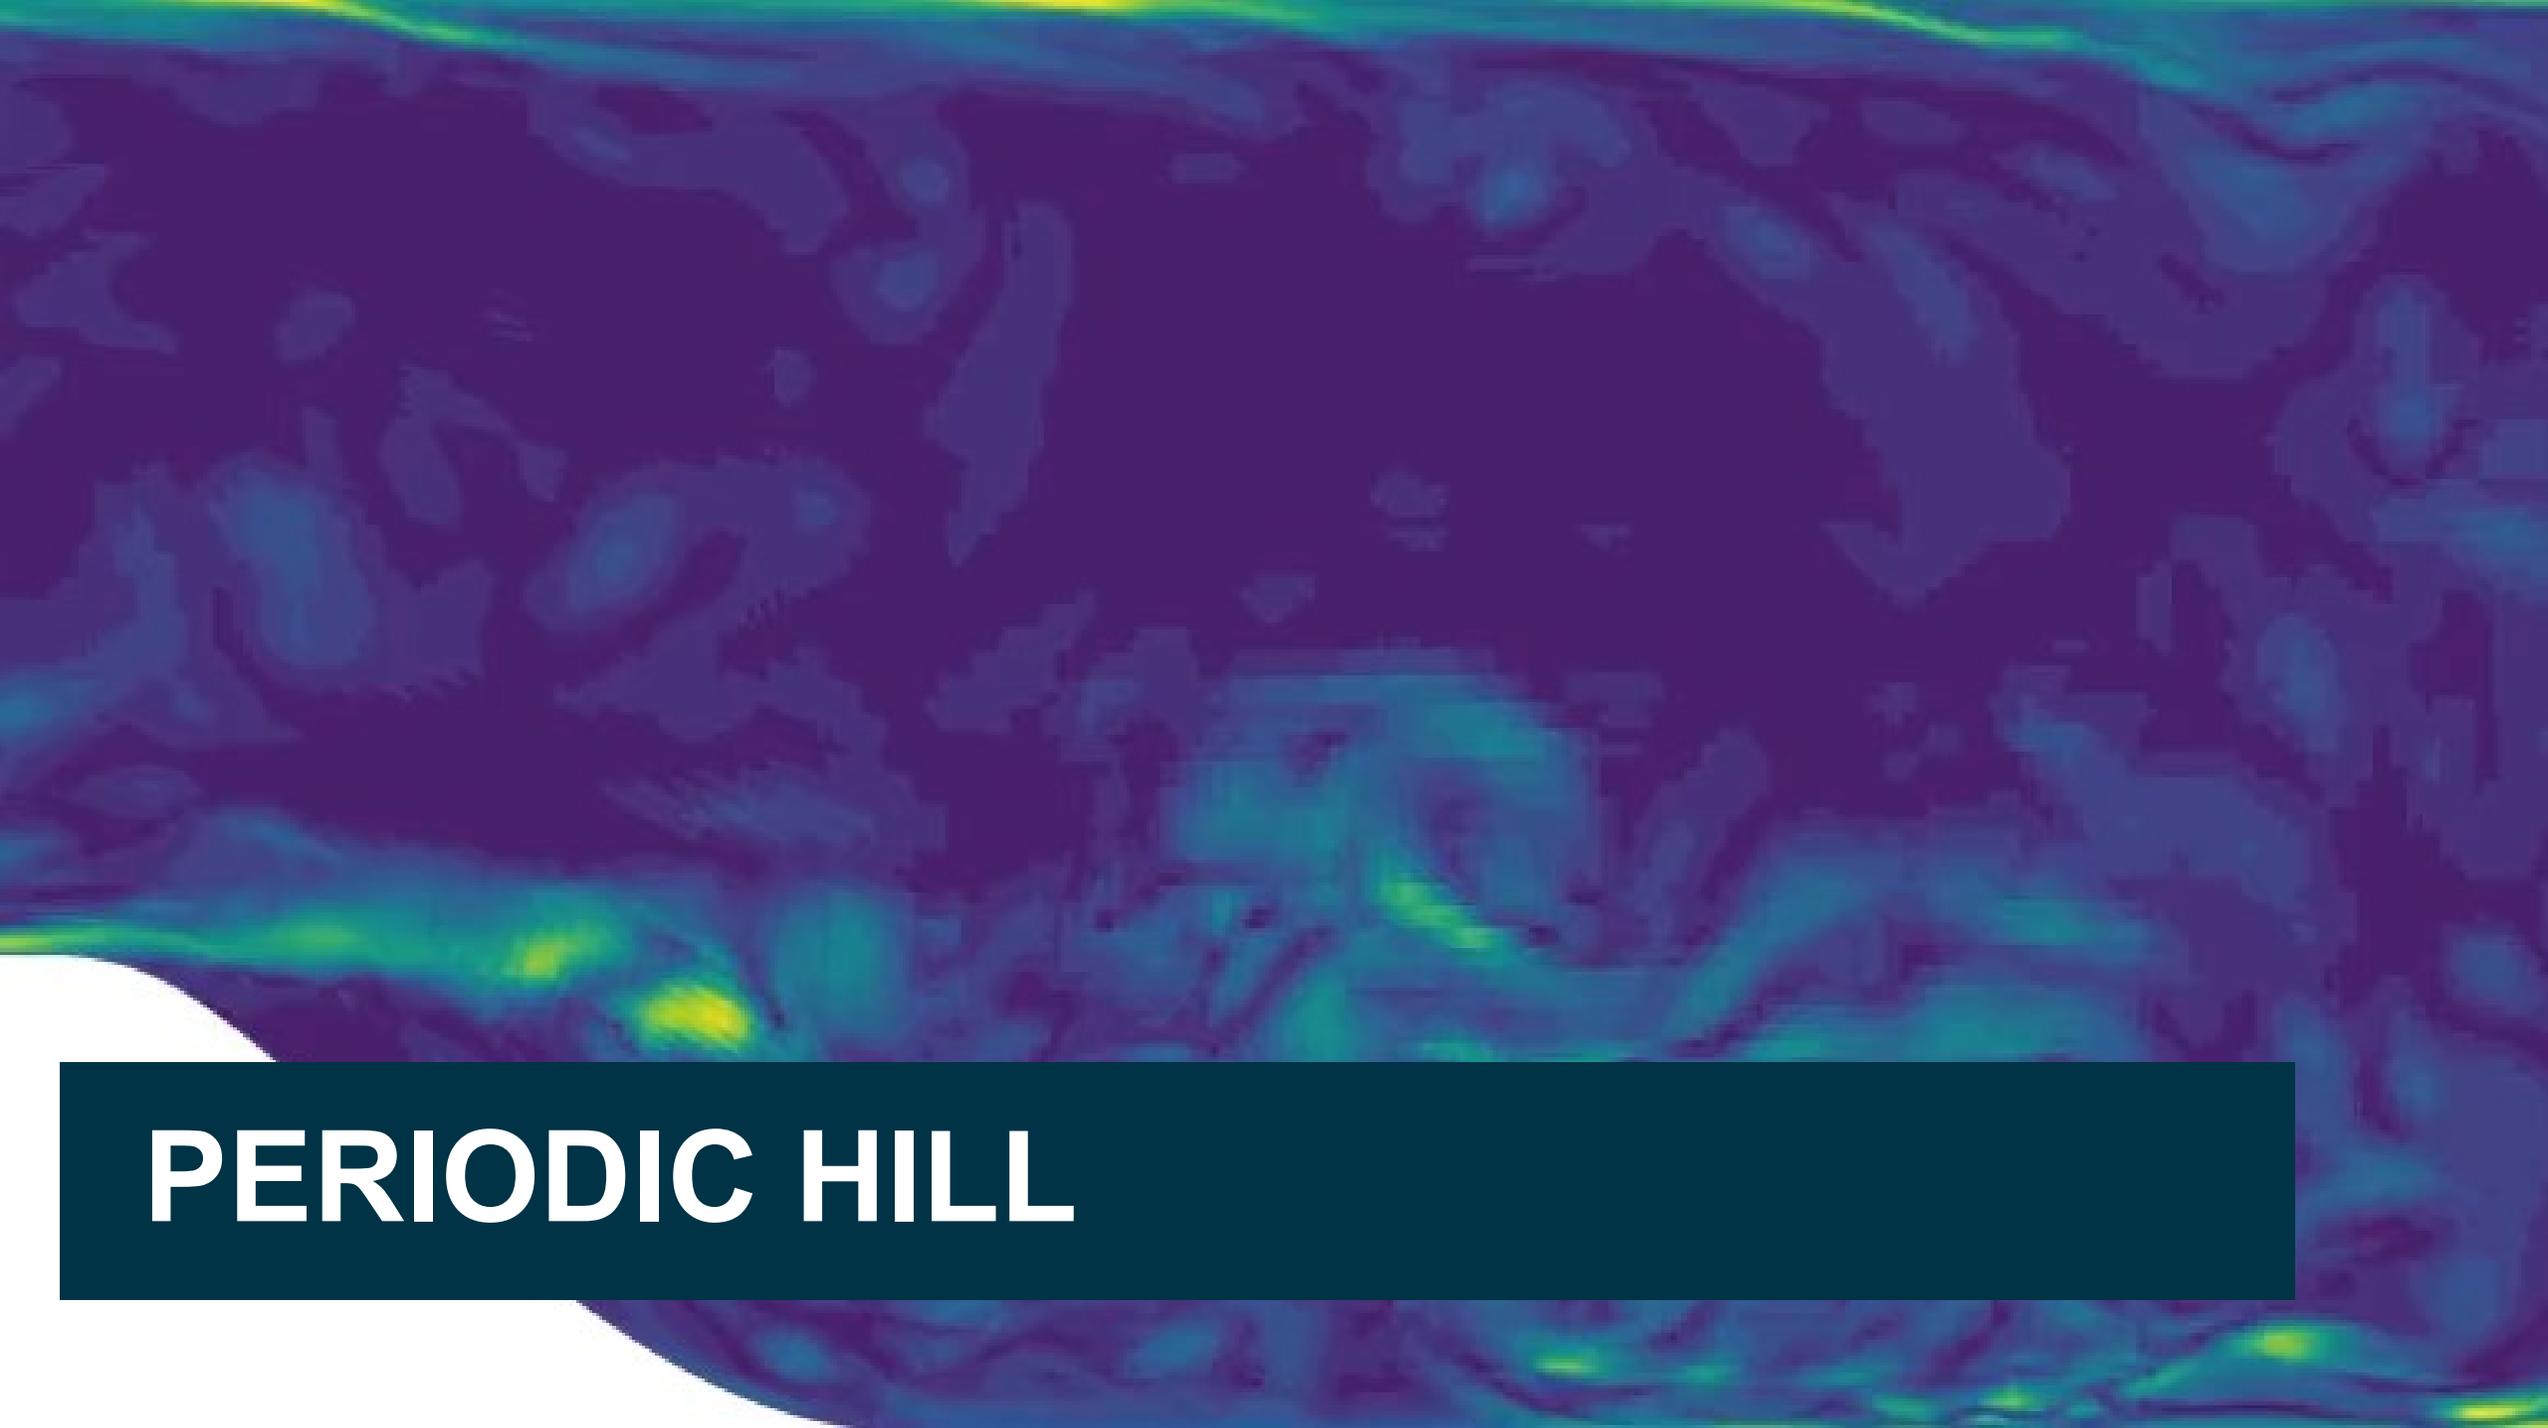

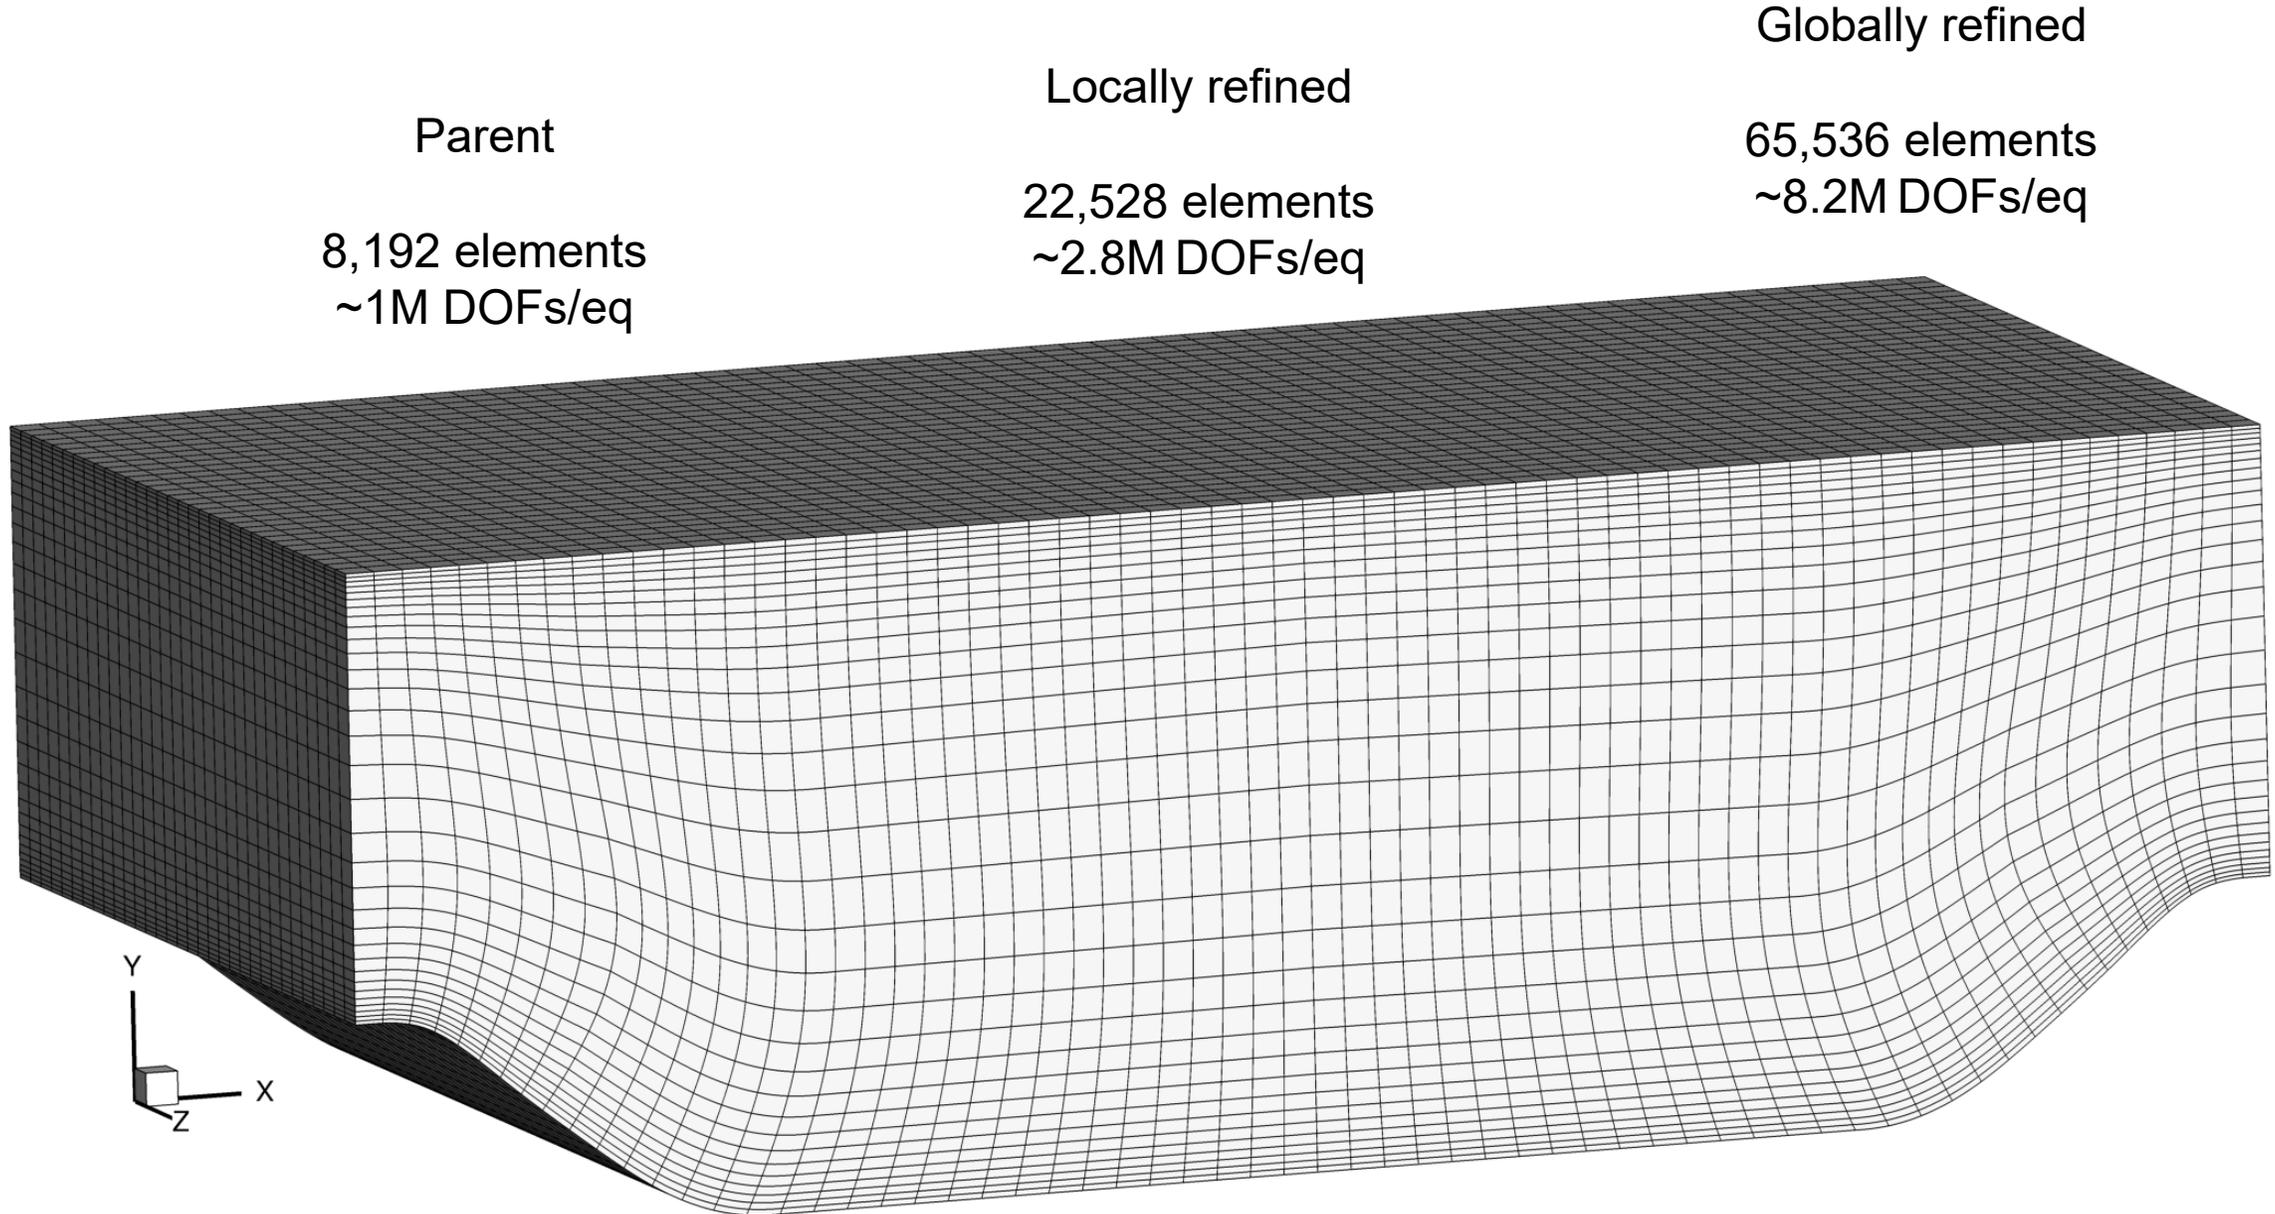

Relative to globally refined...	Parent	Locally refined
...CPU time	17%	140%
...# of DOFs	13%	56%
...# of faces	13%	74%

An aerial photograph of a forest with a repeating pattern of hills and valleys. The terrain is covered in dense green trees. A dark teal banner is positioned at the bottom of the image, containing the text 'PERIODIC HILL' in white, bold, uppercase letters.

PERIODIC HILL

Meshes & resolutions (periodic hill)

