

Telerobotics and Haptics

Actual and Future Research Questions and Applications

Carsten Preusche

Institute of Robotics and Mechatronics
German Aerospace Center (DLR)

IST'06 - Advanced Haptics Workshop

1 Introduction

- What is Telerobotics?
- Haptics in Telerobotics
- Telepresence

2 Research Issues

- Systems
 - Telerobots
 - Haptic Interfaces
- Control
 - Supervisory Control
 - Bilateral Control

3 Applications

4 Summary

1 Introduction

- What is Telerobotics?
- Haptics in Telerobotics
- Telepresence

2 Research Issues

- Systems
 - Telerobots
 - Haptic Interfaces
- Control
 - Supervisory Control
 - Bilateral Control

3 Applications

4 Summary

What is Telerobotics?

3 Applications

4 Summary

Exploration

- Scene is mainly perceived by 3D Vision
- visual modality is dominant
- → no haptics
- *but: Material/Surface characteristics missing*
- *Haptic Exploration is needed*
- *Manipulation require a close human-environment interaction*
- *Force-Feedback is evident*
- *to Telerobot and Human Controller*

- Scene is mainly perceived by 3D Vision
- visual modality is dominant
- → no haptics

Applications

Summary

Telepresence

extended human arm

Shared Task

local
sensorfunctions

Shared Autonomy

TeleSensor Programming

Observation of gross commands

Shared Task

- direct 3D Control
- Overlay of Sensor values

Shared Task

- direct 3D Control
- Overlay of Sensor values

Shared Autonomy

- intuitive VR Programming
- Pre-simulation / Task Observation

Shared Task

- direct 3D Control
- Overlay of Sensor values

Shared Autonomy

- intuitive VR Programming
- Pre-simulation / Task Observation

Haptics from world-model enhances presence and performance

Realistic Telepresence

Stability

Transparency

- network description for stability/passivity analysis
- whole system is passive, if all individual blocks are passive
- main problem-source of activity: communication delay

Improved Wave-Variables Scheme (Robotik 2004, Artigas, Preusche et.al.)

Improved Wave-Variables Scheme (Robotik 2004, Artigas, Preusche et.al.)

Time Domain Passivity Control Scheme (IROS 2006, Artigas, Preusche et.al.)

Research Issues

Systems

Telerobots

Haptic Interfaces

Control

Supervisory Control

Bilateral Control

Applications

Summary

Analysis of stable regions for a haptic rendering system

IROS 2006; Hulin, Preusche et.al.

Analysis of stable regions for a haptic rendering system

IROS 2006; Hulin, Preusche et.al.

Passivity is more conservative than stability

→ less transparency

Some Applications are presented from the following fields

- Rescue and Danger
- Surgery
- Maintenance and Manufacturing
- Space

Applications

Summary

- Need for human-like Teleoperators in terms of shape and sensor-actor abilities
- Integration of haptic stimuli (tactile, kinesthetic, proprioceptive) into one handheld device
- Reliable, fast and high-bandwidth communication networks

- **Need for human-like Teleoperators in terms of shape and sensor-actor abilities**
- Integration of haptic stimuli (tactile, kinesthetic, proprioceptive) into one handheld device
- Reliable, fast and high-bandwidth communication networks
