

Critical Parameters and Control Strategies for Comparable PEFC Stack Characterization

(A0503)

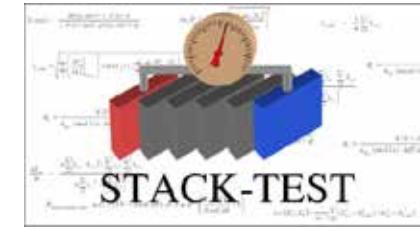

5th European PEFC & H₂ Forum 2015,
30 June – 3 July 2015, Lucerne Switzerland

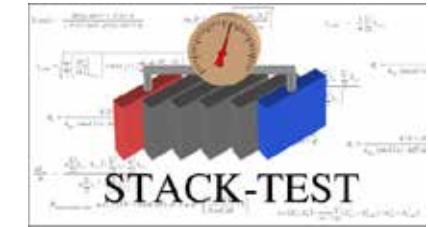

Jens Mitzel, Erich Gültzow, K. Andreas Friedrich

Stack-Test: FCH-JU GA 303445

Overview

- General approach of Stack-Test
 - Test procedures for stack sensitivity
 - Polarization curve measurements
 - Stack performance test programs
 - Application specific test operation conditions
 - Conclusion
-

Conclusion

Focus of test procedures on:

- Critical parameters and stack safety
- Reliability and comparability of test results

→ Sequences from most stable to most critical TOCs

TMs for TIPs influencing the stack performance:

- Stack sensitivity: Impact of one parameter on stack performance
- Polarization Curve: Steady-State curve in 2 h
→ Independent from dwell time and load steps

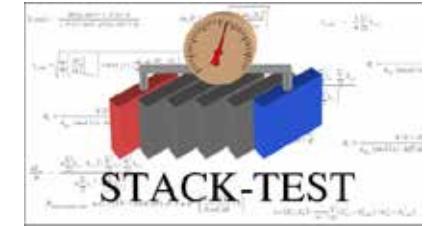

TMs can be combined to different TPs:

- Stack Performance Mapping: Combination of sensitivity TMs

Recommended TOCs for different applications

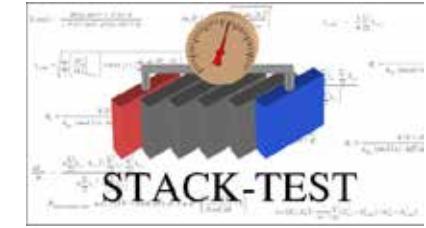

All TM and TP documents can be obtained: stacktest.zsw-bw.de