Parent

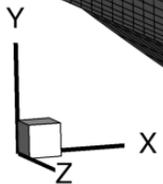

8,192 elements
~1M DOFs/eq

Locally refined

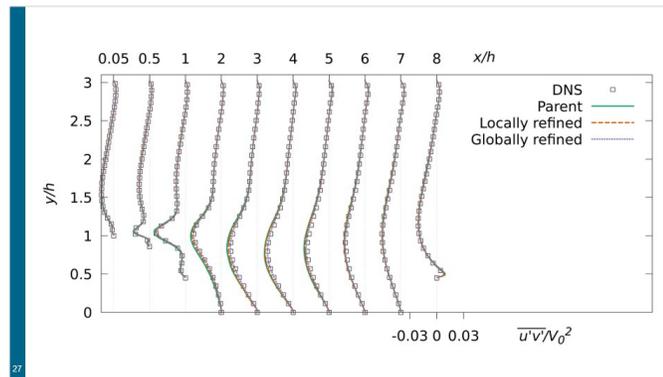

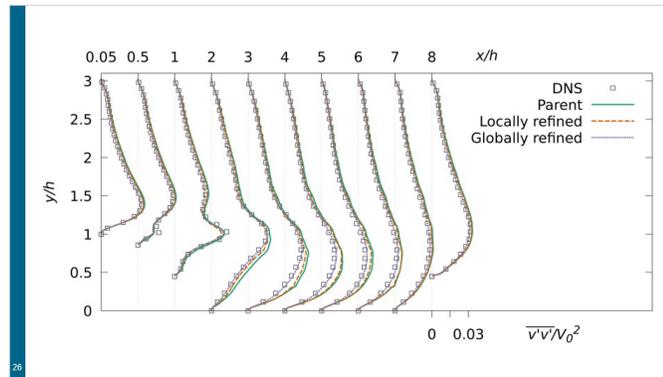

