

# Market Prospects of Electric Passenger Vehicles and Their Effect on CO<sub>2</sub> Emissions up to 2030 (*VECTOR21*)

PHEV'09 – Plug-In Hybrid and Electric Vehicles Montreal, Sept. 29, 2009

Introduction German Aerospace Center (DLR)

- ✓ 5.700 employees at 29 research institutes and facilities in 13 locations
- Offices in Brussels, Paris and Washington D.C.
- ✓ 4 main research fields:
  - ✓ Aeronautics
  - → Space
  - → Transport
  - → Energy

### Introduction Motivation and framework

# What are the vehicle technologies and fuels of the future?

- complex system of concurrency / prospects of success unknown
- to be taken into account:
  - technology costs
  - energy prices
  - taxation
  - customer decision process, …
- new computer model for market scenarios up to 2030: VECTOR21

PHEV'09 / Sept. 29, 2009 / slide 3

Overview 3-step approach

- Set up a technology database
- Develop a model to reflect the market
- **3** Apply the model to get to scenarios of the future

Deutsches Zentrum für Luft- und Raumfahrt e.V. in der Helmholtz-Gemeinschaft

PHEV'09 / Sept. 29, 2009 / slide 4

Technology cost and energy consumption assessment Vehicle types currently included in the analysis

- conventional gasoline and gasoline hybrid electric (HEV) vehicles
- conventional diesel and diesel HEV vehicles
- conventional compressed natural gas (CNG) and CNG HEV vehicles
- extended range electric vehicles (EREV)
- battery electric vehicles (BEV)
- fuel cell hybrid electric vehicles (FCHEV)

PHEV'09 / Sept. 29, 2009 / slide 5

# Technology cost and energy consumption assessment Example medium size gasoline vehicle

PHEV'09 / Sept. 29, 2009 / slide 6

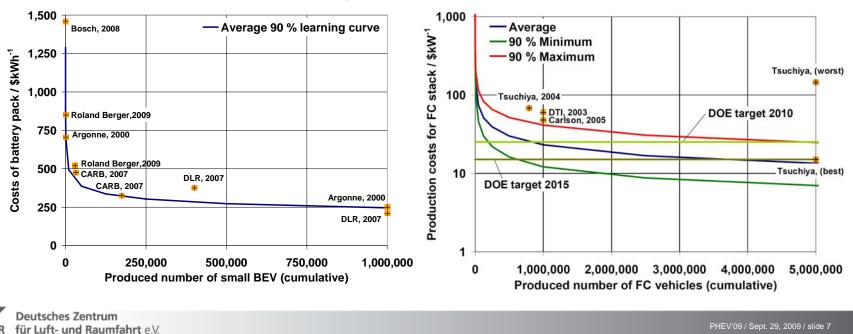

Technology cost and energy consumption assessment Learning curve approach for electric vehicles

#### → Internal combustion engines

- manufacturing costs / retail prices for baseline vehicles
- ✓ individual technical measures summarized into fuel economy packages
- ✓ potential for future fuel economy improvements taken into account

