

**Land Cover Characteristics and Tree Cover  
Dynamics in the Mekong Basin**  
**Analysing one decade of satellite data**

**Dissertation**  
**zur Erlangung des Doktorgrades**  
**der Mathematisch-Naturwissenschaftlichen Fakultät**  
**der Christian-Albrechts-Universität zu Kiel**

**vorgelegt von**  
**Patrick Leinenkugel**  
**München, 2014**

# Table of contents

Table of contents .....	v
Acknowledgements .....	ix
Zusammenfassung .....	xi
Chinese Summary .....	xiii
Vietnamese Summary .....	xv
English Summary .....	xix
Figures .....	xxi
Tables .....	xxv
Abbreviations and Acronyms .....	xxvii
<b>1 Introduction .....</b>	<b>1</b>
1.1 The need for a regional perspective in transboundary river basins .....	2
1.2 The significance of land cover as an important ecosystem variable .....	3
1.3 The use of moderate-resolution satellite data for environmental analyses .....	4
1.4 Remote sensing based land cover inventories for the Mekong Basin .....	5
1.4.1 Global studies and datasets .....	6
1.4.2 Regional-specific studies .....	7
1.5 Research focus and objectives .....	9
1.6 Structure of the thesis .....	10
1.7 References .....	12
<b>2 Key characteristics of the Mekong Basin .....</b>	<b>19</b>
2.1 Physical units and river course .....	19
2.2 Climate .....	21
2.3 Hydrology .....	23
2.4 Socio-economic characteristics .....	25
2.5 References .....	28
<b>3 Comparison and enhancement of MODIS cloud mask products for Southeast Asia .....</b>	<b>31</b>
3.1 Introduction .....	31
3.2 Study area and data .....	33
3.3 Methods .....	34
3.3.1 Statistics on cloud occurrence for daily MOD09GA data .....	34
3.3.2 Improving cloud mask accuracy .....	35

---

3.3.3	Impacts on 8-day composites .....	38
3.4	Results.....	38
3.4.1	Statistics on cloud occurrence for daily MOD09GA data.....	38
3.4.2	Improved cloud flags .....	43
3.4.3	Impact of cloud masks on 8-day composites .....	45
3.5	Discussion .....	48
3.6	Conclusion.....	50
3.7	References .....	52
<b>4</b>	<b>Characterisation of land surface phenology and land cover based on moderate resolution satellite data in cloud prone areas — A novel product for the Mekong Basin .....</b>	<b>55</b>
4.1	Introduction.....	55
4.2	Study site.....	57
4.3	Materials and methods .....	58
4.3.1	Selection of appropriate base data .....	58
4.3.2	Generation of EVI and reflectance composites.....	59
4.3.3	Time series interpolation and smoothing .....	60
4.3.4	Derivation of phenological metrics .....	62
4.3.5	Classification.....	63
4.3.6	Validation .....	64
4.4	Results.....	67
4.4.1	Phenological characterisation of the Mekong Basin for 2010 .....	67
4.4.2	Land cover characterisation of the Mekong Basin for 2010 .....	69
4.4.3	Qualitative and quantitative comparison of moderate-resolution land cover maps .....	76
4.5	Discussion .....	80
4.5.1	Characterising phenology from MODIS in cloud prone areas .....	80
4.5.2	Land cover classification.....	81
4.6	Conclusions .....	83
4.7	Acknowledgements .....	84
4.8	References .....	85
<b>5</b>	<b>Sensitivity analysis for predicting continuous fields of tree cover and fractional land cover distributions in cloud prone areas .....</b>	<b>91</b>
5.1	Introduction.....	91
5.2	Study area and data .....	93
5.3	Methods.....	94
5.3.1	Generating training data.....	94
5.3.2	Numeric prediction using a regression tree .....	99
5.3.3	Experimental Design .....	100

5.4	Results .....	101
5.4.1	Prediction accuracy for the base case.....	101
5.4.2	The effect of explanatory attribute test sets on prediction accuracy .....	102
5.4.3	The effect of response attribute test sets on prediction accuracy .....	104
5.5	Discussion of the results .....	106
5.5.1	On the prediction of fractional land cover and percent tree cover.....	106
5.5.2	On the effect of phenology and cloud cover on prediction accuracy.....	107
5.5.3	On the quality of the response variable on prediction accuracy.....	109
5.6	Conclusion.....	111
5.7	References.....	112
<b>6</b>	<b>Tree cover and forest cover dynamics in the Mekong Basin from 2001 to 2011 .....</b>	<b>117</b>
6.1	Introduction.....	117
6.2	Study area.....	122
6.3	Data.....	122
6.4	Methods.....	123
6.4.1	Generating training data .....	125
6.4.2	Numeric prediction of canopy cover with the M5 model tree.....	127
6.4.3	Identification and categorisation of tree cover dynamics.....	128
6.5	Results .....	133
6.5.1	Predicted tree cover and forest cover.....	133
6.5.2	Tree cover dynamics between 2001-2011 .....	135
6.6	Discussion.....	140
6.6.1	Comparison with MOD44.....	140
6.6.2	Uncertainties in forest monitoring .....	142
6.6.3	The need for continuous monitoring .....	145
6.7	Conclusion.....	147
6.8	References.....	149
<b>7</b>	<b>The regional pattern of forest cover and its dynamics in the Mekong Basin.....</b>	<b>155</b>
7.1	Introduction.....	155
7.2	Data.....	155
7.3	Methods.....	157
7.4	Results .....	158
7.4.1	Population, land cover, and deforestation at province level .....	158
7.4.2	Hotspot areas of deforestation 1990/2005 and 2001/2011 .....	163
7.4.3	Deforestation, forest accessibility, and forest fragmentation.....	165
7.5	Discussion.....	168

7.5.1	National context of forest use and forest management .....	168
7.5.2	Deforestation, forest accessibility, and forest fragmentation .....	174
7.5.3	Deforestation and development .....	176
7.6	Conclusion .....	178
7.7	References .....	180
<b>8</b>	<b>Synthesis.....</b>	<b>185</b>
8.1	Summary .....	186
8.2	Conclusive findings.....	187
8.3	Future opportunities and challenges with respect to remote-sensing based ecosystem monitoring and land cover system science in the Mekong Basin. ....	194
8.3.1	Opportunities and challenges in remote sensing-based forest monitoring.....	194
8.3.2	The securing of water, food, and energy - future challenges in the Mekong Basin .....	196
8.3.3	From identifying towards understanding LULCC .....	197
8.4	References .....	199