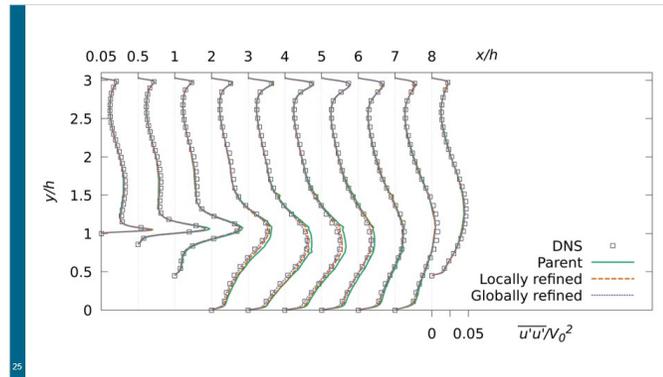

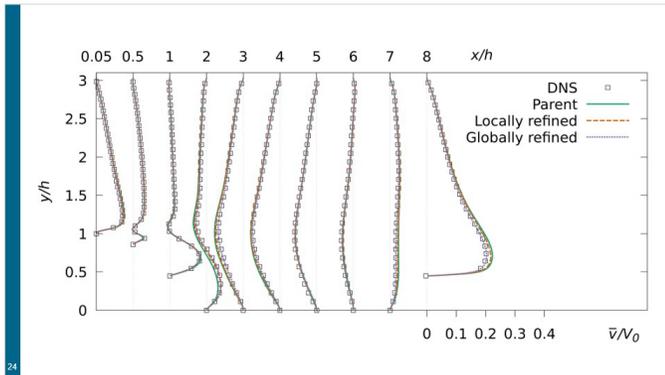

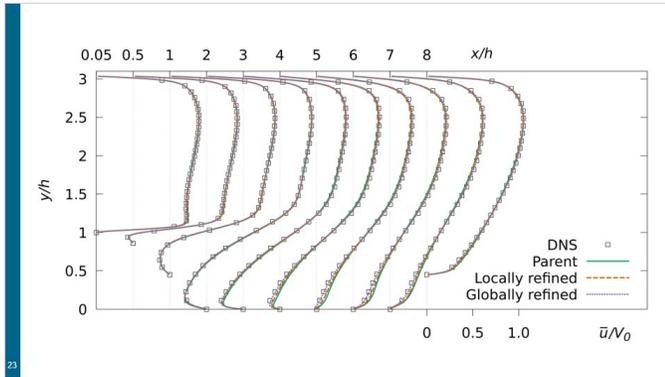

22,528 elements
~2.8M DOFs/eq