in der Helmholtz-Gemeinschaft

✓ identification of learning curves, costs dependent on production volume

Overview 3-step approach

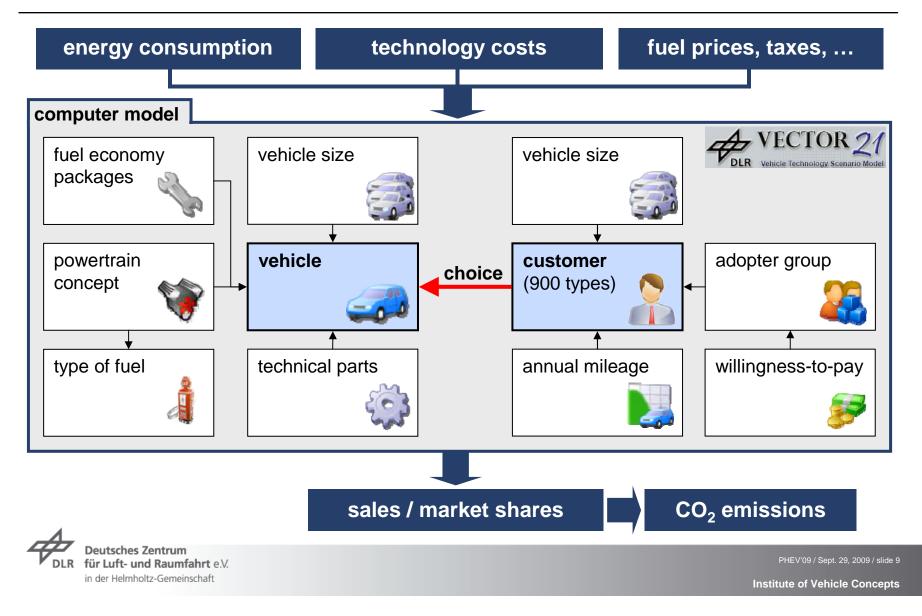

- Set up a technology database ✓
- 2
- Develop a model to reflect the market
- **3** Apply the model to get to scenarios of the future

Deutsches Zentrum für Luft- und Raumfahrt e.V. in der Helmholtz-Gemeinschaft

PHEV'09 / Sept. 29, 2009 / slide 8

# Scenario model (VECTOR21) Modeling technology supply and customer demand

Scenario model (*VECTOR21*) Relevant cost of ownership as main purchase criteria

# Total cost of ownership (TCO) = <u>all</u> costs

# **Relevant cost of ownership (RCO):**

+7%

=	vehicle pri	ice	-	subsidie	es	+	penalt	ies	purchase price
+	vehicle ta	ıx	x	time for break	-even (4	4 years	5)		annual costs
+	fuel costs per km		x	annual mileage		x t	ime for break-	-even	mileage depending costs

	•	↓ ↓		<b>↓</b>	•		•	-	

+1%

0 %

- assumption: purchase decision <u>within</u> vehicle category rational
- basis for decision: relevant cost of ownership (RCO)
- additional willingness-to-pay depending on customer type

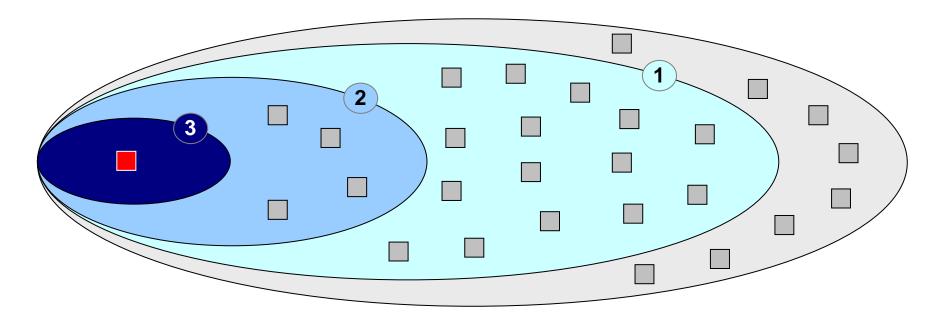

+3%

+ 10 %

# Scenario model (*VECTOR21*) Illustration of selection process

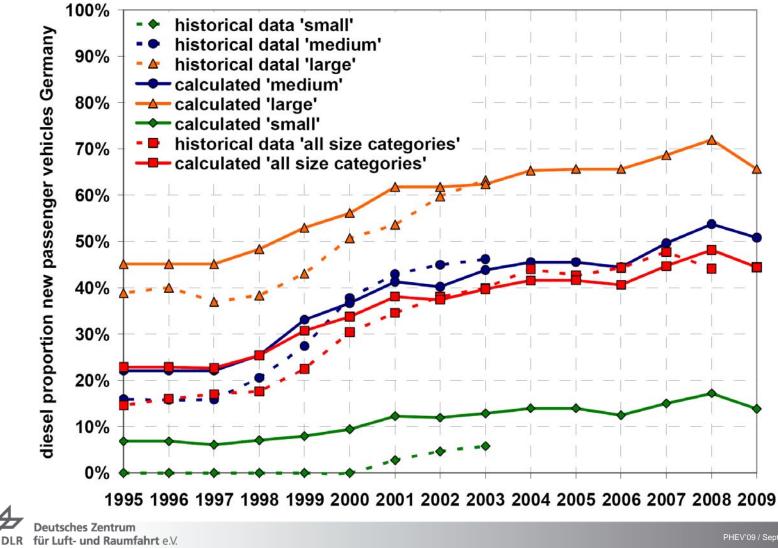

- **vehicle variants** (combination of vehicle technology and fuel)
- 1) step 1: filter for vehicle size category and general compulsory requirements
- 2 step 2: choose lowest Relevant Cost of Ownership (RCO)
  - step 3: choose lowest well-to-wheel CO<sub>2</sub> emissions