Globally refined

65,536 elements
~8.2M DOFs/eq

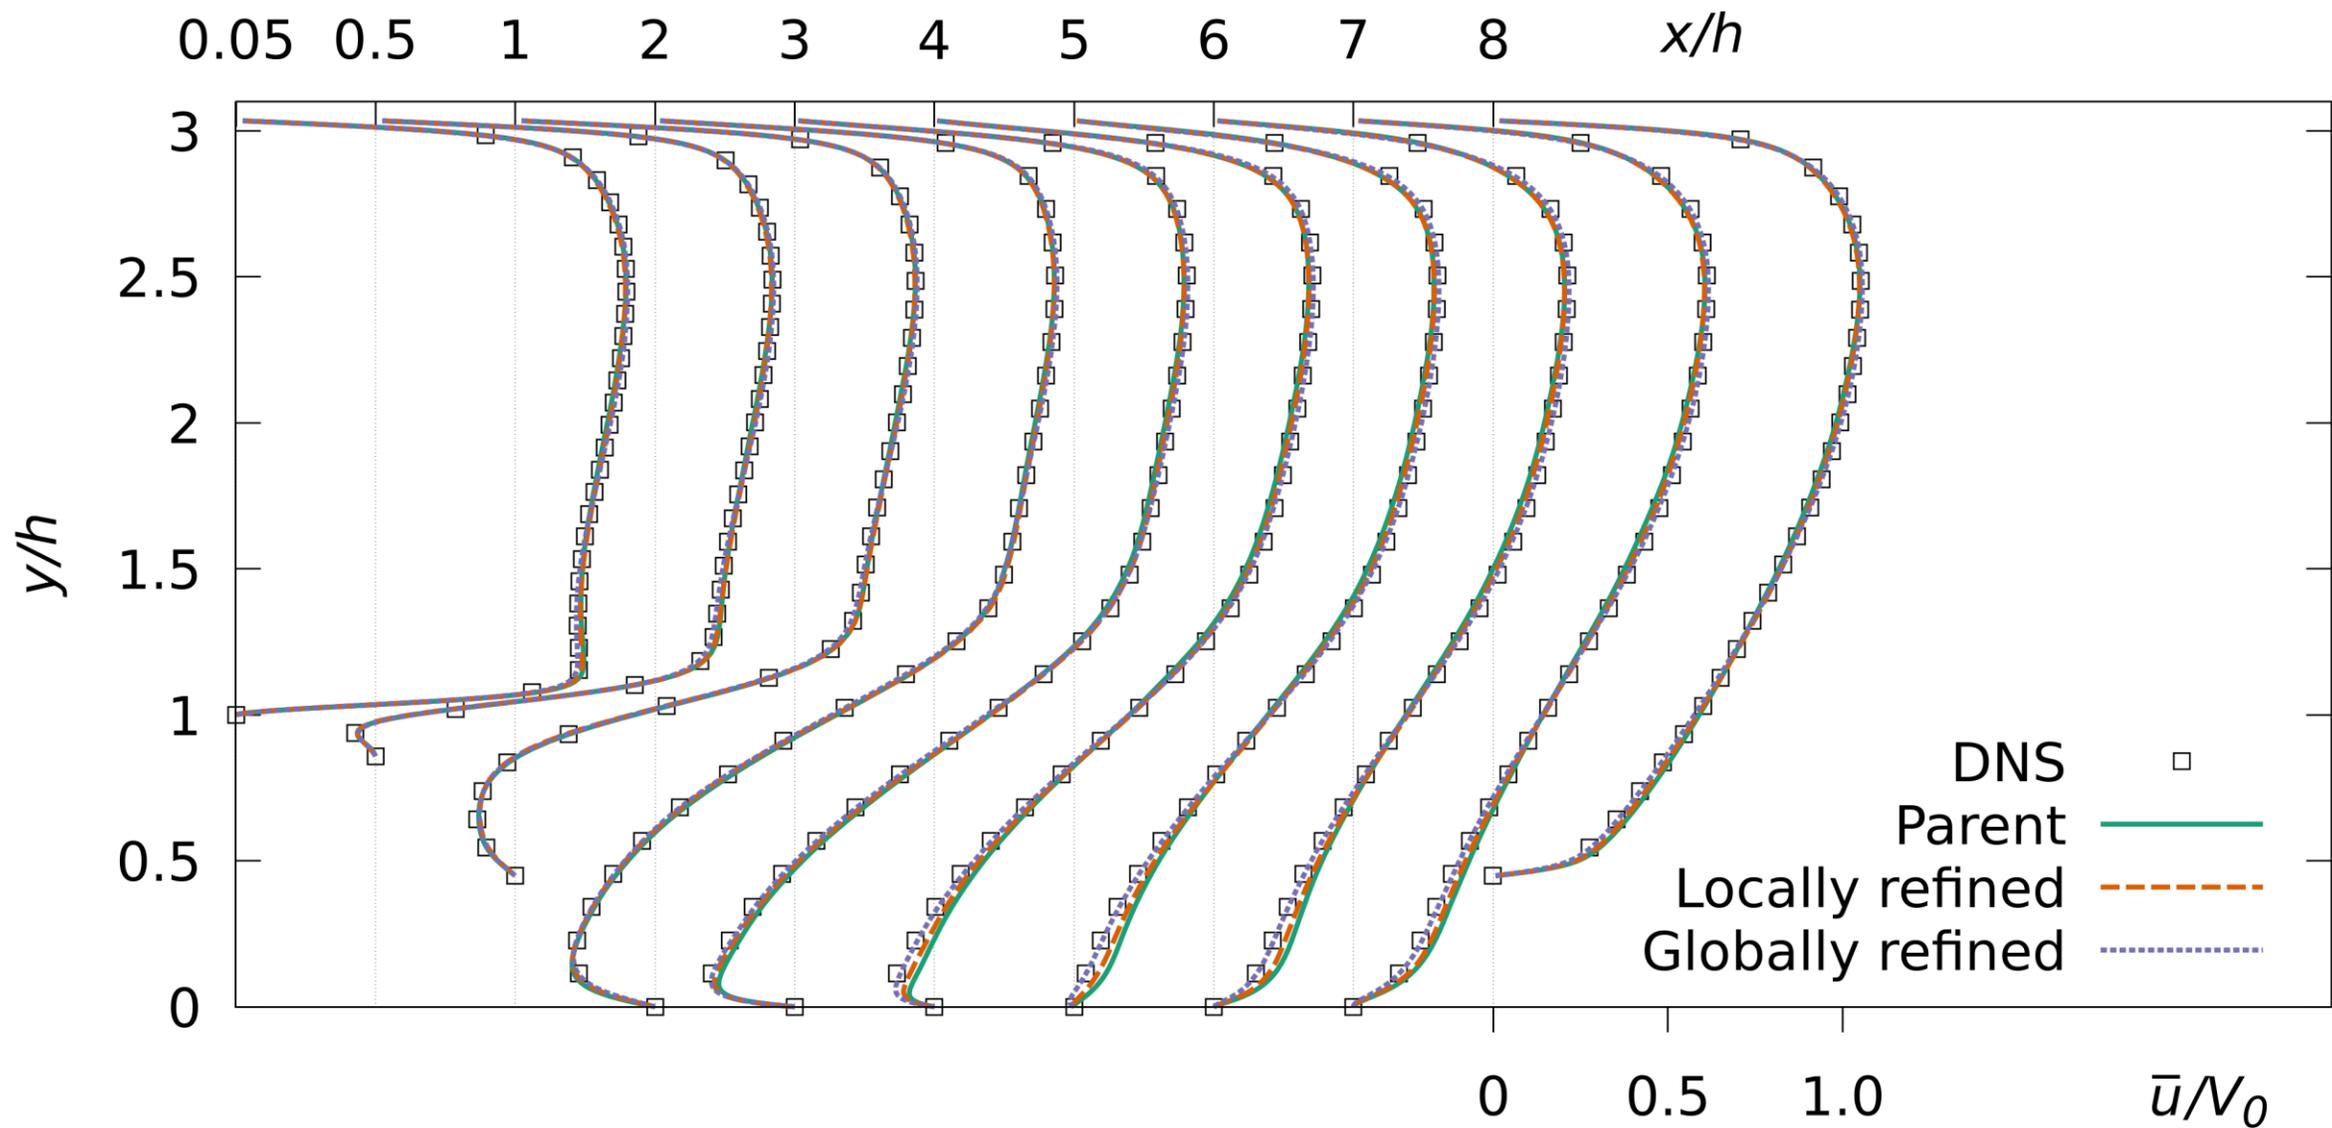

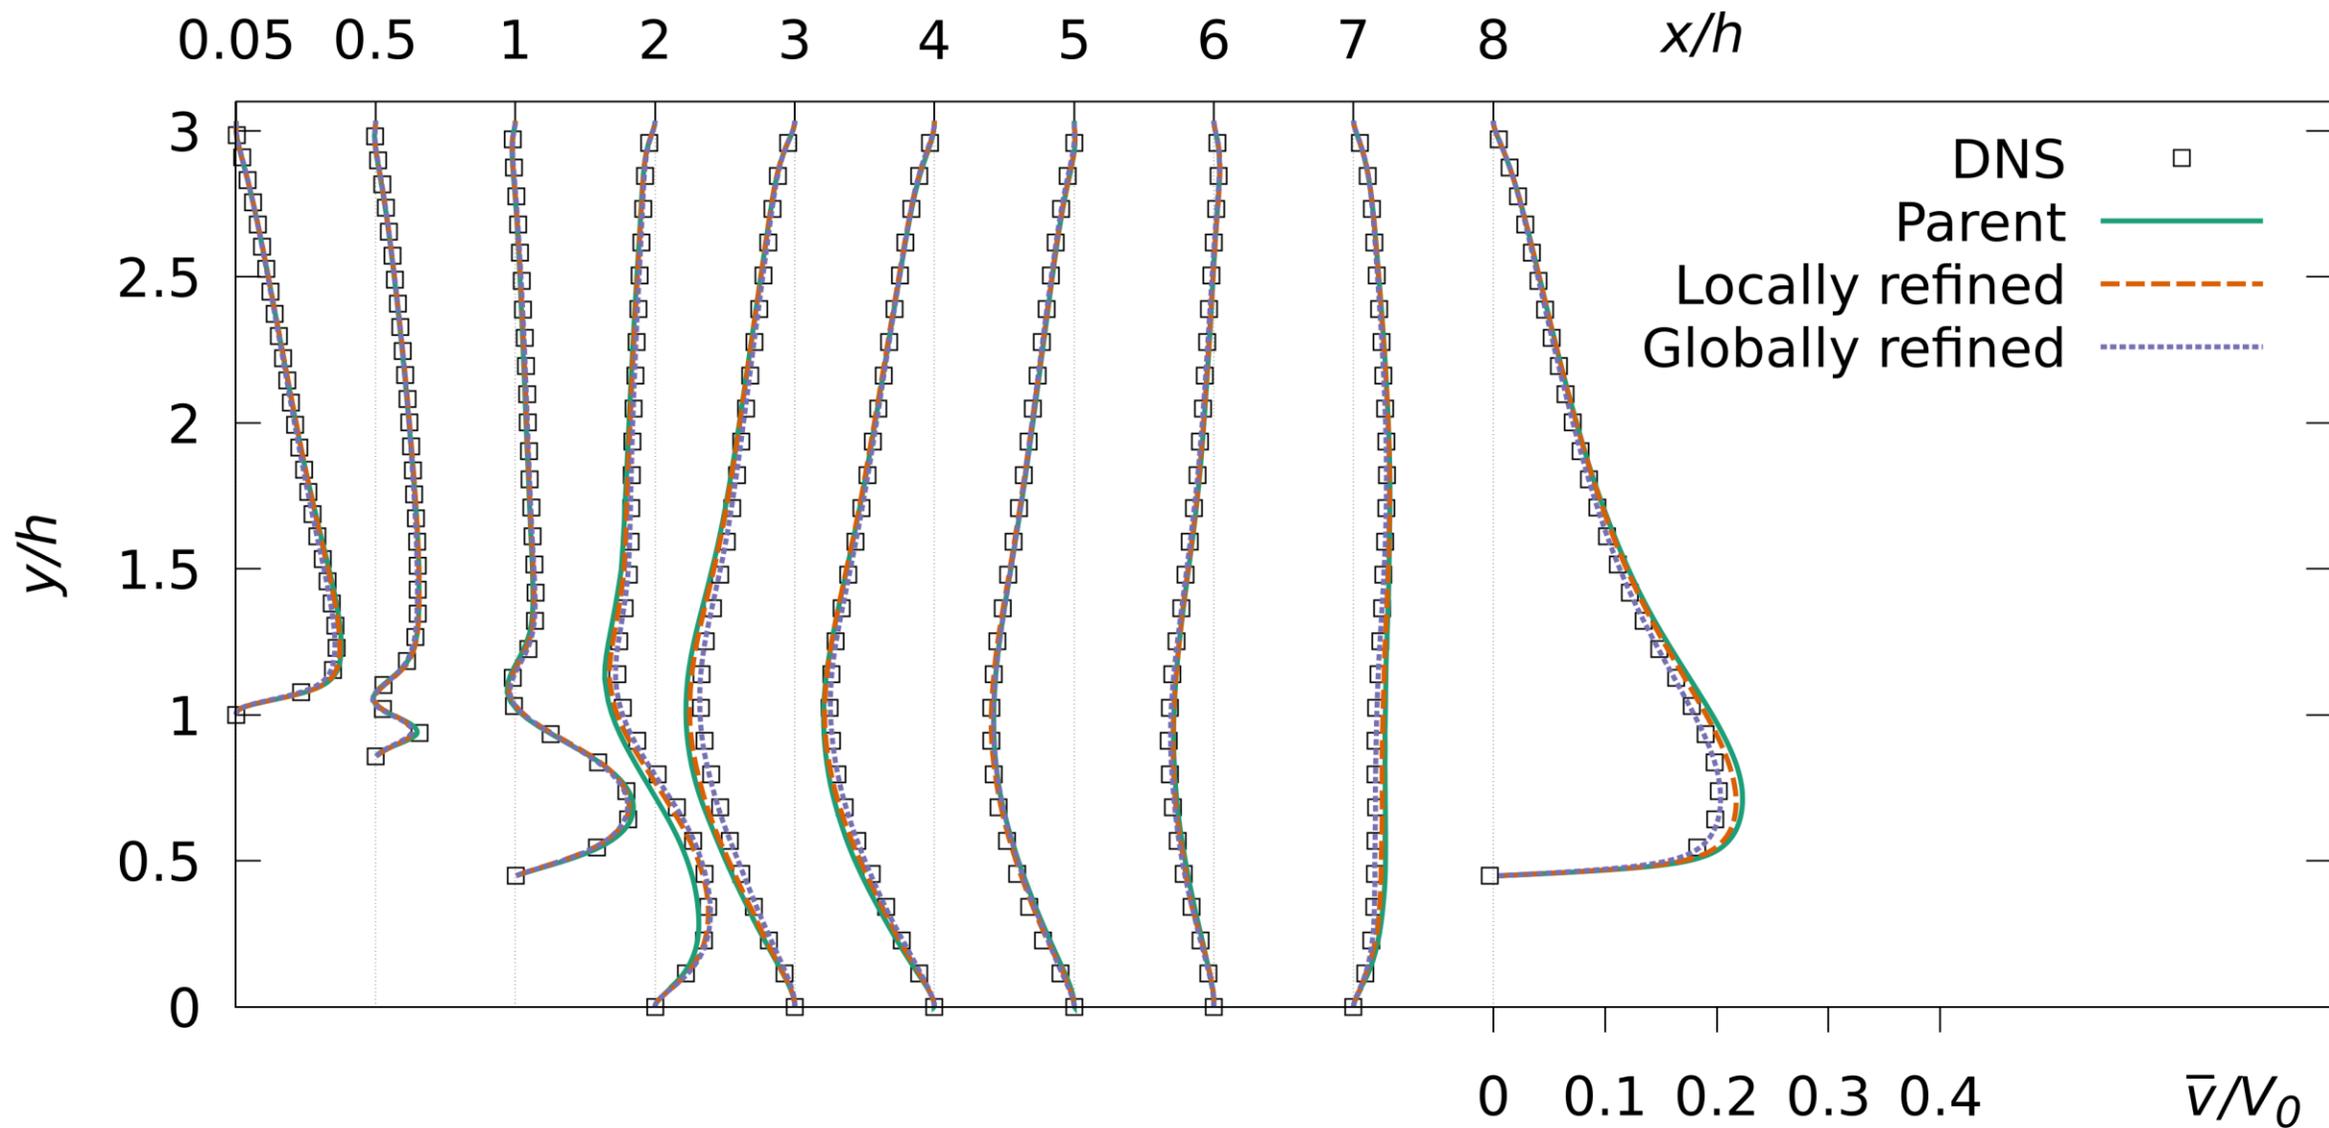

Results (periodic hill; Re = 2800, Ma = 0.1)

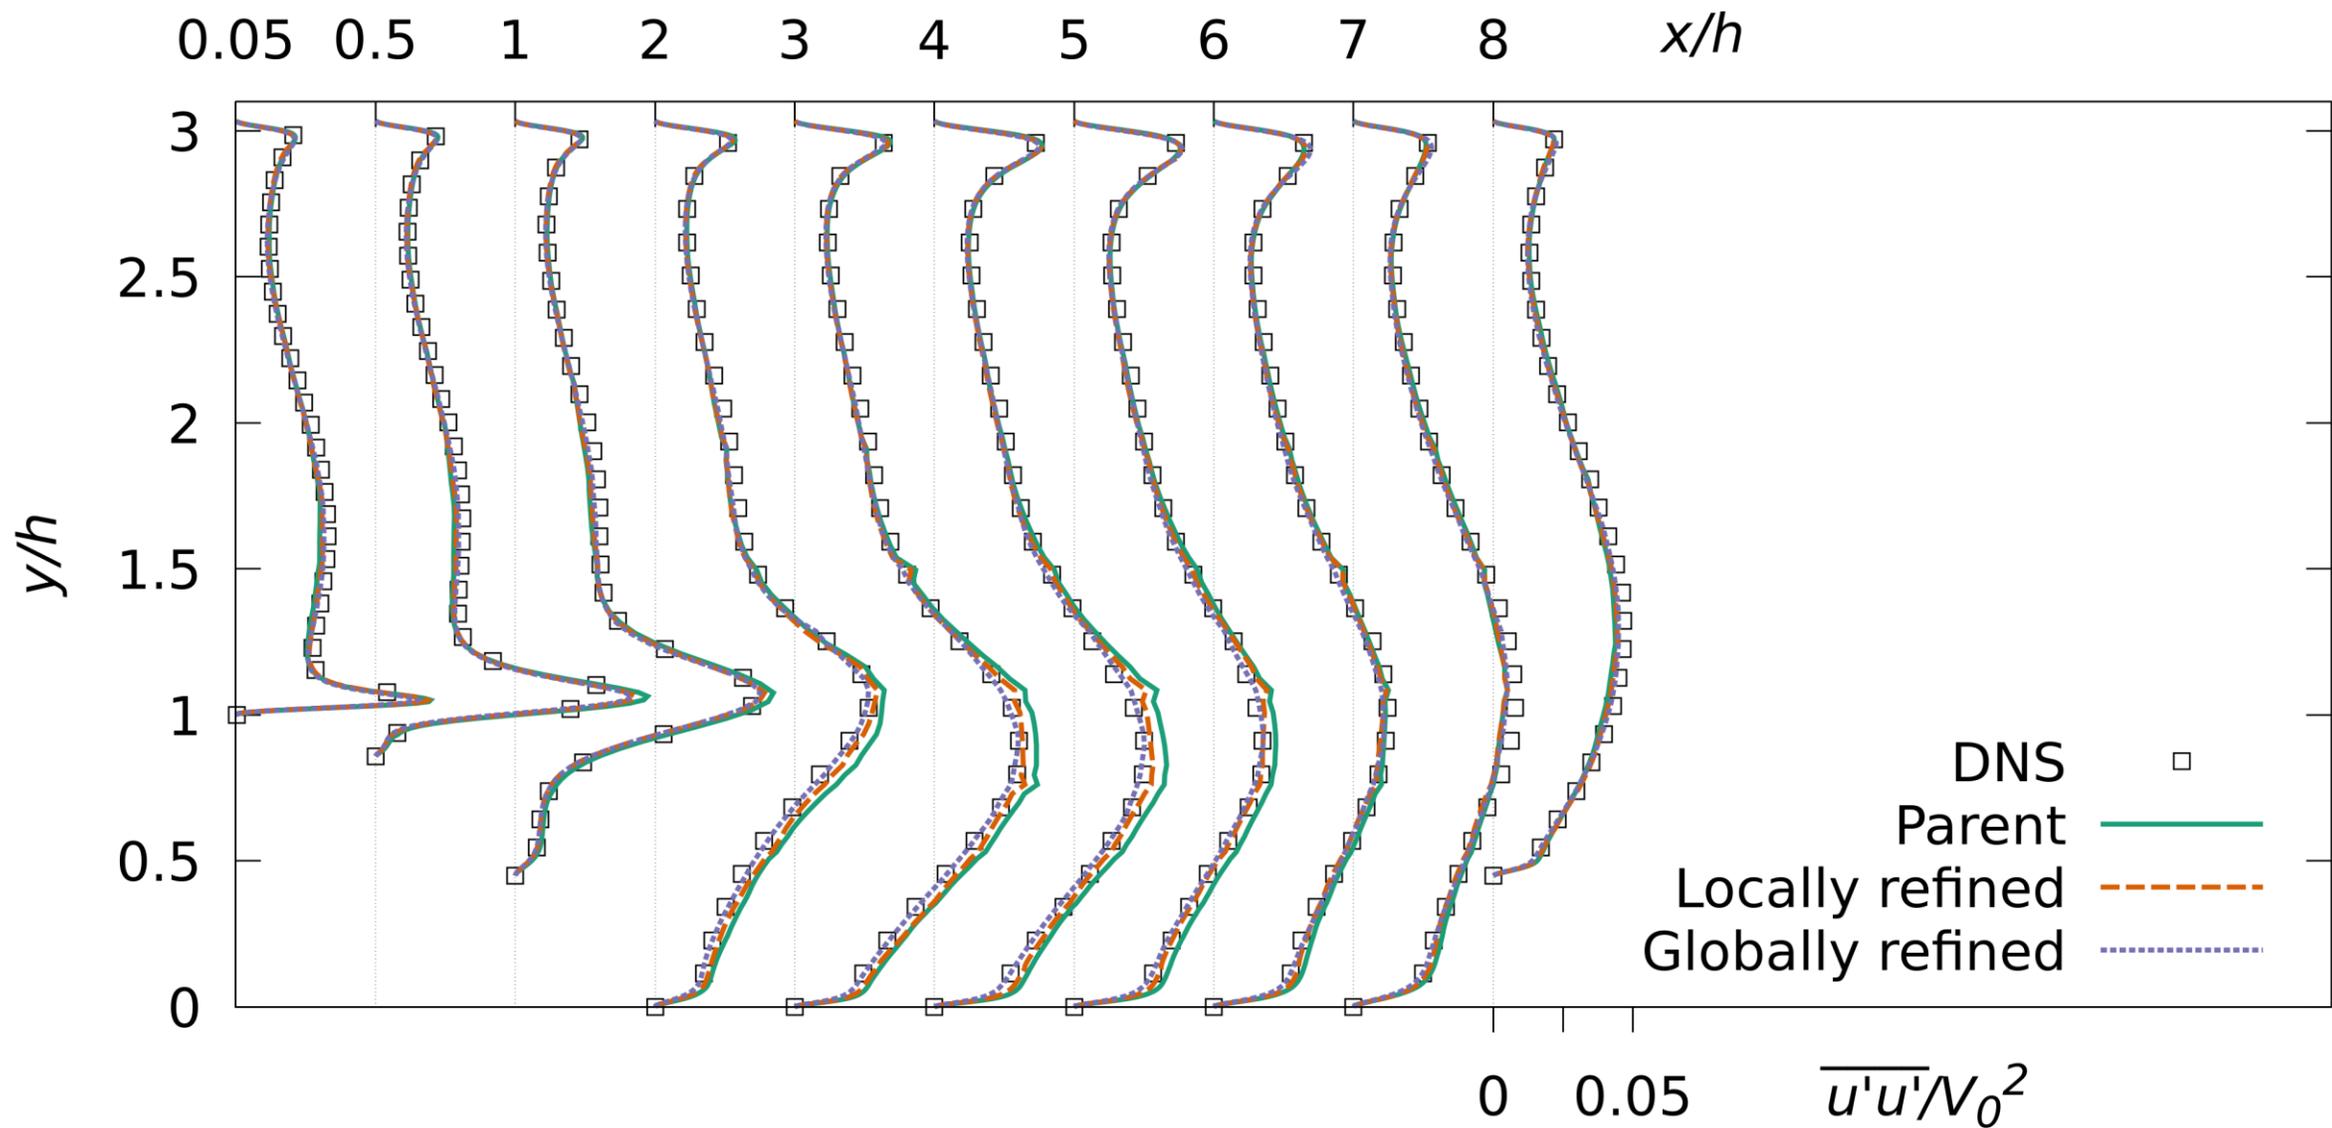

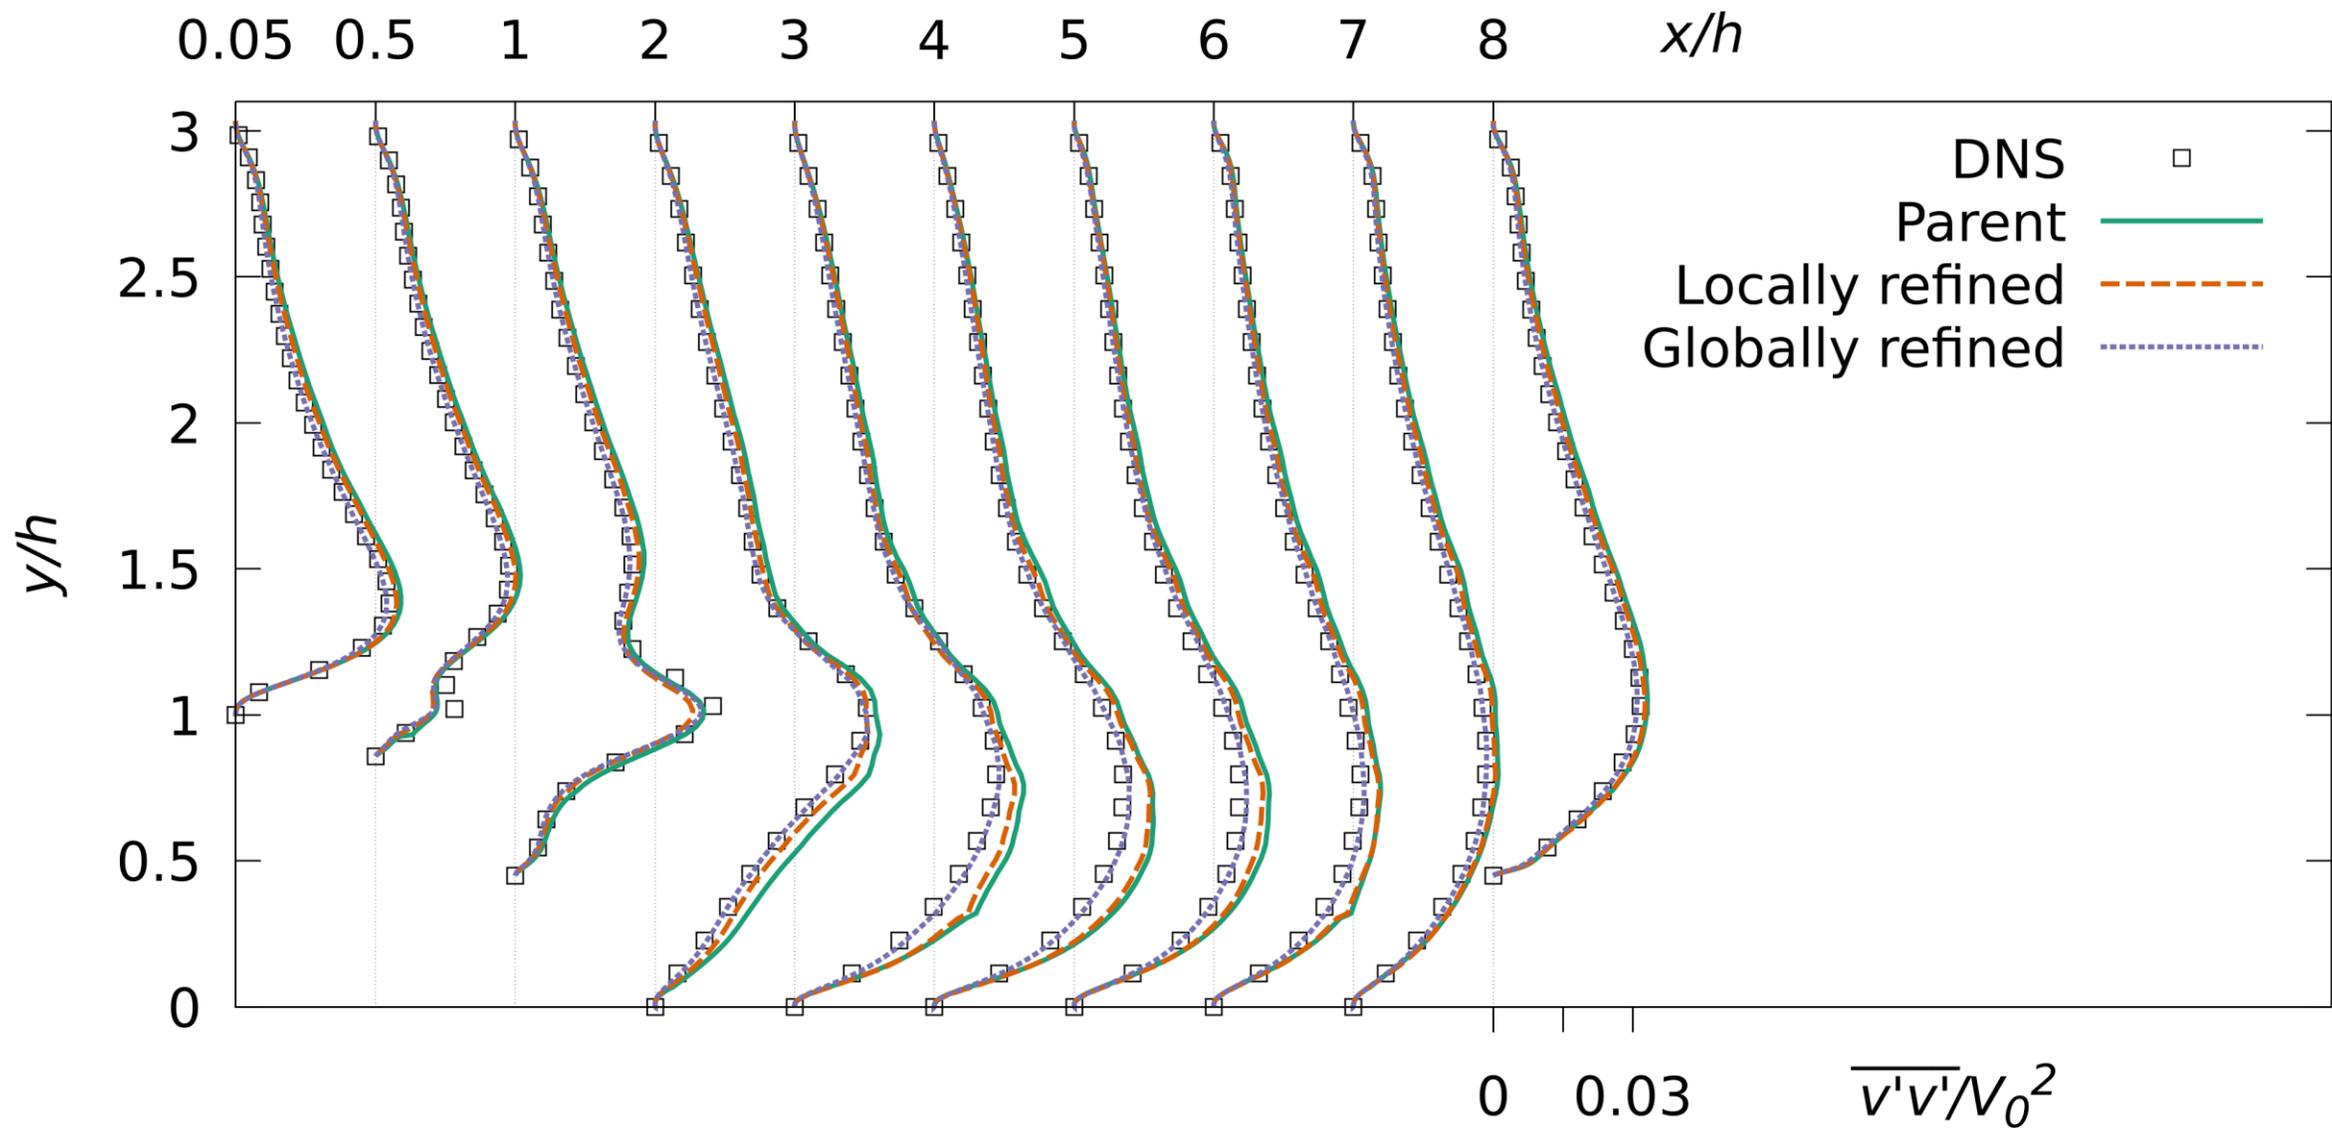

29

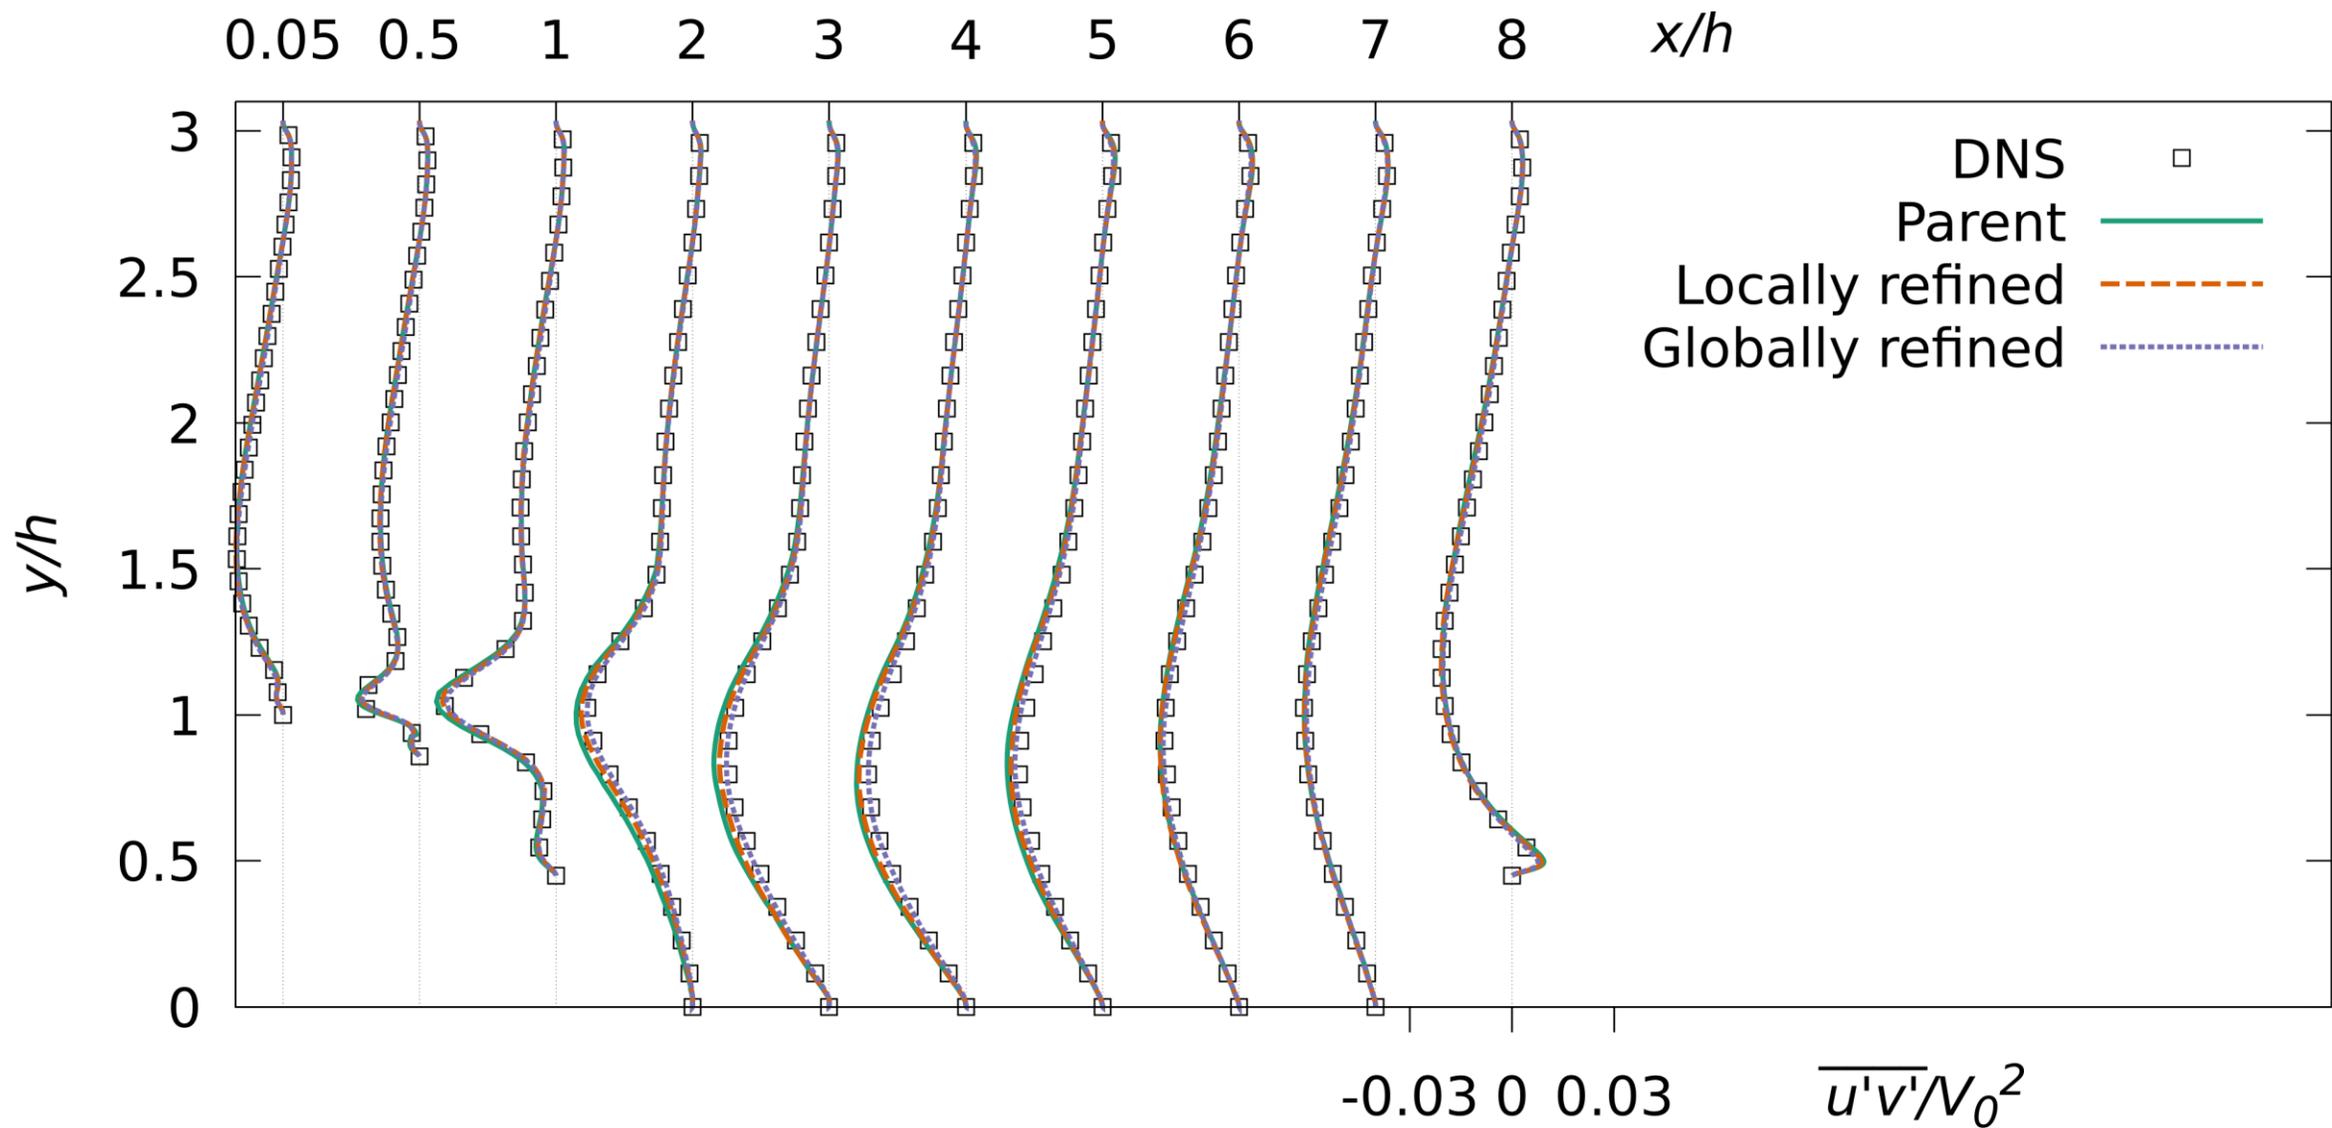