Deutsches Zentrum DLR für Luft- und Raumfahrt e.V. in der Helmholtz-Gemeinschaft

PHEV'09 / Sept. 29, 2009 / slide 11

# Scenario model (*VECTOR21*) Model results vs. real historical developments

in der Helmholtz-Gemeinschaft

PHEV'09 / Sept. 29, 2009 / slide 12

Overview 3-step approach

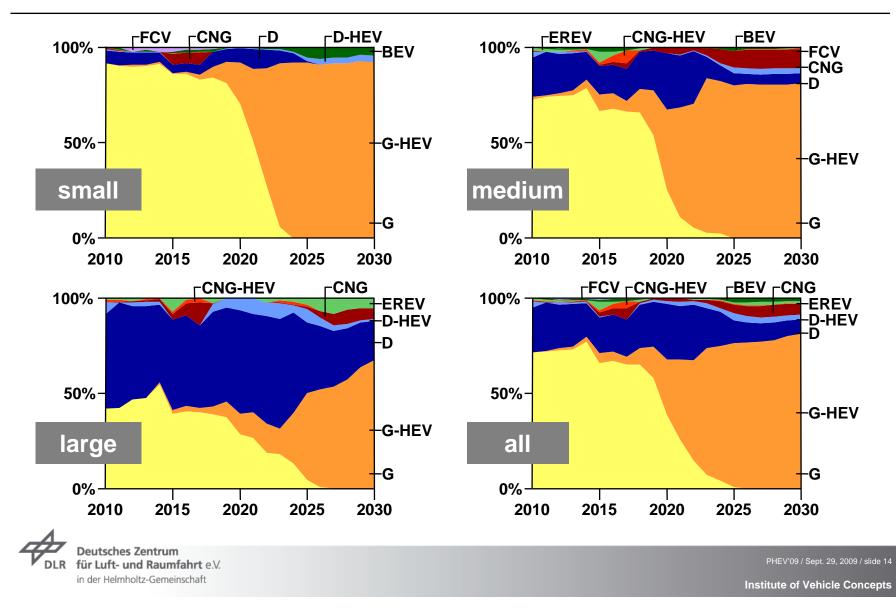

- Set up a technology database ✓
- Develop a model to reflect the market ✓
- 3 Apply the model to get to scenarios of the future