Relative to globally refined...	Parent	Locally refined
...CPU time (averaging period only)	19%	54%
...# of DOFs	13%	34%

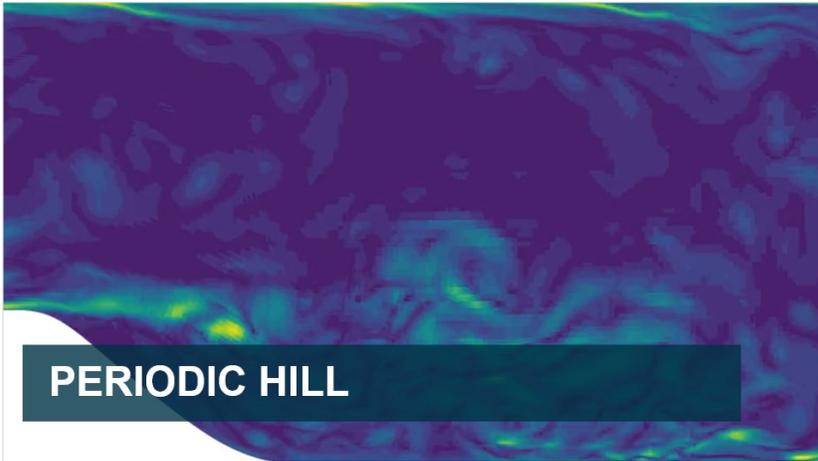

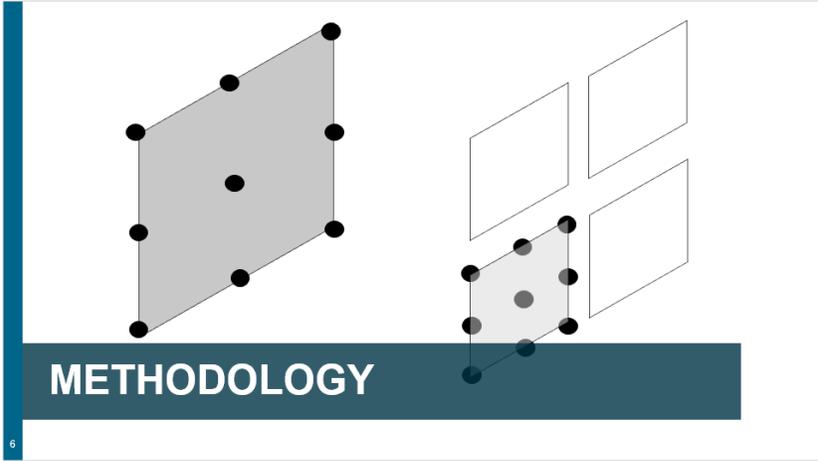

Relative to globally refined...	Parent	Locally refined
...CPU time (averaging period only)	19%	54%
...# of DOFs	13%	34%