Deutsches Zentrum für Luft- und Raumfahrt e.V. in der Helmholtz-Gemeinschaft

PHEV'09 / Sept. 29, 2009 / slide 13

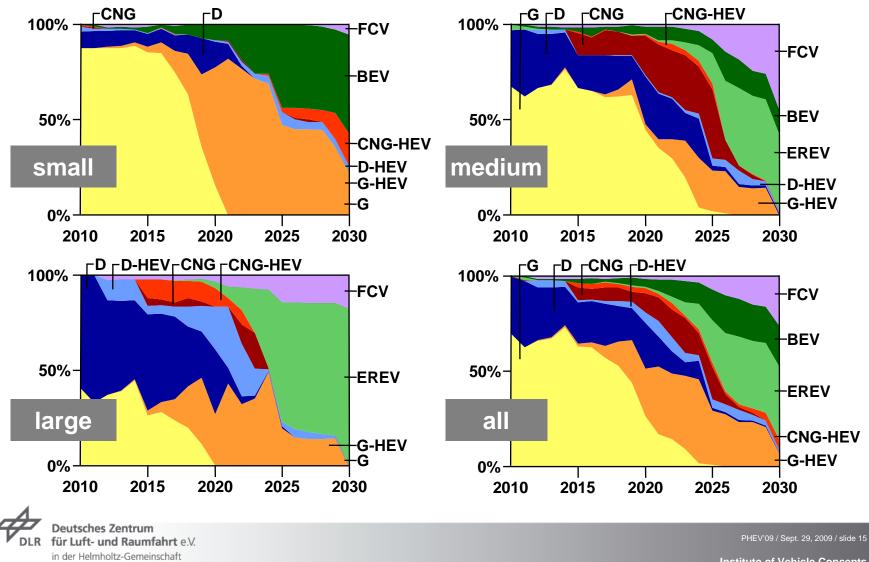

### Scenario calculations Scenario 1 (Baseline) – New vehicle fleet

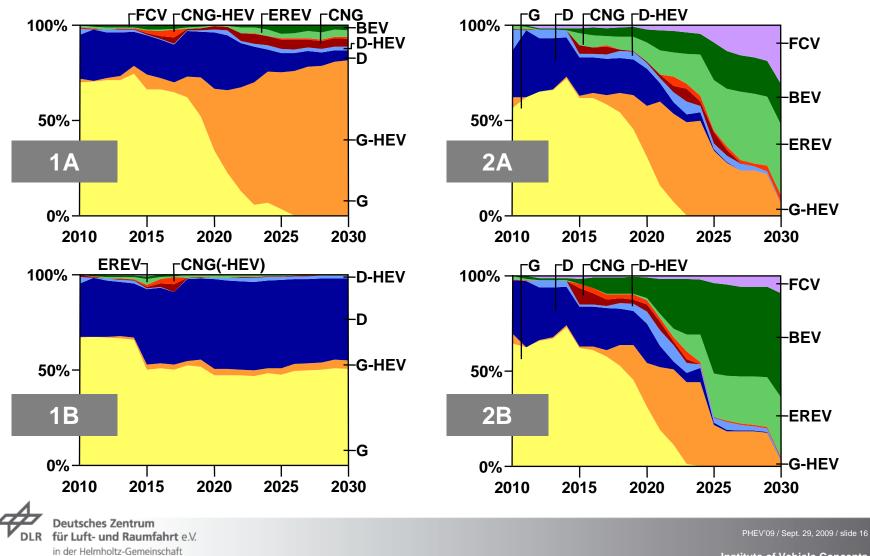

#### Scenario calculations Scenario 2 (Climate Protection) – New vehicle fleet

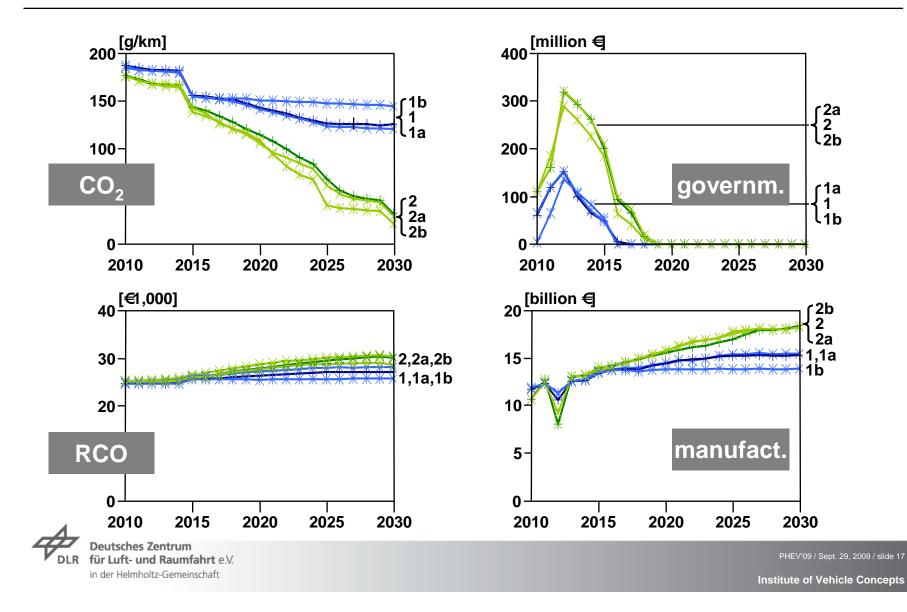

#### Scenario calculations Scenarios A&B – New vehicle fleet (all vehicles)

#### Scenario calculations All scenarios – New vehicle fleet (all vehicles)

# **Conclusion / Outlook**

- ✓ VECTOR21 allows taking into account many influencing factors
- Future market shares of electric vehicles strongly dependent on calculation assumptions:
  - $\neg$  CO<sub>2</sub> target values a key factor
  - ➤ Oil price less significant for customer decision
  - Electricity and hydrogen from renewable sources important for sustainable reduction of CO<sub>2</sub> emissions
- ✓ Recent applications of VECTOR21:
  - analysis carried out for German automotive manufacturer
  - detail analysis carried out for German electricity supplier
  - extended study on behalf of the German Ministry of Economic Affairs
- Expansion of assessment planned for other markets (e.g. China, U.S., Europe) and time horizon (2050), depending on funding and data availability
